Recent studies on diverse aspects of the biology of clitellate works (oligochaetes and leeches) are found in the Proceedings of the most recent International Symposium on Aquatic Oligochaete Biology - from development to population dynamics and from ultrastructure to evolution. The majority of the contributions, which have a very broad geographic scope, are investigations of the biology and ecology of oligochaete works in natural and polluted waters.

These Rebel Waves BRILL

Que celui n'ayant jamais commis une faute d'orthographe jette la première pierre à cet apprenant étranger ! Nul n'est en mesure de le faire, car nous avons tous, un jour ou l'autre, écorché la graphie de $n + 1$ mots de notre belle langue et continuons de le faire, par inadvertance le plus souvent, par méconnaissance occasionnellement. L'intérêt de cet ouvrage est de mettre en lumière les difficultés prégnantes des apprenants étrangers et natifs quand ils se frottent à l'orthographe française. Une plongée dans les tréfonds de l'être humain allophone (non natif), puis au coeur du processus d'apprentissage et dans les méandres de

l'objet orthographique français nous fera découvrir une complexité riche de sens sur le plan théorique : y sera entre autres souligné le fonctionnement initial différent de l'apprenant allophone (exposé à une langue étrangère) par rapport à son confrère endophone (exposé à sa langue maternelle). Du point de vue pratique, les expériences menées sur le terrain - analyse de copies, exercice à trous sur la graphie des homonymes, suivi d'un entretien, et dictée de Fénelon - mettront en évidence le " handicap " phonologique des apprenants allophones, lequel est compensé par un avantage au niveau morphosyntaxique. Si les étudiants étrangers éprouvent des difficultés à distinguer certains phonèmes du français, ils sont en revanche favorisés dans l'écriture des homonymes et des lettres étymologiques / historiques. Les lettres morphologiques, quant à elles, sont une source d'erreurs tant chez les allophones que chez les endophones. S'ensuivra une réflexion sur les difficultés orthographiques spécifiques aux deux groupes d'apprenants, avec mise en exergue de leurs représentations sous-jacentes (représentation phonographique de l'orthographe chez les étrangers, représentation normative chez les natifs). Cet approfondissement donnera lieu à des suggestions de remédiation ainsi qu'à des propositions de fiches pédagogiques combinant harmonieusement sens et forme, de manière à redonner du sens aux graphies. --Payot.ch

This book presents a wide range of contributions addressing diverse aspects of biodiversity exploitation and conservation. These collectively provide a snapshot of ongoing action and state-of-the-art research, rather than a series of necessarily more

superficial overviews. Examples presented here derive from studies in 17 countries including Africa, Asia, Europe, and North and South America. These reports will stimulate future work toward attaining a sustainable balance between the conservation and exploitation of biodiversity.

Microchiropteran Bats Springer Science & Business Media
Times Literary Supplement • Books of the Year ("The most generous available English collection of Brecht's poetry.") A landmark literary event, *The Collected Poems of Bertolt Brecht* is the most extensive English translation of Brecht's poetry to date. Widely celebrated as the greatest German playwright of the twentieth century, Bertolt Brecht was also, as George Steiner observed, "that very rare phenomenon, a great poet, for whom poetry is an almost everyday visitation and drawing of breath." Hugely prolific, Brecht also wrote more than two thousand poems—though fewer than half were published in his lifetime, and early translations were heavily censored. Now, award-winning translators David Constantine and Tom Kuhn have heroically translated more than 1,200 poems in the most comprehensive English collection of Brecht's poetry to date. Written between 1913 and 1956, these poems celebrate Brecht's unquenchable "love of life, the desire for better and more of it," and reflect the technical virtuosity of an artist driven by bitter and violent politics, as well as by the untrammelled forces of love and erotic desire. A monumental achievement and a reclamation, *The Collected Poems of Bertolt Brecht* is a must-have for any lover of twentieth-century poetry.

Climate is a paradigm of a complex system. Analysing climate

data is an exciting challenge, which is increased by non-normal distributional shape, serial dependence, uneven spacing and timescale uncertainties. This book presents bootstrap resampling as a computing-intensive method able to meet the challenge. It shows the bootstrap to perform reliably in the most important statistical estimation techniques: regression, spectral analysis, extreme values and correlation. This book is written for climatologists and applied statisticians. It explains step by step the bootstrap algorithms (including novel adaptations) and methods for confidence interval construction. It tests the accuracy of the algorithms by means of Monte Carlo experiments. It analyses a large array of climate time series, giving a detailed account on the data and the associated climatological questions. This makes the book self-contained for graduate students and researchers.

A sobering but important and enlightening book, *A Farewell to Ice* moves smoothly through explanations ice's role on our planet, its history, and the current global crisis that is climate change, finally offering tangible efforts readers can make as citizens, which are particularly relevant in the face of reluctant government powers.

