TESSA JACOB

The Body Keeps the Score Guilford Publications
 Winner of the 2019 National Parenting Product Award Ranked #1 by BookAuthority for 2019 Best New Parenting Books Your child's DNA is not destiny; you are at the helm, guiding their course. The truth is, nature and nurture are in a delicate dance—if one goes too fast, the other one falls. Science tells us that early childhood experiences have the capacity to structure and alter the brain. That means you didn't just supply your child's DNA—you're still shaping it. And it's only by wielding this power that your child will activate their full potential. You are truly a gene therapist; manipulating and guiding your child's genetic makeup based on the experiences you create for them. Contrary to what modern parenting trends have told us, parenting is much simpler than we dared to imagine. Great parenting comes down to one mission: to be prepped and present for the windows of your child's development so that you can take full advantage of them and help your child become a smart, successful, self-sufficient adult. It doesn't require formal training or a fancy degree—all it takes is getting involved. Once parents learn how to flip the right gene "switches," they can expand the limits of their child's potential and lay the emotional and intellectual groundwork that allows them to seize opportunities for success fearlessly, naturally, and enthusiastically. With a PhD. in education and a second in psychology, and forty years of experience as an educator, Dr. Gross combines an understanding of childhood development with practical and realistic tools to teach parents how to best take advantage of their child's developmental windows. *How to Build Your Baby's Brain* translates the results from scientific studies about expanding consciousness and performance into day-to-day interaction between parents and children.

Mom Genes Pear Press

Professor Mommy is designed as a guide for women who want to combine the life of the mind with the joys of motherhood. The book provides practical suggestions from the authors' experiences together with those of other women who have successfully combined parenting with professorships. *Professor Mommy* addresses key questions—when to have children and how many, what kinds of academic institutions are the most family friendly, how to negotiate around the myths that many people hold about academic life, etc.—for women throughout all stages of their academic careers, from graduate school through full professor. The authors follow the demands of motherhood all the way from the infant stages through the empty nest. At each stage, the authors offer invaluable advice and tested strategies

from women who have successfully juggled the demands and rewards of an academic career and motherhood. Written in clear, jargon-free prose, the book is accessible to women in all disciplines, with concise chapters for the time-constrained academic. The book's conversational tone is supplemented with a review of the most current scholarship on work/family balance and a survey of emerging family-friendly practices at U.S. colleges and universities. *Professor Mommy* asserts that the faculty mother has become and will remain a permanent fixture on the landscape of the American academy. The paperback edition features a new Preface that addresses the public conversation about mothers and work raised in Sheryl Sandberg's *Lean In* and Ann Marie Slaughter's *Why Women Still Can't Have it All*. The new Preface also answers frequently asked questions from readers.

When He's Married to Mom Guilford Publications

It's about time we made motherhood more diverse... When Candice fell pregnant and stepped into the motherhood playing field, she found her experience bore little resemblance to the glossy magazine photos of women in horizontal stripe tops and the pinned discussions on mumsnet about what pushchair to buy. Leafing through the piles of prenatal paraphernalia, she found herself wondering: "Where are all the black mothers?". Candice started blogging about motherhood in 2016 after making the simple but powerful observation that the way motherhood is portrayed in the British media is wholly unrepresentative of our society at large. The result is this thought-provoking, urgent and inspirational guide to life as a black mother. It explores the various stages in between pregnancy and waving your child off at the gates of primary school, while facing hurdles such as white privilege, racial micro-aggression and unconscious bias at every point. Candice does so with her trademark sense of humour and refreshing straight-talking, and the result is a call-to-arms that will allow mums like her to take control, scrapping the parenting rulebook to mother their own way.

