This book presents the results of a multi-

annual project with sustainable Living Labs in the United Kingdom, Sweden, Germany and the Netherlands. Living Labs – as initiated by the authors – have proved to be very promising research, design, co-creation and communication facilities for the development and implementation of sustainable innovations in the home. The book provides an inspiring introduction to both the methodology and business modelling for the Living Lab facilities. Understanding daily living at home is key to designing products and services that support households in their transition to more sustainable lifestyles. This book not only explores new ways of gaining insights into daily practices, but also discusses developing and testing design methods to create sustainable

solutions for households. These new methods and tools are needed because those available are either ineffective or cause rebound-effects. Intended for researchers and designers with an interest in the transition to sustainable lifestyles, it also appeals to company leaders interested in new ways of developing sustainable innovations and offers suggestions for effectively applying Living Labs for sustainable urban development.

 Ralf Friedrich developed an academically validated and process-oriented maturity model with emphasis on special needs of virtual teams. He provides criteria and indicators of performance for virtual teams and combines different approaches of maturity models into an overall framework to measure and develop virtual team performance. This book describes the development and validation of the Virtual Team Maturity

Model (VTMM®) consisting of 11 processes for virtual team collaboration, defined by inputs, methods, outputs and Key Performance Indicators (KPIs) assigned to four maturity levels. The model supports an algorithm for calculating the maturity level of the team based on a set of questionnaires.

 Long description: This study contributes to the question how managers could be qualified to increase their ability to activate resources and develop sense of coherence in challenging transcultural work contexts. Thereby it refers to developing intercultural competence and well-being in transcultural management settings by presenting a salutogenetic-oriented consultancy model: "Mental health in transcultural organisations".

This model is based on a systemic and salutogenetic, transcultural and transformative fundament and includes counselling, a managerial training series and a team mentoring approach, as well as facilitator training.

#### Trainee-Knigge Routledge

Offers a different perspective on global governance from the vantage point of a global knowledge society. Employing a case study of the global financial system and an analysis of several governance regimes, this work contends that markets, legal systems, and morality must evolve to cope with uncertainty, build capacities, and achieve resilience.

"This is the latest in a series of

proceedings of conferences on the Mathematical Foundations of Programming Semantics. The purpose of the series is to bring together mathematicians and theoretical computer scientists who share the common interests of working on problems related to programming language semantics. The purpose of the book is to bring into print as quickly as possible papers which reflect the state of research on the topics comprising this area. The intended audience for the book consists of those researchers and graduate students with an interest in the research areas which are related to those presented in the book: programming language semantics, including algebraic, denotational and operational semantics, logics of

programs, specification techniques, etc., and the relevant areas of mathematics research, including category theory, domain theory, ordered structures and lattice theory, and metric space methods. The papers included in the book represent the latest results in various facets of this rather broad research area, and this is the first time some of the ideas contained in these works are appearing in print."-- PUBLISHER'S WEBSITE.

Critics of foreign aid programs have long argued that poverty reflects government failure. In this paper I analyze the effectiveness of foreign aid programs to gain insights into political regimes in aid recipient countries. My analytical

framework shows how three stylized political/economic regimes labeled egalitarian, elitist and laissez-faire would use foreign aid. I then test reduced form equations using data on nonmilitary aid flows to 96 countries. I find that models of elitist political regimes best predict the impact of foreign aid. Aid does not significantly increase investment and growth, nor benefit the poor as measured by improvements in human development indicators, but it does increase the size of government. I also find that the impact of aid does not vary according to whether recipient governments are liberal democratic or highly repressive. But liberal political regimes and democracies, ceteris paribus, have on average 30% lower infant mortality than the least free

regimes. This may be due to greater empowerment of the poor under liberal regimes even though the political elite continues to receive the benefits of aid programs. An implication is that short term aid targeted to support new liberal regimes may be a more successful means of reducing poverty than current programs.

Using dramatic personal narratives, Kotre expands upon Erik Erikson's concept of generativity. This concept means the variety of ways people find to be fertile in their lives, from the biological task of leaving a genetic legacy, to the emotional work of nurturing and guiding children, to teaching practical skills, transmitting values, and attempting to enrich their

culture.

