Relentless Pursuit - On June 6, 2015, two convicted killers escaped from New York State's toughest maximum security prison, Dannemora. What followed over the next 23 days, was an unbelievable

tale of intrigue, as salacious facts revealed the murderers had seduced a female prison employee into aiding in their plan to escape. Swept up by their artful manipulation, she smuggled hacksaw blades into the prison in frozen hamburger, engaged in sexual conduct with one of the inmates, and schemed to pick them up at midnight as they emerged from a manhole cover outside prison walls, in the heart of the village. To clear the way for their planned escape to Mexico, there allegedly was even talk of murdering her unsuspecting husband, to remove the "glitch." This is the inside story of the terrorized community, the outstanding men and women of law enforcement, and the State Trooper responsible for capturing the inmates. [NAPD Underwater Search and Recovery](#) Greenwood Water Rescue: Principles and Practice to NFPA 1006 and 1670: Surface, Swiftwater, Dive, Ice, Surf, and Flood, Second Edition Includes Navigate 2 Advantage is a complete resource for water rescue personnel and their organizations. All six sub-disciplines are broken down into Awareness,

Operations and Technician level chapters to better help you and your organization train to the levels your organization is ready to deliver in your response area. Based on the 2017 Editions of NFPA 1006: Standard for Technical Rescue Personnel Professional Qualifications and NFPA 1670: Standard on Operations and Training for Technical Search and Rescue Incidents, this single textbook is the most current and comprehensive water rescue textbook available. **Sport Diver** Concept Systems, Incorporated Building on his first book, "SCUBA: A Practical Guide for the New Diver", James Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge

and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance. Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first

book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.

Diver Scuba Publications - D. Goldstein

With 2170 kilometers of coastline fronting on the Gulf of Thailand and the Andaman Sea, Thailand has one of the richest marine faunas in the world. Its tropical climate ensures year-round diving pleasure in pristine waters and varied underwater terrain that host a diversity of marine life, from brilliant colored coral polyps to graceful featherstars and a wide variety of reef fish, shark, marlin, sailfish, and barracuda. In a unique compilation of facts and photographs, writer Collin Piprell and photographer Ashley J. Boyd take an enticing look at some of Thailand's best dive sites - along with expert advice on travel, preparation, and facilities. Whether it is scuba diving, wreck diving or live-aboard cruises to premier destinations such as the Similans, the Surins, or the fabled Burma Banks,

Diving in Thailand opens up an exciting vista of undersea life and diving spots that are among the best in the world.

Search and Recovery

Dog Ear Publishing Searching and recovering submerged objects is very rewarding and can also be a lot of fun. In this book you will receive an extensive overview on the techniques and

procedures for searching and recovering of submerged objects to help you get closer to these activities. Among other contents, the topics in this book cover the organization of the search of a underwater object, team structure, specific equipment, orientation and navigation, safety procedures, recovery techniques and treatments to preserve recovered objects. Many indications in this book are given for information purposes, as they can only be used by maritime companies, while others are used by anyone with a diving license and has done appropriate training supervised by an instructor. Recovering a small outboard engine that fell into the sea can be a great challenge and source of great satisfaction, as well as finding an old wreck that was thought to be lost forever. The search and recovery activities can be interesting for any diver, passionate about history, sea and adventure. Wrecks and objects of all kinds lie at the bottom of the oceans, lakes and rivers; now is the time to find them again...

Relentless Pursuit

SCUBA is a fun, relaxing,

educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even

then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise,

but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe
