Although many books in Pediatrics are available, both large and small but none teaches a straight forward approach that can be quickly and easily grasped by a medical student, intern or a junior resident, as a result they are heavily dependent on their senior colleagues for

guidance all the time. The book is written by 37 specialist's senior doctors from a University teaching Hospital. Most of them are either members or fellows of Royal College of Paediatrics and Child health of UK. They possess sound experience in the day to day management of the diseases that they wrote about. Throughout the book we have tried to maintain a common format for each chapter by first defining the topic with its incidence so as to give an idea about how common the condition is.

The causes are classified in an order of priority rather than a theoretical list; a practical approach to differential diagnosis is discussed based on history, physical examination, and primary investigations. The specific lab tests needed for confirmation is given according to clinical situation. The management is outlined in a simple and practical form as it is practiced at our institution; wherever possible, we have used tables and algorithms and also tried to incorporate the standard ward protocols to make the management approach uniform and evidence based. Finally, the prognosis and common complications are outlined to understand the need for long-term follow-up. Family counseling is especially emphasized. As passing exams is an essential aspect of

medical training, a chapter is especially included to guide the students in this regard. We sincerely expect that this book will prove to be a significant step forward in improving the teaching and learning process of all students and junior doctors.

A Practical Approach to Clinical Paediatrics Churchill Livingstone
Excerpt from Practical Pediatrics, Vol. 1 of 2: A Modern Clinical Guide in the Diseases of Infants and Children for the Family Physician This is the Golden Age of the Child. Economists in all lines are now acutely aware that the largest national asset is the sound young human unit. To fulfil this role the primary

requisite is health of body and mind. Eugenics is fast becoming (as Galton expressed the fervent hope it would be) an integral part of faith, of "religion," and while parenthood and race culture are being studied earnestly by scientists, yet there is much to learn before eugenics can secure communal encouragement. Truths emerge slowly from many carefully grouped findings, and then only after much revision and rejection, and by reason of wide and generous co-operation. No truths can be more worthy of pursuit than those underlying and conditioning the buddings of human life forces. The young human being is too often regarded by the paediatrist, and yet oftener by the pedagogue, as an adult in miniature; ways and means for conservation, repair and education being

devised and applied on this wholly erroneous basis. Biologists have made it clear that the young child reaches an acme of vitality during the nursery-age, which demands conservation then and there, or irreparable losses will occur and departures from normal growth begin. Clinicians are reaching the same conclusion in respect to the paramount need for such a prompt and complete recognition and repair of abnormalities and ailments as shall turn aside currents of hurtful influences inducing damage or hypoplasia. Thus it will be evident that the subject of developmental abnormalities demands earliest recognition; equally so of the incipience of acquired abnormalities, significant not only in and by themselves, but in the effects they must

induce upon organic integrity and growth of the organism in part or in whole. The child, then, must be studied as a concrete entity, and from all aspects, if we are to do our duty as conservators of health. Handbook of Paediatrics 7e gives medical practitioners practical guidelines for managing critical problems such as HIV infection, tuberculosis, and malaria. Clinical And Practical Paediatrics- Including Neonatology And Adolescent Medicine, 2e JP Medical Ltd

Almost all paediatrics textbooks describe disease processes. This book is unique in that it deals with problems (symptoms) as they are presented to the doctor. The problems are approached in a manner that is common practice in clinical paediatrics, namely obtaining a history

followed by physical examination, and planning investigations in order to elucidate the diagnosis. General principles of management are discussed without going into a detailed description of diseases and their management. The book will be of use to medical officers in paediatrics and general practice. Pediatric Pearls CBS Publishers & Distributors Pvt Limited, India
Designed for residents and clinicians in paediatric emergencies occurring in day-to-day practice and emphasizes the management of neonatal and childhood convulsions, CNS infections, diarrhea with dehydration, pneumonia and childhood wheezing, poisoning, coma and shock, The book also includes chapters on nutrition, practical procedures and drug formulary to
