A concise introduction to the basics of open access, describing what it is (and isn't) and showing that it is easy, fast, inexpensive, legal, and beneficial. The Internet lets us share perfect copies of our work with a worldwide audience at virtually no cost. We take advantage of this revolutionary opportunity when we make our work "open access": digital, online, free of charge, and free of most copyright and licensing restrictions. Open access is made possible by the Internet and copyright-holder consent, and many authors, musicians, filmmakers, and other creators who depend on royalties are understandably unwilling to give their consent. But for 350 years, scholars have written peer-reviewed journal articles for impact, not for money, and are free to consent to open access without losing revenue. In this concise introduction, Peter Suber tells us what open access is and isn't, how it benefits authors and readers of research, how we pay for it, how it avoids copyright problems, how it has moved from the periphery to the mainstream, and what its future may hold. Distilling a decade of Suber's influential writing and thinking about open access, this is the indispensable book on the subject for researchers, librarians, administrators, funders, publishers,

and policy makers.

As one of the world's megacities, São Paulo has for decades seen an investment in architectural infrastructures that attempt to mitigate its open space shortages as well as fulfill the constant need for recreational, cultural, and sports programs. These buildings and open spaces - which can be public, semi-public, or privately-owned - arguably attempt to create inclusive places for urban society. This exhibition catalogue presents projects at different scales, focusing on their programmatic characteristics rather than the formal qualities usually emphasized in scholarship on Brazilian architecture. While many cities around the world are still chasing the so-called "Bilbao Effect" - the creation of a monofunctional "signature" architectural work by a famous architect that can attract tourism - this exhibition catalogue advocates for architectural infrastructure that adds programs of different natures, and that are aimed at social sustainability for local citizens. This aspect of urban growth in São Paulo - quite a vertical and densely-populated city; a city of great resources and also tremendous poverty; a city with high crime rates; a city with severe traffic issues; a city with public-health problems - illustrates how architecture and infrastructure can contribute to a city's urban development in multiple ways.

Influential writings make the case for open access to research, explore its implications, and document the early struggles and successes of the open access movement. Peter Suber has been a leading advocate for open access since 2001 and has worked full time on issues of open access since 2003. As a professor of philosophy during the early days of the internet, he realized its power and potential as a medium for scholarship. As he writes now, "it was like an asteroid crash, fundamentally changing the environment, challenging dinosaurs to adapt, and challenging all of us to figure out whether we were dinosaurs." When Suber began putting his writings and course materials online for anyone to use for any purpose, he soon experienced the benefits of that wider exposure. In 2001, he started a newsletter—the Free Online Scholarship Newsletter, which later became the SPARC Open Access Newsletter—in which he explored the implications of open access for research and scholarship. This book offers a selection of some of Suber's most significant and influential writings on open access from 2002 to 2010. In these texts, Suber makes the case for open access to research; answers common questions, objections, and misunderstandings; analyzes policy issues; and documents the growth and evolution of open access during its most critical early

decade.

Approved by the CIA Publication Review Board. "Duncan Hunter is a great character... an excellent read." - A Good Thriller Basking in the glory of killing Osama bin Laden, the President revealed that US Navy SEALs carried out the mission. His constant heralding of their heroism and capabilities damaged the SEAL's operational security, revealed tricks of their trade, and endangered them and their families. As some in the Special Operations community expected and feared, a number of SEALs are systematically killed across the country. The Navy's legendary SEAL commander, Captain Bill McGee, believes he is the next target of a sniper and seeks help from a close friend with unusual contacts and capabilities. Duncan Hunter, a retired Marine Corps fighter pilot, flies a top-secret airplane with his mentor, Greg Lynche, the sometimes über-liberal retired CIA Chief of Air Branch. Together, in their quiet airplane, they execute some of the CIA's most sensitive airborne counterterrorism missions under a Special Access Program. Saving McGee from a sniper's bullet comes at a price as Duncan Hunter finds himself at the crossroads - either remain a contract pilot and betray a friend or become a patriot and risk exposure as a traitor. His decision pulls him into one intrigue after another, finally revealing the truth behind several conspiracies hidden behind the firewalls of top-secret security clearances, CIA files, and Special Access Programs.

Writing about Learning and Teaching in Higher Education offers detailed guidance to scholars at all stages-experienced and new academics, graduate students, and undergraduates-regarding how to write about learning and teaching in higher education. It evokes established practices, recommends new ones, and challenges readers to expand notions of scholarship by describing reasons for publishing across a range of genres, from the traditional empirical research article to modes such as stories and social media that are newly recognized in scholarly arenas. The book provides practical guidance for scholars in writing each genre-and in getting them published. To illustrate how choices about writing play out in practice, we share throughout the book our own experiences as well as reflections from a range of scholars, including both highly experienced, widely published experts and newcomers to writing about learning and teaching in higher education. The diversity of voices we include is intended to complement the variety of genres we discuss, enacting as well as arguing for an embrace of multiplicity in writing about learning and teaching in higher education.

This open access book marks the first historical overview of the autism rights branch of the neurodiversity movement, describing the activities and rationales of key leaders in their own words since it organized into a unique community in 1992. Sandwiched by editorial chapters that include critical analysis, the book contains 19 chapters by 21 authors about the forming of the autistic community and neurodiversity movement, progress in their influence on the broader autism community and field, and their possible threshold of the advocacy establishment. The actions covered are legendary in the autistic community, including manifestos such as "Don't Mourn for Us", mailing lists, websites or webpages, conferences, issue campaigns, academic project and journal, a book, and advisory roles. These actions have shifted the landscape toward viewing autism in social terms of human rights and identity to accept, rather than as a medical collection of deficits and symptoms to cure.

The report looks at the development of new versions of websites specifically designed for mobile access, at use of various paid and open source services and product for mobile device access, and at general library policies designed to ease the experience of mobile device users. The report presents highly detailed data on the extent of library website traffic accounted for by mobile devices, the impact on library resource use of the deployment of mobile friendly information products from vendors, and much more. More than 60 libraries contributed comprehensive data and insights to the report, and data is broken out by size and type of library and other useful criteria