Seminar paper from the year 2015 in the subject Leadership and Human Resource Management - Management Styles, grade: 1,0, University of Frankfurt (Main), language: English, abstract: The history of leadership research and leadership theory goes far back into the past. Ever since people have lived together in groups, there have been leaders and those who are led. The many different leadership styles have also been discussed and criticized since the 1950s. The question arises which style is the most efficient or the "right" style for leading people. For a company it is of great importance with which behavior their managers can influence or

motivate the employees to the best possible performance and thus achieve the company's goals. Empirical studies show that the leadership style has a great influence on the work and well-being of leaders and employees and thus also on the economic success of the company. However, there is no one optimal leadership style as several studies and publications have already proven. Each of the styles can achieve both positive and negative results, depending on the situation and the individual employee. The leadership styles should be adapted according to the situation. In this paper, after defining the terms leadership and leadership style, on the one hand the classical leadership styles and on the other hand the transactional and the

transformational leadership styles are explained and compared. Possible advantages and disadvantages as well as their influence on employee motivation, willingness to perform and leadership success will be shown. In addition, results of current studies will provide an insight into the state of research. Finally, the most important points are summarized and a concluding conclusion is drawn on the basis of the knowledge gained.

*The Affinity Bridge* Springer-Verlag  
Presenting original, detailed studies of keywords of Danish, this book breaks new ground for the study of language and cultural values. Based on evidence from the semantic categories of everyday language, such as the Danish concept of *hygge* (roughly meaning, 'pleasant togetherness'), the book provides an integrative socio-cognitive framework for studying and understanding language-particular universes. It is argued that the worlds we live in are not linguistically and conceptually neutral, but rather that speakers who live by Danish concepts are likely to pay attention to their world in ways suggested by central Danish

keywords and lexical grids. By means of a sophisticated semantic methodology, the author accounts for the meanings of even highly culture-specific and untranslatable linguistic concepts. The book offers new tools for comparative research into the diversity of semantic and cultural systems in contemporary Europe. Additionally, it contributes to the emerging discipline of cultural semantics, and to the ongoing debates of linguistic diversity, metalanguage, and the use of linguistic evidence in studies of culture and social cognition. The Virtual Team Maturity Model SAGE  
In this groundbreaking book, Nira Yuval-Davis provides a cutting-edge investigation of the challenging debates around belonging and the politics of belonging. Alongside the hegemonic

forms of citizenship and nationalism which have tended to dominate our recent political and social history, the author examines alternative contemporary political projects of belonging constructed around the notions of religion, cosmopolitanism, and the feminist 'ethics of care'. The book also explores the effects of globalization, mass migration, the rise of both fundamentalist and human rights movements on such politics of belonging, as well as some of its racialized and gendered dimensions. A special space is given to the various feminist political movements that have been engaged as part of or in resistance to the political projects of belonging. "It was high time that someone tried to explain more fully, and on the basis of the known documents, the course of Beethoven's meteoric rise to fame in Vienna at the end of the eighteenth century. . . . I would consider this cleverly written and authoritative book to be the most important about Beethoven in twenty-five years. No one considering the subject will be able to overlook DeNora's research."—H.C. Robbins Landon, author of *Beethoven: His Life, Work, and World* "This is a study with the power to reshape our perceptions of Beethoven's first decade in Vienna and substantially refine our notions of the creation and foundations of Beethoven's career."—William Meredith, Ira Brilliant Center for Beethoven Studies, San Jose State

University "Professor DeNora's achievement in placing Beethoven, and the reception of Beethoven's music, in social context is all the more impressive because it goes so much against the grain of conventional habits of thought. In illuminating how changing social institutions created opportunities for Beethoven to gain contemporary and posthumous recognition, and, in so doing, created new forms for thinking and talking about musical achievement—the author at once provides fresh insights into the institutional origins of 'classical' music and offers an exemplary contribution to the sociological study of the arts."—Paul DiMaggio, Princeton University "An important landmark in our understanding of the relationship of the

creative musician to society, and a vital contribution to debates about the central phenomenon which distinguishes Western music from other musical traditions: the phenomenon of the Great Composer."—Julian Rushton, University of Leeds "This original book argues that Beethoven's high reputation was created as much by the social-cultural agendas of his aristocratic Viennese patrons in the 1790s as by the qualities of his music. DeNora's persuasive reading of this momentous cultural-artistic event will be welcome to sociologists for its successful contextualization of a hero of 'absolute music,' as well as to musicologists and music-lovers who wish to move beyond the myth of Beethoven as 'the man who freed music.'"—James Webster, Cornell University "Lucid, well-

researched, and theoretically informed, Beethoven and the Construction of Genius is one of the best works yet published in the historical sociology of culture. DeNora makes important contributions not only to our knowledge of Beethoven and of the social construction of genius but to the general problems of how identities are created, shaped, and sustained and of how aesthetic claims gain authority."—Craig Calhoun, University of North Carolina