Mom Brain National Academies Press

From the creator of the popular website *Ask a Manager* and New York's work-advice columnist comes a witty, practical guide to 200 difficult professional conversations—featuring all-new advice! There's a reason Alison Green has been called "the Dear Abby of the work world." Ten years as a workplace-advice columnist have taught her that people avoid awkward conversations in the office because they simply don't know what to say. Thankfully, Green does—and in this incredibly helpful book, she tackles the tough discussions you may need to have during your career. You'll learn what to say when • coworkers push their work on you—then take credit for it • you accidentally trash-talk someone in an email then hit "reply all" • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems

unhappy with your work • your cubemate's loud speakerphone is making you homicidal • you got drunk at the holiday party Praise for *Ask a Manager* "A must-read for anyone who works . . . [Alison Green's] advice boils down to the idea that you should be professional (even when others are not) and that communicating in a straightforward manner with candor and kindness will get you far, no matter where you work."—Booklist (starred review) "The author's friendly, warm, no-nonsense writing is a pleasure to read, and her advice can be widely applied to relationships in all areas of readers' lives. Ideal for anyone new to the job market or new to management, or anyone hoping to improve their work experience."—Library Journal (starred review) "I am a huge fan of Alison Green's *Ask a Manager* column. This book is even better. It teaches us how to deal with many of the most vexing big and little problems in our workplaces—and to do so with grace, confidence, and a sense of humor."—Robert Sutton, Stanford professor and author of *The No Asshole Rule* and *The Asshole Survival Guide* "Ask a Manager is the ultimate playbook for navigating the traditional workforce in a diplomatic but firm way."—Erin Lowry, author of *Broke Millennial: Stop Scraping By and Get Your Financial Life Together*

The Better Brain Book Seal Press

This book is a comprehensive grade-by-grade guide through the elementary school years, filled with practical tools, smart advice, and fun activities that will boost your child's brainpower, social skills, and love for learning.

Ask a Manager Penguin Books

"All new moms should shove a copy of *The Kids Are in Bed* in the diaper bag between the asswipes and Aquaphor! A perfect guide on how-to not morph solely into someone's mom and retain your badassery in a world of Disneyfication and baby sharks." —Jill Kargman, author of *Sprinkle Glitter on My Grave* and creator of *Odd Mom Out Picture It*—it's 8:30 p.m. You close the door to your child's room just as you hear your partner closing the dishwasher, and now it's time for an hour or two of glorious freedom. What do you do? Read the book you've been waiting to crack open all day? Chat on the phone with a friend, glass of wine in hand, or go out with pals and share a whole bottle? Or, like many modern parents, do you get caught up in chores, busywork, and social media black holes? In an original survey conducted for this book, 71 percent of parents said their free time didn't feel free at all, because they were still thinking about all the things they should be doing for their kids, their jobs, and their households. Rachel Bertsche found herself in exactly that bind. After dozens of interviews with scientists and parenting experts, input from moms and dads across the country, and her own experiments with her personal time, Rachel figured out how to transform her patterns and reconnect to her pre-kids life. In *The Kids Are in Bed*, other

parents can learn to do the same, and learn to truly enjoy the time after lights-out.

The Women's Brain Book New Harbinger Publications

A groundbreaking new book from the author of the New York Times Bestseller *Brain Rules* What's the single most important thing you can do during pregnancy? What does watching TV do to a child's brain? What's the best way to handle temper tantrums/ Scientists know. In his New York Times bestseller *Brain Rules*, Dr John Medina showed us how our brains really work-and why we ought to redesign our workplaces and schools. Now, in *Brain Rules for Baby*, he shares what the latest science says about how to raise smart and happy children from zero to five. This book is destined to revolutionise parenting. Just one of the surprises- The best way to get your children into the university of their choice? Teach them impulse control. *Brain Rules for Baby* bridges the gap between what scientists know and what parents practice. Through fascinating and funny stories, Medina, a developmental molecular biologist and dad, unravels how a child's brain develops, and offers practical tips for any parent. You will view your children-and how to raise them in a whole new light. You'll learn- Where nature ends and nurture begins Why men should do more household chores What to say to your child when emotions run hot The effect of TV on children under two Why praising effort is better than praising intelligence Why the best predictor of academic performance is not IQ; it's self control What you do right now - before pregnancy, during pregnancy, and through the first five years - will affect a child for the rest of their lives. *Brain Rules for Baby* is an indispensable guide for anyone raising a child.

