 Kathleen Jordan was a vibrant businesswoman, mother and grandmother until one morning in August 2011, she suffered a massive stroke and her world was turned upside. Her memoir *Standing Up!* gives a detailed and compelling insight into the effects of major stroke and the vital support and advocacy needed when she could not stand up for herself. Kathleen Jordan, with Vicki Steggall, recounts her journey through stroke, from the acute trauma, through to the stroke ward, short and long term rehabilitation units and, finally, her amazing recovery to return to semi-normalcy and everyday life. Jordan and Steggall reinforce the powerful role advocacy, family support and determination play in recovery and give specific strategies and advice to families who are feeling under-supported by medical limitations.

The completely revised and only authorized Labs and Study Guide for the Cisco Networking Academy Program CCNA 3 curriculum A portable classroom resource that supports the topics in the CCNA 3 curriculum aligning 1:1 with course modules Includes all the labs in the online curriculum as well as additional instructor-created challenge labs for extended learning and classroom exercises Written by leading Academy instructor Allan Johnson, who brings a fresh voice to the course material The all-new Labs and Study Guide titles combine the best of the former Lab Companions and Engineering Journal and Workbooks with new features to improve the student's hands-on skills and reinforce the topics for each CCNA course. *Switching Basics and Intermediate Routing CCNA 3 Labs and Study Guide* is a complete collection of the lab exercises specifically written for the CCNA 3 course in the Cisco Networking Academy Program, designed to give students hands-on experience in a particular concept or technology. Each lab contains an introductory overview, a preparation/tools required section, explanations of commands, and step-by-step instructions to reinforce the concepts introduced in the online course and covered in the Companion Guide. NEW: Challenge labs written by Academy instructors, tested in their classrooms will be included as additional or alternative labs. The Study Guide section is designed to provide additional exercises and activities to reinforce students' understanding of the course topics, preparing them for the course assessments. As a study guide it will also continue to provide ample writing opportunities to guide students into the habit of keeping notes on networking topics.

A practical, fast-paced guide that gives you all the information you need to successfully create networks and simulate them using Packet Tracer. Packet Tracer Network Simulator is aimed at students, instructors, and network administrators who wish to use this simulator to learn how to perform networking instead of investing in expensive, specialized hardware. This book assumes that you have a good amount of Cisco networking knowledge, and it will focus more on Packet Tracer rather than networking.

Lakeland, the historical African American community of College Park, was formed around 1890 on the doorstep of the Maryland Agricultural College, now the University of Maryland, in northern Prince

George's County. Located less than 10 miles from Washington, D.C., the community began when the area was largely rural and overwhelmingly populated by European Americans. Lakeland is one of several small, African American communities along the U.S. Route 1 corridor between Washington, D.C., and Laurel, Maryland. With Lakeland's central geographic location and easy access to train and trolley transportation, it became a natural gathering place for African American social and recreational activities, and it thrived until its self-contained uniqueness was undermined by the federal government's urban renewal program and by societal change. The story of Lakeland is the tale of a community that was established and flourished in a segregated society and developed its own institutions and traditions, including the area's only high school for African Americans, built in 1928.

Cisco's IT Essentials: PC Hardware and Software curriculum introduces the skills needed to help meet growing demand for entry-level information and communication technology (ICT) professionals. It covers the fundamentals of PC technology, networking, and security, and also introduces advanced concepts. While extensive online study resources are available, many have requested a low-cost printed resource for study offline. This booklet is that resource. Drawn directly from the online curriculum, it covers every skill and competency required by the new A+ exams (220-801 and 220-802): \* Define IT and describe a computer's components \* Protect self, equipment, and the environment \* Assemble a desktop computer step-by-step, and install and navigate an operating system \* Explain and perform preventive maintenance and basic troubleshooting \* Upgrade or replace components of laptops and peripherals \* Connect computers to networks \* Implement basic security \* Communicate well and behave professionally \* Assess customer needs, analyze possible configurations, and recommend solutions This booklet enables students to study offline, highlight key points, and take handwritten notes. Its text is extracted word-for-word, from the online course, and headings with exact page correlations link to the online course for classroom discussions and exam preparation. Icons direct readers to the online Cisco Networking Academy curriculum to take full advantage of the images, labs, and activities provided there.

What is this book about? PHP, Apache, and MySQL are the three key open source technologies that form the basis for most active Web servers. This book takes you step-by-step through understanding each — using it and combining it with the other two on both Linux and Windows servers. This book guides you through creating your own sites using the open source AMP model. You discover how to install PHP, Apache, and MySQL. Then you create PHP Web pages, including database management and security. Finally, you discover how to integrate your work with e-commerce and other technologies. By building different types of Web sites, you progress from setting up simple database tables to tapping the full potential of PHP, Apache, and MySQL. When you're finished, you will be able to create well-designed, dynamic Web sites using open source tools. What does this book cover? Here's what you will learn from this book: How PHP server-side scripting language works for connecting HTML-based Web pages to a backend database Syntax, functions, and commands for PHP, Apache, and MySQL Methods and techniques for building user-friendly forms How to easily store, update, and access information using MySQL Ways to allow the user to edit a database E-commerce applications using these three technologies How to set up user logins, profiles, and personalizations Proper protocols for error handling Who is this book for? This book is for beginners who are new to PHP and who need to learn quickly how to create Web sites using open source tools. Some basic HTML knowledge is helpful but not essential.

Visible light communication (VLC) is an evolving communication technology for short-range applications. Exploiting recent advances in the development of high-power visible-light emitting

LEDs, VLC offers an energy-efficient, clean alternative to RF technology, enabling the development of optical wireless communication systems that make use of existing lighting infrastructure. Drawing on the expertise of leading researchers from across the world, this concise book sets out the theoretical principles of VLC, and outlines key applications of this cutting-edge technology. Providing insight into modulation techniques, positioning and communication, synchronisation, and industry standards, as well as techniques for improving network performance, this is an invaluable resource for graduate students and researchers in the fields of visible light communication, optical wireless communication, and industrial practitioners in the field of telecommunications.

After leaving the Service, ex SAS Sergeant Ben Nash took up a Ski Instructors' Position at a Victorian Ski Resort mainly for fun but also because of his love of the mountains. The story starts during his service in Afghanistan and that sets the scene for a chain of events that will follow him to his home in the Gold Coast Hinterland and beyond... He is approached by executives from an electronics company to locate their CEO who has gone missing on a trade mission to Moscow. Ben's experience in the SAS, and a previous mission within Russia, makes him the ideal candidate for the task. However, friends are not always who they seem to be and the past soon begins to catch up with him. Eventually Ben finds out who his real friends are.
