The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects, from which no comprehensive view has emerged. The volume aims to fill this gap by studying dynamic processes in the lexicon – understood in a wide sense as not being necessarily limited to the word level – by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this

way, the volume contributes to understanding the complex interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.

The Pursuit of Power BRILL

Trade is the lifeblood of the global economy, but few would consider it a social good. Instead, our views on trade have polarized between two extremes: 'free trade' ideologues who regard trade as an end in itself, and 'protectionists' who view it as a destructive force to be contained. But there is another way to trade – one with the interests of people, not profit, at its heart. In this visionary work Christian Felber, founder of the Economy for the Common Good movement, offers a dazzling new paradigm for the global trading order. Confronting the 'free trade religion' which has reigned since Adam Smith, Felber champions an alternative approach in which trade serves the wider interests of society, incorporating the key issues of our time: human rights, climate change, and the growing divide richer and poorer countries. He proposes the groundbreaking idea of an 'Ethical Trade Zone', founded on a principled approach to tariffs and trade policies, and built with international cooperation on trade, taxation and labour. Penetrating and passionate, Christian Felber

shows how this brave new economic world can be built democratically from the grassroots up, and how trading for good can be made a reality.

Since its headline-making debut, the Human Development Report has become an essential resource for development specialists, economists, and political scientists around the world. The 1992 Report not only updates the findings of the earlier volumes, but also examines the international dimensions of human development, showing how global economic growth and the expansion of the world economy have filtered down to poor economies and poor people in developing countries. In addition, it examines tpcps between human development and international markets for products, capital, and labor, addresses issues of global governance, and presents updated human development indicators for more than 160 countries.

The instant New York Times bestselling memoir of a young Jewish woman's escape from a religious sect, in the tradition of Ayaan Hirsi Ali's *Infidel* and Carolyn Jessop's *Escape*, featuring a new epilogue by the author. As a member of the strictly religious Satmar sect of Hasidic Judaism, Deborah Feldman grew up under a code of relentlessly enforced customs governing everything from what she could wear and to whom she could speak to what she was allowed to read. It was stolen moments spent with the empowered literary characters of Jane Austen and Louisa May Alcott that helped her to imagine an alternative way of life.

Trapped as a teenager in a sexually and emotionally dysfunctional marriage to a man she barely knew, the tension between Deborah's desires and her responsibilities as a good Satmar girl grew more explosive until she gave birth at nineteen and realized that, for the sake of herself and her son, she had to escape.

Machiavelli saw history in general as a way to learn useful lessons from the past for the present, and also as a type of analysis which could be built upon, as long as each generation did not forget the works of the past. In "Discourses on Livy" Machiavelli discusses what can be learned from roman period and many other eras as well, including the politics of his lifetime. This is a work of political history and philosophy written in the early 16th. The title identifies the work's subject as the first ten books of Livy's *Ab urbe condita*, which relate the expansion of Rome through the end of the Third Samnite War in 293 BC. Niccolò di Bernardo dei Machiavelli (1469 - 1527) was an Italian diplomat, politician, historian, philosopher, humanist, and writer. He has often been called the father of modern political science. He was for many years a senior official in the Florentine Republic, with responsibilities in diplomatic and military affairs. He served as a secretary to the Second Chancery of the Republic of Florence from 1498 to 1512, when the Medici were out of power. He wrote his most well-known work *The Prince* in 1513, having been exiled from city affairs.

Socialism is the watchword and the catchword of our day. The socialist idea dominates the modern spirit. The masses approve of it. It expresses the thoughts and feelings of all; it has set its seal upon our time. When history comes to tell our story it will write above the chapter "The Epoch of Socialism." As yet, it is true, Socialism has not created a society which can be said to represent its ideal. But for more than a generation the policies of civilized nations have been directed towards nothing less than a gradual realization of Socialism.¹⁷ In recent years the movement has grown noticeably in vigour and tenacity. Some nations have

sought to achieve Socialism, in its fullest sense, at a single stroke. Before our eyes Russian Bolshevism has already accomplished something which, whatever we believe to be its significance, must by the very magnitude of its design be regarded as one of the most remarkable achievements known to world history. Elsewhere no one has yet achieved so much. But with other peoples only the inner contradictions of Socialism itself and the fact that it cannot be completely realized have frustrated socialist triumph. They also have gone as far as they could under the given circumstances. Opposition in principle to Socialism there is none. Today no influential party would dare openly to advocate Private Property in the Means of Production. The word "Capitalism" expresses, for our age, the sum of all evil. Even the opponents of Socialism are dominated by socialist ideas. In seeking to combat Socialism from the standpoint of their special class interest these opponents—the parties which particularly call themselves "bourgeois" or "peasant"—admit indirectly the validity of all the essentials of socialist thought. For if it is only possible to argue against the socialist programme that it endangers the particular interests of one part of humanity, one has really affirmed Socialism. If one complains that the system of economic and social organization which is based on private property in the means of production does not sufficiently consider the interests of the community, that it serves only the purposes of single strata, and that it limits productivity; and if therefore one demands with the supporters of the various "social-political" and "social-reform" movements, state interference in all fields of economic life, then one has fundamentally accepted the principle of the socialist programme. Or again, if one can only argue against socialism that the imperfections of human nature make its realization impossible, or that it is inexpedient under existing economic conditions to proceed at once to socialization, then one merely confesses that one has capitulated to socialist ideas. The nationalist, too, affirms socialism, and objects only to its Internationalism. He wishes to combine Socialism with the ideas of Imperialism and the struggle against foreign nations. He is a national, not an international socialist; but he, also, approves of the essential principles of Socialism.

