In this book, first published in 1990, Edgard Sienaert and Richard Whitaker offer the first English translation of Marcel Jousse's crucially important work, *Le style oral*. As the translators observe, this study fired the imagination of contemporary intellectuals in Paris soon after its publication and influenced the work of

many. In this book, Jousse provides a thorough and detailed theoretical account of the compositional style of oral, as opposed to literate, authors, showing that the antithetical, balancing, formulaic quality of that style is deeply rooted in the psychological and even physiological nature of mankind.

Providing comprehensive information on all the systems of the human body, this reference blends scientific data with practical knowledge to address issues in medical surgical nursing, including a summary of specific conditions, nursing diagnoses, and nursing interventions. With content that has been carefully selected to build on existing nursing knowledge, this text also provides guidance on topics such as a nurse's role in the management of

patients and clients with medical or surgical problems; the role of the nurse as a primary caregiver, educator, adviser, and advocate of patients' rights; and suggestions to enhance the patient/nurse relationship.

Zulu plant names do not just identify plants, they tell us much more about the plant, as well as how it is perceived or used in Zulu culture. For example, the plant name umhlulambazo ('what defeats the axe') tells us that this is a tree with hard, dense wood, and that usondelangange ('come closer so I can embrace you') is a tree with large thorns that snags the passer-by. In a similar vein, both umakuphole ('let it cool down') and icishamlilo ('put out the fire') refer to plants that are used medicinally to treat fevers and inflammations. Plants used as the base of love-charms have names that are particularly colorful, such as unginakile ('she has noticed me'), uvelabahleke ('appear and they smile'), and the wonderfully named ungcingci-wafika-umntakwethu ('how happy I am that you have arrived, my sweetheart!'). And then, there are those plant names that are just plain intriguing, if not mystifying: umakhandakansele ('the heads of Mr Ratel'), isandlasonwabu ('hand of a chameleon'), intombikayibhinci ('the girl does not wear clothes'), and ukhuningomile ('piece of firewood, I am thirsty'). This book details the complex relationship between these plants, the Zulu language, and Zulu culture. [Subject: Botany, African Studies, Cultural Studies, Language]

Tom likes fooling around and is rather good at it, much to the annoyance of his Aunt Fidget Wonkham-Strong. So one day this fearsome lady decides to teach Tom a lesson and summons Captain Najork and his Hired Sportsmen to play womble, muck and sneedball. Can it possibly end well for all concerned?

The Auxiliary Nurse Human & Rosseau
The basics of fundamental and general nursing science are presented in this health resource for auxiliary, enrolled, and registered general nurses. A strong community nursing focus infuses the outcome-based teachings and questions to stimulate further discussion. Practical information on nursing in South Africa is provided, including working in the legal framework, managing the challenges of nursing in a culturally diverse society, and dealing with patients suffering from HIV and AIDS. Medical teachings on the use of

oxygen, temperature regulation, mobility, and skin integrity complement the ethical discussions.

A major component of many modern human anatomy programs is commemorating people who have donated their body for education and research. In addition, some institutions have also organized memorial places to honor the body donors. This book is an edited volume which explores the phenomena of commemorations and memorials in anatomy. It includes both descriptive papers focusing on the content of the ceremonies and theoretical papers contextualizing and examining these within the broader ethical, scientific, medical and educational frameworks. Building up on the idea of a community of practice, the main objective of the volume is to enhance the exchange of ideas and sharing of experiences. The concepts of 'commemoration' and 'memorial' in anatomy programs are presented as emerging. They are seen as phenomena that will continue to evolve and ramify within different cultural and educational contexts, and this volume is expected to facilitate these processes. Indeed, meager literature on the topic indicates potentially enormous practical value in sharing and combining practices from different cultural and teaching/research traditions.

The Ebola Epidemic in West Africa
Passbooks Study Guide

The most recent Ebola epidemic that began in late 2013 alerted the entire world to the gaps in infectious disease emergency preparedness and response. The regional outbreak that progressed to a significant public health emergency of international concern (PHEIC) in a matter of months killed 11,310 and infected more than 28,616. While this outbreak bears some unique distinctions to past outbreaks, many characteristics remain the same and contributed to tragic loss of human life and unnecessary expenditure of capital: insufficient knowledge of the disease, its reservoirs, and its transmission; delayed prevention efforts and treatment; poor control of the disease in hospital settings; and inadequate community and international responses. Recognizing the opportunity to learn from the countless lessons of this epidemic, the National Academies of Sciences, Engineering, and Medicine convened a workshop in March 2015 to discuss the challenges to successful outbreak responses at the scientific, clinical, and global health levels. Workshop participants explored the epidemic from multiple perspectives, identified important questions about Ebola that remained unanswered, and sought to apply this understanding to the broad challenges posed by Ebola and other emerging pathogens, to prevent the international community from being taken by surprise once again in the face of these threats. This publication summarizes the presentations and discussions from the workshop.

This comprehensive management manual brings together a holistic philosophy of health care, an overview of good business practices, and guidelines for compliance to national and international hospital accreditation standards. Chapters cover conceptual frameworks for health service delivery, strategic planning, good governance, financial management, human resource management, and continuous quality improvement. The philosophy of Ubuntu, the African notion that everyone in a community is responsible for the welfare of its members, is also discussed as a necessary consideration in all health care decisions.
