The Asante World provides fresh
perspectives on the Asante, the largest

Akan group in Southern Ghana, and what new scholars are thinking and writing about the "world the Asante made." By employing a thematic approach, the volume interrogates several dimensions of Asante history including state formation, Asante-Ahafo and Bassari-Dagomba relations in the context of

Asante northward expansion, and the expansion to the south. It examines the role of Islam which, although extremely intense for just a short time, had important ramifications. Together the essays excavate key aspects of Asante political economy and culture, exemplified in kola nut production, the kente/adinkra cloth types and their associated symbols, proverbs, and drum language. The Asante World explores the Asante origins of Jamaican maroons, Asante secular government, contemporary politics of progress, governance through the institution of Ahemaa or Queenmothers, epidemiology and disease, and education in the twentieth and twenty-first centuries. Featuring innovative and insightful contributions from leading historians of

the Asante world, this volume is essential reading for advanced undergraduates, postgraduates, and scholars concerned with African Studies, African diaspora history, the history of Ghana and the Gold Coast, the history of Islam in Africa, and Asante history.

The prominent idea of sustainable development has influenced almost all disciplines, changing our understanding and behavior toward sustainability. In this respect, marketing has also been transforming from the sustainability point of view as emerging social and ecological problems caused by the exponential growth require sustainable

solutions and joint efforts. Sustainable marketing intends to integrate ecological, social, and ethical concerns while creating value. Consumers, along with other stakeholders, expect that brands will contribute to work toward the sustainable development goals; therefore, companies need to redesign their marketing initiatives to create, promote, and deliver values that are in line with sustainability. The Handbook of Research on Achieving Sustainable Development Goals With Sustainable Marketing illuminates current developments in sustainable marketing and the new trends and tendencies concerning the concept in theory and practice. The book also explores the concept of sustainable marketing in today's context of the digital age,

explains its boundaries and benefits, and describes the challenges and opportunities as well as the advantages and potential disadvantages of sustainable marketing and branding efforts. Covering key topics such as branding, marketing ethics, and corporate social responsibility, this premier reference source is ideal for marketers, business owners, managers, industry professionals, researchers, academicians, scholars, practitioners, instructors, and students.

Economics and Political Implications of International Financial Reporting Standards focuses on the consequences and determinants of the adoption of the International Financial Reporting Standard (IFRS), which has remained a top issue in International Accounting. This timely publication brings to the forefront issues related to the political and economic influences and impacts of IFRS in addition to providing a platform for further research in this area. One of the most important activities of enterprises today is responsible entrepreneurship. Corporate social responsibility (CSR) activities can help to forge a stronger bond between employees and corporations, can boost morale, and can help both employees and employers feel more connected with the world around them. Moreover, the growing importance of this concept results from the fact that it is perceived as an effective tool for increasing

competitiveness, improving the image of the company, or contributing to the generation of higher profits. In today's world, an active commitment to social responsibility is becoming more common for a company. CSR and Socially Responsible Investing Strategies in Transitioning and Emerging Economies is an essential reference source that identifies the scale and scope of implementation of CSR and socially responsible investing strategies and standards in companies operating in different transitioning and emerging economies as well as assessing the global effects of these activities. Featuring research on topics such as economic growth, responsible investing, and business ethics, this book is ideally designed for managers, executives,

directors, corporate professionals, government officials, industry leaders, academicians, students, and researchers in the fields of international economics, international business, marketing, finance management, and public relations.

Drawing on insights from across Africa, this book investigates the discourses and practices that guide doctoral training today. Higher education is regarded as key for driving development and innovation, creating an informed knowledge base equipped to tackle local and global challenges. For too long external forces defined education in the continent, but now African countries are revitalising higher education, designing doctoral training to fit distinctly African needs and contexts. This book investigates the history, present and future potential of doctoral training on international, regional, national and institutional levels. Bringing together

expertise from both research and practice, the book analyses the frameworks and structures of the doctoral phase, and how institutions, supervisors, mentors and young scholars meet the challenges of training in real life. The book covers issues such as access to education, proactive recruitment, funding issues, practitioner expertise, enrolment and drop-out, across a range of countries including South Africa, Mozambique, Ethiopia, Nigeria, Benin, Ghana and Morocco. This book will be a rich resource for higher education administrators and policy makers, as well as researchers and academics with an interest in higher education in Africa.

The literature on innovation in Africa is rapidly expanding, and a recurring thread in the emergent literature is the pervasiveness of systemic weaknesses that inhibit the innovation process. Despite these, firms are able to innovate in Africa. It is then logical to ask: how do African firms manage to overcome the prevalent constraints and learn to innovate? This book directly tackles this question, with a view to improving our understanding of the innovation landscape in Africa. The book brings together some of the latest innovation research from across the African continent, ranging from Tanzania and Ethiopia in the east to Nigeria in the west. The chapters included in the collection adopt different but

complementary theoretical and methodological approaches to address a rich mix of interrelated issues. These issues include the factors that enhance or inhibit innovation in African firms, the sources of (knowledge/information for) innovation, policy options for overcoming constraints and facilitating firm-level innovation, the nature and roles of brokers and intermediaries in dealing with innovation constraints and in facilitating the innovation process and the role of interactive learning and acquisition of embodied technology in the innovation process. This book was originally published as a special issue of *Innovation and Development*. UNESCO Science Report IGI Global Corporate social responsibility now touches upon most aspects of the

interaction between business and society. The approaches taken to research in this area are as varied as the topics that are researched; yet this is the first book to address the whole range of methods available. The book identifies the methods available, evaluates their use and discusses the circumstances in which they might be appropriate. It also includes forward-thinking guidance from experienced academics on the future directions of research in the area.