Earth building is not only one of the oldest, but also one of the most modern construction methods of our time. What economic, environmental, and social conditions are necessary for an upscaling of earth to occur? The authors present a wide scope of built and unbuilt projects as well as strategies that can be implemented to edify processes of building, adapting the use of earth to each unique culture and context. The advantages of this material become manifest: from its worldwide availability to the possibility of comprehensive recycling, from climate-neutral production to socially just implementation, including a focus on emerging economies. This book reveals the incredible potentials of earthen architecture - for people and for the entire planet.

The Star of Redemption is widely recognized as a key document of modern existential thought and a significant contribution to Jewish theology in the twentieth century. An affirmation of what

Rosenzweig called "the new thinking," the work ensconces common sense in the place of abstract, conceptual philosophizing and posits the validity of the concrete, individual human being over that of "humanity" in general. Fusing philosophy and theology, it assigns both Judaism and Christianity distinct but equally important roles in the spiritual structure of the world, and finds in both biblical religions approaches toward a comprehension of reality.

Living among other people, in their families and communities, children become aware from a very early age of questions related to justice, and they search for the meaning of the world. By fostering an understanding of human rights, shaping opinion and developing attitudes, human rights education strongly supports this natural interest and learning process. This is what human rights education is about and this is what 'Compassito manual on human rights education for children' is for. 'Compassito' is a starting point for educators, teachers and trainers who are ready to deal with human rights education with children of 7-13 years. The book covers the key concepts of human rights and children's rights, and provides substantial theoretical background to 13 key human rights issues, such as democracy, citizenship, gender equality, environment, media, poverty, and violence. The 42 practical activities serve to engage and motivate children to recognise human rights issues in their own environment. They help children to develop critical thinking, responsibility and a sense of justice, and help them learn how to take action to contribute to the betterment of their school or community. The manual also gives practical tips on how it can be used in various formal and non-formal educational settings.

The first complete English translation of a far-seeing polemic, written in 1933 by the preeminent German-language satirist, unmasking the Nazi seizure of power. Now available in English for the first time, Austrian satirist and polemicist Karl Kraus's *Third Walpurgis Night* was written in immediate response to the Nazi seizure of power in 1933 but withheld from publication for fear of

reprisals against Jews trapped in Germany. Acclaimed when finally published by Kösel Verlag in 1952, it is a devastatingly prescient exposure, giving special attention to the regime's corruption of language as masterminded by Joseph Goebbels. Bertolt Brecht wrote to Kraus that, in his indictment of Nazism, "You have disclosed the atrocities of intonation and created an ethics of language." This masterful translation, by the prizewinning translators of Kraus's *The Last Days of Mankind*, aims for clarity where Kraus had good reason to be cautious and obscure.

Friedrich Nietzsche's influence on the development of modern social sciences has not been well documented. This volume reconsiders some of Nietzsche's writings on economics and the science of state, pioneering a line of research up to now unavailable in English. This book presents the current state of the art in Social Ecology as practiced by the Vienna School of Social Ecology, globally one of the main research groups in this field. As a significant contribution to the growing literature on interdisciplinary sustainability studies, the book introduces the purpose and nature of Social Ecology and then places the "Vienna School" within the broader context of socioecological and other interdisciplinary environmental approaches. The conceptual and methodological foundations of Social Ecology are discussed in detail, allowing the reader to obtain a broad overview of current socioecological thinking. Issues covered include socio-metabolic transitions, socioecological approaches to land use, the relation between actor-centered and system approaches, a socioecological theory of labor and the importance of legacies, as conceived in Environmental History and in Long-Term Socio-Ecological Research. To underpin this overview empirically, the strengths of socioecological research are elucidated in cases of cutting-edge research, introducing a variety of themes the Vienna School has been tackling empirically over the past years. Given how the field is presented - reflecting research carried out on different scales, reaching from local to global as well as from past to present and future - and due to the way the book is structured, it is suitable for classroom use, as a primer, and also as an overview of how Social Ecology evolved, right up to its current research frontiers.