Brain Rules for Baby (Updated and Expanded) Vintage

A candid, feminist, and personal deep dive into the science and culture of pregnancy and motherhood Like most first-time mothers, Angela Garbes was filled with questions when she became pregnant. What exactly is a placenta and how does it function? How does a body go into labor? Why is breast best? Is wine totally off-limits? But as she soon discovered, it's not easy to find satisfying answers. Your obstetrician will cautiously quote statistics; online sources will scare you with conflicting and often inaccurate data; and even the most trusted books will offer information with a heavy dose of judgment. To educate herself, the food and culture writer embarked on an intensive journey of exploration, diving into the scientific mysteries and cultural attitudes that surround motherhood to find answers to questions that had only previously been given in the form of advice about what women ought to do—rather than allowing them the freedom to choose the right path for themselves. In *Like a Mother*, Garbes offers a rigorously researched and compelling look at the physiology, biology, and psychology of pregnancy and motherhood, informed by in-depth reportage and personal experience. With the curiosity of a journalist, the perspective of a feminist, and the intimacy and urgency of a mother, she explores the emerging science behind the pressing questions women have about everything from miscarriage to complicated labors to postpartum changes. The result is a visceral, full-frontal look at what's really happening during those nine life-altering months, and why women deserve access to better care, support, and information. Infused with humor and born out of awe, appreciation, and understanding of the female body and its strength, *Like a Mother* debunks common myths and dated assumptions, offering guidance and camaraderie to women navigating one of the biggest and most profound changes in their lives.

Boosting Your Baby's Brain Power Penguin

From the author of the #1 New York Times bestseller *Brain Rules* and New York Times bestseller *Brain Maker*... Loss of memory is not a natural part of aging—and this book explains why. Celebrated neurologist David Perlmutter reveals how everyday memory-loss—misplacing car keys, forgetting a name, losing concentration in meetings—is actually a warning sign of a distressed brain. Here he and Carol Colman offer a simple plan for repairing those problems, clarifying misconstrued connections between memory loss and aging, and regaining and maintaining mental clarity by offering the tools for: Building a better brain through nutrition, lifestyle changes, and brain workouts Coping with specific brain disorders such as stroke, vascular dementia, Alzheimer's, Parkinson's, multiple sclerosis, and Lou Gehrig's disease Understanding risk factors and individually tailoring a diet and supplementary program Features a "Life Style Audit," quizzes, a brain fitness program with the most effective ways to exercise your brain, and a nutritional program that details the best brain food and supplements.

Discovering the Brain National Academies Press

NEW YORK TIMES BESTSELLER • More than 1 million copies in print! • The authors of *No-Drama Discipline* and *The Yes Brain* explain the new science of how a child's brain is wired and how it matures in this pioneering, practical book. "Simple, smart, and effective solutions to your child's struggles."—Harvey Karp, M.D. In this pioneering, practical book, Daniel J. Siegel, neuropsychiatrist and author of the bestselling *Mindsight*, and parenting expert Tina Payne Bryson offer a revolutionary approach to child rearing with twelve key strategies that foster

healthy brain development, leading to calmer, happier children. The authors explain—and make accessible—the new science of how a child's brain is wired and how it matures. The "upstairs brain," which makes decisions and balances emotions, is under construction until the mid-twenties. And especially in young children, the right brain and its emotions tend to rule over the logic of the left brain. No wonder kids throw tantrums, fight, or sulk in silence. By applying these discoveries to everyday parenting, you can turn any outburst, argument, or fear into a chance to integrate your child's brain and foster vital growth. Complete with age-appropriate strategies for dealing with day-to-day struggles and illustrations that will help you explain these concepts to your child, *The Whole-Brain Child* shows you how to cultivate healthy emotional and intellectual development so that your children can lead balanced, meaningful, and connected lives. "[A] useful child-rearing resource for the entire family . . . The authors include a fair amount of brain science, but they present it for both adult and child audiences."—Kirkus Reviews "Strategies for getting a youngster to chill out [with] compassion."—The Washington Post "This erudite, tender, and funny book is filled with fresh ideas based on the latest neuroscience research. I urge all parents who want kind, happy, and emotionally healthy kids to read *The Whole-Brain Child*. This is my new baby gift."—Mary Pipher, Ph.D., author of *Reviving Ophelia* and *The Shelter of Each Other* "Gives parents and teachers ideas to get all parts of a healthy child's brain working together."—Parent to Parent