"Academic identities research is a growing area of scholarly enquiry especially as academics themselves question the evolving nature of their roles in rapidly-changing university environments. Performative frameworks

in many countries around the world reflect these changes and this volume brings a number of disciplinary perspectives to bear on how we understand the lived experiences of academic life in a global context. Contributors explore the power of conceptual tools drawn from Philosophy, Psychology, Sociology and Politics to challenge increasingly instrumental neoliberal political approaches to higher education, supported by empirical evidence. Worthwhile teaching, learning and research require significant personal investment, and the book pays particular attention to the deeply affective dimensions of current academic practices. In Part One, tools to conceptualise academic identity-work drawn from foundational academic

disciplines are applied to contemporary higher education practices. Part Two foregrounds how working in universities today proceeds, with a particular focus on how academics respond to the multiplicity of institutional demands. The most pressing perceived demand, supported by contributions in Part Three, is publication: the need to be 'visible' to 'count' is now a global imperative, with the affective dimensions not yet well-understood at policy level. In Part Four, those who support colleagues negotiating a reconfigured academic terrain explore productive approaches towards this task to ensure that academic practice remains rooted in the values previously outlined. This book will be of interest to those working in universities globally who seek a deeper

appreciation of the contextual drivers that shape academic work."

This book reflects on the rapid rise of social media across the African continent and the legal and extra-legal efforts governments have invented to try to contain it. The relentless growth of social media platforms in Africa has provided the means of resistance, self-expression, and national self-fashioning for the continent's restlessly energetic and contagiously creative youth. This has provided a profound challenge to the African "gatekeeper state", which has often responded with strategies to constrict and constrain the rhetorical

luxuriance of the social media and digital sphere. Drawing on cases from across the continent, contributors explore the form and nature of social media and government censorship, often via antisocial media laws, or less overt tactics such as state cybersurveillance, spyware attacks on social media activists, or the artful deployment of the rhetoric of "fake news" as a smokescreen to muzzle critical voices. The book also reflects on the Chinese influence in African governments' clampdown on social media and the role of Israeli NSO Group Technologies, as well as the tactics and technologies which activists and users are deploying to resist or circumvent social media censorship. Drawing on a range of methodologies and disciplinary

approaches, this book will be an important contribution to researchers with an interest in social media activism, digital rebellion, discursive democracy in transitional societies, censorship on the Internet, and Africa more broadly.

Handbook on ICT in Developing Countries: Next Generation ICT Technologies is the second volume of the Handbook of ICT in Developing Countries. The first volume was on the potential implementation and service delivery of the forth-coming 5G networks. Here the focus is on the new technologies and services enabled by 5G networks or broadband Internet networks including artificial Intelligence (AI), machine learning, augmented reality, Internet of Things (IoT),

autonomous driving, blockchain solutions, cloud solutions etc. Some of these are already globally experiencing growth in the existing networks and all of them are expected to grow substantially in the future. Examples: currently, 5% of global organizations have fully adopted AI, but the penetration is expected to increase rapidly before 2025. IoT with 20.35 billion devices connected in 2017 is estimated to show 75.44 billion devices connected in 2025. The expected growth is based on delivering of new value to businesses and citizens. It is, however, not obvious that this growth will also occur in developing countries. Currently, the digital divide between developing countries and developed countries is widening. This is mostly due to the lack

of infrastructure and low level of awareness by the businesses and citizens of the value made possible by the new technologies for developing countries. The book discusses the potentials of the new technologies for developing countries and the need for market interventions that will facilitate the demand and supply side of the market. It is designed for a broad audience including practitioners, researchers, academics, policy makers and industry players and influencers. The language and approach to the handbook is a combination of the academic writing style and professional reviews.

CSR and Socially Responsible Investing Strategies in Transitioning and Emerging Economies Edward Elgar Publishing

For hundreds of years, different leadership theories have been explored to try to explain exactly how and why certain people become great leaders. Research spans a discussion of personality traits, the characteristics of the situation at hand, and qualifications of the leader to try to determine what causes people to become more likely than others to take charge. This can be in various settings: CEOs, presidents and prime ministers, managing directors, governors, senators, head coaches, and more. Through the examination of first-time leadership, new theories and ideas on leadership are explored. The Handbook of Research on Innate Leadership Characteristics and Examinations of Successful First-Time Leaders is a comprehensive reference

source that focuses on what qualities distinguish first-time leadership from traditional leaders, while furthering leadership theories that look at other variables such as situational factors, knowledge base, skill levels, etc. It reviews the various approaches used by first-time leadership and how each of them uniquely approaches effective leadership, key outcomes, and the strengths and weaknesses of each approach. Furthermore, it distinguishes between the traditional route for leadership, the gradual moving up of an individual over time to higher positions, and a first-time leadership in which an individual begins right away in a position without climbing the professional ladder. This book will attempt to draw lessons from existing first-time leadership

experience and provide evidence for the appropriateness of such a route to leadership. Topics highlighted include transformational leadership, political leaders, ethical and unethical leadership, and leadership development. This book is ideal for young professionals, leaders, executives, managers, graduate students, practitioners, government officials, researchers, academicians, and students.

The Asante World Taylor & Francis Technology provides accessibility otherwise unavailable to the people who can benefit from it the most. The Handbook of Research on Managing Information Systems in Developing Economies is a pivotal reference source that explores the effects of technological data handling within developing economies. Covering a broad range of topics such as emerging digital technologies, socio-economic development, and technology startups, this book is ideally designed for software programmers, policymakers, practitioners, educators, academicians, students, and researchers.
