Summer HarperCollins UK

From two scientists who have been at the forefront of manatee research for over three decades, The Florida Manatee offers an engaging, accessible introduction to manatee biology, including communication, diet, long-distance migration, and much more. This second edition is updated with new scientific research, as well as discussions of recent conservation efforts—largely driven by manatee injuries and deaths resulting from boat collisions—that have contributed to the robust growth of manatee numbers in Florida. It also includes the latest predictions for manatee populations and health in the future, both in Florida and worldwide. This is the perfect book for anyone seeking the most comprehensive, current information on this fascinating marine mammal.

Today more than ever Marxism is profoundly in need of a full and precise modern reappraisal. In his belief that this may only be accomplished along with an examination of the "humanistic" young Marx, Adam Schaff presents in this volume an illumination of the thinker's early work and its relationship to the world-shaking economic philosophy that stemmed from it.

India's history and culture is ancient and dynamic, spanning back to the beginning of human civilization. Beginning with a mysterious culture along the Indus River and in farming communities in the southern lands of India, the history of India is punctuated by constant integration with migrating peoples and with the diverse cultures that surround the country. Placed in the center of Asia, history in India is a crossroads of cultures from China to Europe, as well as the most significant Asian connection with the cultures of Africa. The Historical Dictionary of Ancient India provides information ranging from the earliest Paleolithic cultures in the Indian subcontinent to 1000 CE. The ancient history of this country is related in this book through a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on rulers, bureaucrats, ancient societies, religion, gods, and philosophical ideas.

This book focuses on the progress in modern energy processes, systems and equipment. Since the beginning of humankind, energy has been the most important need for each human and living being. Thus, the development of different ways of energy conversion that can be applied to cover growing energy needs has become a crucial challenge for scientists and engineers around the world, making the power industry, in which operation is based on subsequent energy conversion processes, one of the most important fields of the local, national, and global economy today. Progress in precise description, modeling, and optimization of physical phenomena related to the energy conversion processes bounded to large and dispersed power systems is a key research and development field of the economy.

This book provides a comprehensive and readable account of the American system of controlling the private use of land -- the public control of private development. It explains the general, social, legal, and political context and the historical origin of these controls. It provides a technical description of the main methods (zoning and subdivision control) and identifies recent innovations in technique. The objectives of control and its effectiveness are considered, and some parallels with British experience are explored. In a final chapter, "Retrospect and Prospect -- 1969," written especially for this new edition, developments of the past ten years and prospects for the future are discussed. The book is intended to provide an introduction to the subject for all those whose work or studies require some acquaintance with land-use controls -- students of planning, law, social administration, and politics; professional planners, zoning lawyers; elected representatives. It is also intended to provide the foreign visitor or observer with a clear account of American methods of land-use control and a general introduction to the American planning scene. There is no other book that deals with this subject in a similar way. There are legal textbooks that record the case law in excessive detail, and there are planning textbooks that deal with the techniques in an uncritical way, unrelated to the historical, political, and administrative context.

This edited collection applies kinship as an analytical concept to better understand the affective economies, discursive practices, and aesthetic dimensions through which cultural narratives of belonging establish a sense of intimacy and affiliation. In North American and European ethnic literatures, kinship has several social functions: negotiating diasporic belonging in and outside of the perimeters of bloodlines and genealogy; positioning queer-feminist interventions to counter ethno-nationalist narratives of belonging; challenging liberal sentimentalist narratives, such as those grafted onto the bodies of transnational adoptees; re-formulating cultural heterogeneity through interracial and interethnic kinship constellations outside either post-racial assumptions about colorblindness or celebrations of racial and ethnic pluralism. In all of these cases, kinship features as a common theme through which contemporary authors attend to challenges of conscribing individuals into inclusive, counter-hegemonic cultural narratives of belonging.

African agriculture is currently at a crossroads, at which persistent food shortages are compounded by threats from climate change. But, as this book argues, Africa can feed itself in a generation and can help contribute to global food security. To achieve this Africa has to define agriculture as a force in economic growth by advancing scientific and technological research, investing in infrastructure, fostering higher technical training, and creating regional markets.

Can a loner vampire and outcast wolf find love in Lori Devoti's Moon Rising? The discovery of lost treasure imperils the fragile peace between the vampire and werewolf populations. Especially when werewolf Cece Parks and vampire Marc Delacroix arrive at the remote site with the same agenda--to claim the loot. But when suspicious deaths begin occurring, the enemies must band together to solve the mystery. The truth proves far more complicated than either can imagine. Especially when Marc finds himself inexplicably drawn to Cece. For once in his long life he wants nothing more than to be with--and protect--the werewolf. Now loyalty to his race and his forbidden desire are about to collide....

In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.