From Neurons to Neighborhoods Delacorte Press

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Brain Health From Birth Simon and Schuster

The central figure of this novel is a young man whose parents were executed for conspiring to steal atomic secrets for Russia. His name is Daniel Isaacson, and as the story opens, his parents have been dead for many years. He has had a long time to adjust to their deaths. He has not adjusted. Out of the shambles of his childhood, he has constructed a new life—marriage to an adoring girl who gives him a son of his own, and a career in scholarship. It is a life that enrages him. In the silence of the library at Columbia University, where he is supposedly writing a Ph.D. dissertation, Daniel composes something quite different. It is a confession of his most intimate relationships—with his wife, his foster parents, and his kid sister Susan, whose own radicalism so reproaches him. It is a book of memories: riding a bus with his parents to the ill-fated Paul Robeson concert in Peekskill; watching the FBI take his father away; appearing with Susan at rallies protesting their parents' innocence; visiting his mother and father in the Death House. It is a book of investigation: transcribing Daniel's interviews with people who knew his parents, or who knew about them; and logging his strange researches and discoveries in the library stacks. It is a book of judgments of everyone involved in the case—lawyers, police, informers, friends, and the Isaacson family itself. It is a book rich in characters, from elderly grandmothers of immigrant culture, to covert radicals of the McCarthy era, to hippie marchers on the Pen-tagon. It is a book that spans the quarter-century of American life since World War II. It is a book about the nature of Left politics in this country—its sacrificial rites, its peculiar cruelties, its humility, its bitterness. It is a book

about some of the beautiful and terrible feelings of childhood. It is about the nature of guilt and innocence, and about the relations of people to nations. It is *The Book of Daniel*.

The Healthy Brain Toolbox Simon and Schuster

For women, understanding how the brain works during the key stages of life - in utero, childhood, puberty and adolescence, pregnancy and motherhood, menopause and old age - is essential to their health. Dr Sarah McKay is a neuroscientist who knows everything worth knowing about women's brains, and shares it in this fascinating, essential book. This is not a book about the differences between male and female brains, nor a book using neuroscience to explain gender-specific behaviours, the 'battle of the sexes' or 'Mars-Venus' stereotypes. This is a book about what happens inside the brains and bodies of women as they move through the phases of life, and the unique - and often misunderstood - effects of female biology and hormones. Dr McKay give insights into brain development during infancy, childhood and the teenage years (including the onset of puberty) and also takes a look at mental health as well as the ageing brain. The book weaves together findings from the research lab, case studies and interviews with neuroscientists and other researchers working in the disciplines of neuroendocrinology, brain development, brain health and ageing. This comprehensive guide explores the brain during significant life stages, including: In utero Childhood Puberty The Menstrual Cycle The Teenage Brain Depression and Anxiety Pregnancy and Motherhood Menopause The Ageing Brain

The Kids Are in Bed Simon and Schuster

A much-needed voice of encouragement for every woman who had a baby and lost her mind Sometimes, motherhood feels never-ending. A child is born, chaos ensues, and it seems like life will never return to normal. In *You Are a F*cking Awesome Mom*, award-winning journalist and Instagram star Leslie Anne Bruce acknowledges that, yes, motherhood is a total mind f*ck—but then she offers the self-empowerment lessons new mothers need to get through the psychic upheaval and emerge stronger than ever. After childbirth, a woman's body, her relationships, and her very sense of self are tested like never before. Bruce encourages readers to look past the sugarcoated truisms about the miracles of child-rearing in order to embrace the real joys of motherhood, spit-up stains and all. Loaded with unfettered support from a mom who has been through it all, *You Are a F*cking Awesome Mom* offers a lifeline of encouragement, inspiration, and community for the new mama who got a baby, lost her mind, and desperately wants to find herself again.

