I know that.You don't need anything else; just one click on "Buy Now," and you will let your child live a magical new adventure with his new friend Guinea Pigs and the magic natural world of small animals.

Genesis and Development of a Scientific Fact Academic Press
 "Compact, easy-to-care-for, and a bundle of fun" is how author Virginia Parker Guidry describes the irresistible guinea pig. Ideal pets for families with children, cavies (as they're often called) are clean, odorless, gentle, loving, and entertaining. This Complete Care Made Easy Guinea Pigs encapsulates all the virtues of these perfect small mammals and gives new owners practical advice about how to care for them. In chapter one, "A Guinea What?" the author talks about the guinea pig's natural history—they're neither pigs nor from Guinea, but rather a rodent from Peru—and how scientists classify this very unique mammal. To decide whether the guinea pig is right for you, chapter two discusses who makes the ideal owner and presents thirteen popular breeds of longhaired and shorthaired guinea pigs and the colors available to pet owners today. The chapter "Finding a Healthy Guinea Pig" offers solid advice about selecting the right guinea pig, where to purchase or adopt, and the preferred sex. A complete chapter on preparing for the guinea pig offers the reader excellent advice

about acclimating the new pet to the home, selecting the best cage and hutch, and pig-proofing the home. The subject of understanding guinea pig behavior is discussed in the chapter "Living with a Guinea Pig," which also covers daily-care topics such as feeding, grooming, handling, exercise, and litter box training. Keeping the guinea pig healthy is discussed in "Staying Healthy," a chapter that covers preventing illness, choosing a veterinarian, and common ailments. The final chapter "Just for the Fun of It!" explores games, toys, activities, and showing guinea pigs. The appendix includes lists of pig-specific clubs, organizations, and websites. Glossary of terms and index included.

If Animals Could Talk: Guinea Pigs National Academies Press
 Originally published in German in 1935, this monograph anticipated solutions to problems of scientific progress, the truth of scientific fact and the role of error in science now associated with the work of Thomas Kuhn and others. Arguing that every scientific concept and theory—including his own—is culturally conditioned, Fleck was appreciably ahead of his time. And as Kuhn observes in his foreword, "Though much has occurred since its publication, it remains a brilliant and largely unexploited resource." "To many scientists just as to many historians and philosophers of science facts are things that simply are the case: they are discovered through properly passive observation of natural reality. To such views Fleck replies that facts are invented, not discovered. Moreover, the appearance of scientific facts as discovered things is itself a social construction, a made thing. A work of transparent brilliance, one of the most significant contributions toward a thoroughly sociological account of scientific knowledge."—Steven Shapin, Science

Bedtime Math wants to change the way we introduce math to children: to make math a fun part of kids' everyday lives. We all know it's wonderful to read bedtime stories to kids, but what about doing math? Many generations of Americans are uncomfortable with math and numbers, and too often we hear the phrase, "I'm just not good at math!" For decades, this attitude has trickled down from parents to their kids, and we now have a culture that finds math dry, intimidating, and just not cool. Bedtime Math wants to change all that. Inside this book, families will find fun, mischief-making math problems to tackle—math that isn't just kid-friendly, but actually kid-appealing. With over 100 math riddles on topics from jalapeños and submarines to roller coasters and flamingos, this book bursts with math that looks nothing like school. And with three different levels of challenge (wee ones, little kids, and big kids), there's something for everyone. We can make numbers fun, and change the world, one Bedtime Math puzzle at a time.

 The founder and president of PETA, Ingrid Newkirk, and bestselling author Gene Stone explore the wonders of animal life with "admiration and empathy" (The New York Times Book Review) and offer tools for living more kindly toward them. In the last few decades, a wealth of new information has emerged about who animals are: astounding beings with intelligence, emotions, intricate communications networks, and myriad abilities. In Animalkind, Ingrid Newkirk and Gene Stone present these findings in a concise and awe-inspiring way, detailing a range of surprising discoveries, like that geese fall in love and stay with a partner for life, that fish "sing" underwater, and that elephants use their trunks to send subsonic signals, alerting other herds to danger miles away. Newkirk and Stone pair their tour through the astounding lives of animals with a guide to the exciting new tools that allow humans to avoid using or abusing animals as we once did. Whether it's medicine, product testing, entertainment, clothing, or food, there are now better options to all the uses animals once served in human life. We can substitute warmer, lighter faux fleece for wool, choose vegan versions of everything from shrimp to marshmallows, reap the benefits of animal-free medical research, and scrap captive orca exhibits and elephant rides for virtual reality and animatronics. Animalkind provides a fascinating look at why our fellow living beings deserve our

respect, and lays out the steps everyone can take to put this new understanding into action.

Raising awareness of human indifference and cruelty toward animals, *The Global Guide to Animal Protection* includes more than 180 introductory articles that survey the extent of worldwide human exploitation of animals from a variety of perspectives. In addition to entries on often disturbing examples of human cruelty toward animals, the book provides inspiring accounts of attempts by courageous individuals—including Jane Goodall, Shirley McGreal, Birute Mary Galdikas, Richard D. Ryder, and Roger Fouts—to challenge and change exploitative practices. As concern for animals and their welfare grows, this volume will be an indispensable aid to general readers, activists, scholars, and students interested in developing a keener awareness of cruelty to animals and considering avenues for reform. Also included is a special foreword by Archbishop Desmond Tutu, urging readers to seek justice and protection for all creatures, humans and animals alike.

Kolb has produced a thoroughly researched essay on this painting, which is in the Getty Museum. The study focuses on Brueghel’s depiction of nature, especially his exacting representation of identifiable species of animals and birds, the names of which are listed. Brueghel’s collaboration with other painters, his and other painters’ re-use of the same theme and composition, and the history and practice of natural history collection and representation are central themes. The volume, which is printed in a horizontal format (it’s 11x8”) and heavily illustrated, is written for a general audience, though art historians will also find much of interest.

New York Times Bestseller “This book may help those who are susceptible to illnesses that can be prevented.”—His Holiness the Dalai Lama “Absolutely the best book I’ve read on nutrition and diet” —Dan Buettner, author of *The Blue Zones Solution* From the physician behind the wildly popular NutritionFacts website, *How Not to Die* reveals the groundbreaking scientific evidence behind the only diet that can prevent and reverse many of the causes of disease-related death. The vast majority of premature deaths can be prevented through simple changes in diet and lifestyle. In *How Not to Die*, Dr. Michael Greger, the internationally-renowned nutrition expert, physician, and founder of NutritionFacts.org, examines the fifteen top causes of premature death in America—heart disease, various cancers, diabetes, Parkinson’s, high blood pressure, and more—and explains how nutritional and lifestyle interventions can sometimes trump prescription pills and other pharmaceutical and surgical approaches, freeing us to live healthier lives. The simple truth is that most doctors are good at treating acute illnesses but bad at preventing chronic disease. The fifteen leading causes of death claim the lives of 1.6 million Americans annually. This doesn’t have to be the case. History of prostate cancer in your family? Put down that glass of milk and add flaxseed to your diet whenever you can. Have high blood pressure? Hibiscus tea can work better than a leading hypertensive drug—and without the side effects. Fighting off liver disease? Drinking coffee can reduce liver inflammation. Battling breast cancer? Consuming soy is associated with prolonged survival. Worried about heart disease (the number 1 killer in the United States)? Switch to a whole-food, plant-based diet, which has been repeatedly shown not just to prevent the disease but often stop it in its tracks.
