This effort constitutes the most comprehensive and authoritative work to date on the history of the International Bank for Reconstruction and Development, or the World Bank. Author-editors John Lewis, Richard Webb, and Devesh Kapur chronicle the evolution of this institution and offer insights into its successes, failures, and prospects for the future. The result of their intense labors is an invaluable resource for other researchers and a fascinating study in its own right. The work is divided into two volumes. The first is organized thematically and examines the critical events and policy issues in the World Bank's development over the last fifty years. Chapter topics include poverty alleviation, structural adjustment lending, environmental programs, the International Finance Corporation (IFC), the International Development Association (IDA), and the evolution of the Bank as an institution. The second volume contains case studies written by experts with experience in the various regions in which the Bank operates.

There are chapters on the Bank's activities in Korea, Mexico, Africa, South Asia, and Eastern Europe. Volume 2 also contains essays on the World Bank's relationship with the United States, Japan, and Western Europe, and its partnership with the International Monetary Fund (IMF). By special arrangement, the authors have had wide-ranging access to confidential documents at the World Bank, making this work a unique source of information on the internal workings of this critical institution. They have also drawn on extensive interviews with current and past Bank officials. Moreover, publication could not be more timely, coming as it does when many in the development community and in the U.S. Congress are questioning the Bank's track record and even its reason for existence. The World Bank: Its First Half Century will be of great interest not only to development practitioners but also to students of international relations, development economics, and global finance. During the course of the project, John P. Lewis and Richard Webb were nonresident senior fellows, and Devesh Kapur was a program associate, in the Foreign Policy Studies program at the Brookings Institution.

Challenging the popular myth of a present-day 'information revolution', Media Technology and Society is essential reading for anyone interested in

the social impact of technological change. Winston argues that the development of new media forms, from the telegraph and the telephone to computers, satellite and virtual reality, is the product of a constant play-off between social necessity and suppression: the unwritten law by which new technologies are introduced into society only insofar as their disruptive potential is limited.

Before putting digital systems for information technology or telecommunication applications on the market, an essential requirement is to perform tests in order to comply with the limits of radiated emission imposed by the standards. This book provides an investigation into signal integrity (SI)

and electromagnetic interference (EMI) problems. Topics such as reflections, crosstalk, switching noise and radiated emission (RE) in high-speed digital systems are covered, which are essential for IT and telecoms applications. The highly important topic of modelling is covered which can reduce costs by enabling simulation data to demonstrate that a product meets design specifications and regulatory limits. According to the new European EMC directive, this can help to avoid the expensive use of large semi-anechoic chambers or open area test sites for radiated emission assessments. Following a short introduction to signalling and radiated interference in digital systems, the book provides a detailed characterization of logic families in terms of static and dynamic characteristic useful for modelling techniques. Crosstalk in multi-coupled line structures are investigated by analytical, graphical and circuit-based methods, and techniques to mitigate these phenomena are provided. Grounding, filtering and shielding with multilayer PCBs are also examined and design rules given. Written by authors with extensive experience in industry and academia. Explains basic conceptual problems from a theoretical and practical point of view by using numerous measurements and simulations. Presents models for mathematical and SPICE-like circuit simulators. Provides examples of using full-wave codes for SI and RE investigations. Companion website containing lists of codes and sample material. Signal Integrity and Radiated Emission of High-Speed Digital Systems is a valuable resource to industrial designers of information technology, telecommunication equipment and automation equipment as well as to development engineers. It will also be of interest to managers and designers of consumer electronics, and researchers in electronics.

"The Open Access version of this book, available at <https://doi.org/10.4324/9780429458781>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license." This book examines the uncertainties underlying various strategies for a low-carbon future. Most prominently, such strategies relate to transitions in the energy sector, on both the supply and the demand side. At the same time they interact with other sectors, such as industrial production, transport, and building, and ultimately require new behaviour patterns at household and individual levels. Currently, much research is available on the effectiveness of these strategies but, in order to successfully implement comprehensive transition pathways, it is crucial not only to understand the benefits but also the risks. Filling this gap, this volume provides an interdisciplinary, conceptual framework to assess risks and uncertainties associated with low-carbon policies and applies this consistently across 11 country cases from around the world, illustrating alternative transition pathways in various contexts. The cases are presented as narratives, drawing on stakeholder-driven research efforts. They showcase diverse empirical evidence reflecting the complex challenges to and potential negative consequences of such pathways. Together, they enable the reader to draw valuable lessons on the risks and uncertainties associated with choosing the envisaged transition pathways, as well as ways to manage the implementation of these pathways and ultimately enable sustainable and lasting social and environmental effects. This book will be of great interest to students, scholars, and practitioners of environmental and energy policy, low-carbon transitions, renewable energy technologies, climate change action, and sustainability in general.

This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management.

Christopher Shaw, the book's author said, "Through preferential postage rates for nonprofits the Postal Service facilitates civic involvement and a healthy democracy." Nader also noted, "Postal employees are fairly remunerated in an increasingly low-wage, low benefit 'Wal-Mart' economy." According to Nader, "Post offices serve as the heart of community life in neighborhoods and towns nationwide and the presence of postal workers on community streets make them safer, as the many beneficiaries of their frequently heroic efforts attest." "The lack of citizen-consumers' involvement in the recently passed postal reform legislation has highlighted the need for a public dialogue about the future of our postal system. The book provides a starting point for that conversation," stated Nader.