Infant Brain Development HarperCollins

NEW YORK TIMES BEST SELLER • From the world's leading forest ecologist who forever changed how people view trees and their connections to one another and to other living things in the forest—a moving, deeply personal journey of discovery Suzanne Simard is a pioneer on the frontier of plant communication and intelligence; her TED talks have been viewed by more than 10 million people worldwide. In this, her first book, now available in paperback, Simard brings us into her world, the intimate world of the trees, in which she brilliantly illuminates the fascinating and vital truths—that trees are not simply the source of timber or pulp, but are a complicated, interdependent circle of life; that forests are social, cooperative creatures connected through underground networks by which trees communicate their vitality and vulnerabilities with communal lives not that different from our own. Simard writes—in inspiring, illuminating, and accessible ways—how trees, living side by side for hundreds of years, have evolved, how they learn and adapt their behaviors, recognize neighbors, compete and cooperate with one another with sophistication, characteristics ascribed to human intelligence, traits that are the essence of civil societies—and at the center of it all, the *Mother Trees*: the mysterious, powerful forces that connect and sustain the others that surround them. And Simard writes of her own life, born and raised into a logging world in the rainforests of British Columbia, of her days as a child spent cataloging the trees from the forest and how she came to love and respect them. And as she writes of her scientific quest, she writes of her own journey, making us understand how deeply human scientific inquiry exists beyond data and technology, that it is about understanding who we are and our place in the world.

The Sense of an Ending Ballantine Books

The ultimate must-read handbook for the modern mother: a practical, and positive tool to help free women from the debilitating notion of being the "perfect mom," filled with funny and all too relatable true-life stories and realistic suggestions to stop the burnout cycle, and protect our kids from the damage burnout can cause. Moms, do you feel tired? Overwhelmed? Have you continually put off the things you need to do for you? Do you feel like it's all worth it because your kids are happy? Are you "over" being a mother? If you answered yes to these questions, you're not alone. Parents today want to create the ideal childhood for their children. Women strive to be the picture-perfect Pinterest mother that looks amazing, hosts the best birthday parties in town, posts the most "liked" photos, and serves delicious, nutritious home-cooked meals in her neat, organized home after ferrying the kids to school and a host of extracurricular activities on time. This drive, while noble, can also be destructive, causing

stress and anxiety that leads to "mommy burnout." Psychologist and family counselor Dr. Sheryl Ziegler is well-versed in the stress that moms face, and the burden of guilt they carry because they often feel like they aren't doing enough for their kids' happiness. A mother of three herself, Dr. Z—as she's affectionately known by her many patients—recognizes and understands that modern moms are all too often plagued by exhaustion, failure, isolation, self-doubt, and a general lack of self-love, and their families are also feeling the effects, too. Over the last nineteen years working with families and children, Dr. Z has devised a prescriptive program for addressing "mommy burnout"—teaching moms that they can learn to re-energize themselves and still feel good about their families and their lives. In this warm and empathetic guide, she examines this modern epidemic among mothers who put their children's happiness above their own, and offers empowering, proven solutions for alleviating this condition, saving marriages and keeping kids happy in the process.

Klara and the Sun Rowman & Littlefield Publishers

The Mom Test is a quick, practical guide that will save you time, money, and heartbreak. They say you shouldn't ask your mom

whether your business is a good idea, because she loves you and will lie to you. This is technically true, but it misses the point. You shouldn't ask anyone if your business is a good idea. It's a bad question and everyone will lie to you at least a little. As a matter of fact, it's not their responsibility to tell you the truth. It's your responsibility to find it and it's worth doing right. Talking to customers is one of the foundational skills of both Customer Development and Lean Startup. We all know we're supposed to do it, but nobody seems willing to admit that it's easy to screw up and hard to do right. This book is going to show you how customer conversations go wrong and how you can do better.

Finding the Mother Tree Scribe Publications

"Everyone knows how babies are made, but scientists are only just beginning to understand the making of a mother. Mom Genes reveals the hard science behind our tenderest maternal impulses, tackling questions such as whether a new mom's brain ever really bounces back, why mothers are destined to mimic their own moms (or not), and how maternal aggression makes females the world's most formidable creatures."--Publisher's description.

You Are a F*cking Awesome Mom Random House

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.