Proving fruitful in various applications throughout its two millennia of predominance, the rhetorical *téchne* appears to have entertained a particularly symbiotic interrelation with drama. With contributions from (among others) a Classicist, historical,

linguistic, musicological, operatic, cultural and literary studies perspective, this publication offers interdisciplinary assessments of specific reciprocities between the system of rhetoric and dramatic works: tracing the *longue durée* of this nexus—highlighting its Ancient foundations, its various Early Modern formations, as well as certain configurations enduring to this day—enables describing shifting degrees of rhetoricity; approaching it from an interdisciplinary viewpoint facilitates focusing on the often sidelined rhetorical phenomena located beyond the textual plane, specifically *memoria* and *actio*; tackling this interchange from various viewpoints and with diverse emphases, a long-lasting and highly prolific cross-fertilization between drama and rhetoric is rendered visible. In tendering a balanced panorama of both detailed case studies and descriptive overviews, this volume also points toward terrain yet to be charted in the scholarship to come. The volume was prepared in co-operation with the ERC Advanced Grant Project Early Modern European Drama and the Cultural Net (DramaNet).

Abraham Zacut (1452-1515) of Salamanca was an outstanding intellectual figure in the Spanish Jewish community on the eve of the expulsion in 1492. His scientific work began in the 1470s, & continued in exile, in Portugal, N. Africa, & ultimately in Jerusalem. This monograph focuses on some of his important contributions to astronomy, namely, those that appear in the book published in Leiria, Portugal, in 1496, generally known as the “*Almanach Perpetuum*”; this publication is to be distinguished from “*ha-Hibbur ha-gadol*” (“*The Great Composition*”) that Zacut composed in Hebrew in 1478. Indeed, one of the findings in the

course of research for this vol. is that these are distinct works. Bibliography. Charts & tables.

An international team of distinguished scholars have each contributed a chapter to produce an advanced, full length, physical geography of Africa. The first part provides an overview of both pan-Africa patterns in the physical environment and those attributes of African physical geography that are distinctive by considering the development of the main features through time. The authors also provide a synoptic review of Francophone and Anglophone literature on the subject, discuss the present state of knowledge, and set out the work and methods that have created it. This part is followed by a group of chapters that integrate such topics as geomorphology, biogeography, environmental change and hydrology within each of the major biomes - forest, savannah, desert, coast, wetland, mountain, Mediterranean and Rift Valley - found in the African continent. Finally there is a section in which various authors look at topical issues concerned with the impact of human activity on the environment.

Conservation and development are considered in the light of issues such as soil erosion, desertification, and biodiversity and biodepletion. The authors have produced this integrated physical geography in honour of A.T. Grove as a durable reference work which gives a new perspective on the continent of Africa.

Something Fantastic is the multifaceted manifesto of three young architects - Julian Schubert, Elena Schütz and Leonard Streich. It is also the name of their new Berlin-based studio; both book and

studio derive from a diploma thesis at the University of the Arts, Berlin. Something Fantastic calls for increased consciousness in architectural thought and action, particularly in relation to the environment, energy and contemporary politics. Excerpts from thinkers and theorists - from Thomas Hobbes to Ludwig Mies van der Rohe - and interviews, including with Markus Miessen and Werner Sobek, inform a publication determined to call for change, and offer hope for the future.

Clays and soils are of great importance in various scientific fields, such as agriculture and environmental science, and in mineral deposits. Students and close collaborators of Georges Millot, the eminent French clay sedimentologist, have put together a book with topics ranging from weathering processes and diagenetic evaluation of sediments to sedimentary mineral deposits. The book is of interest to practitioners, advanced students as well as teachers in the above fields.

An international team of over 150 experts provide up-to-date satellite imaging and quantitative analysis of the state and dynamics of the glaciers around the world, and they provide an

in-depth review of analysis methodologies. Includes an e-published supplement. Global Land Ice Measurements from Space - Satellite Multispectral Imaging of Glaciers (GLIMS book for short) is the leading state-of-the-art technical and interpretive presentation of satellite image data and analysis of the changing state of the world's glaciers. The book is the most definitive, comprehensive product of a global glacier remote sensing consortium, Global Land Ice Measurements from Space (GLIMS, <http://www.glims.org>). With 33 chapters and a companion e-supplement, the world's foremost experts in satellite image analysis of glaciers analyze the current state and recent and possible future changes of glaciers across the globe and interpret these findings for policy planners. Climate change is with us for some time to come, and its impacts are being felt by the world's population. The GLIMS Book, to be released about the same time as the IPCC's 5th Assessment report on global climate warming, buttresses and adds rich details and authority to the global change community's understanding of climate change impacts on the cryosphere. This will be a definitive and technically complete reference for experts and students examining the responses of glaciers to climate change. World experts demonstrate that glaciers are changing in response to the ongoing climatic upheaval in addition to other factors that pertain to the circumstances of individual glaciers. The global mosaic of glacier changes is documented by quantitative analyses and are placed into a perspective of causative factors. Starting with a Foreword, Preface, and Introduction, the GLIMS book gives the rationale for and history of glacier monitoring and satellite data analysis. It includes a comprehensive set of six "how-to" methodology

chapters, twenty-five chapters detailing regional glacier state and dynamical changes, and an in-depth summary and interpretation chapter placing the observed glacier changes into a global context of the coupled atmosphere-land-ocean system. An accompanying e-supplement will include oversize imagery and other other highly visual renderings of scientific data.

The Isle of Pines (1668) UNEP/Earthprint

A thrilling new fantasy series—full of deadly magic, double crosses, and a dangerous quest in a new world—from Sara Raasch, the New York Times bestselling author of the Snow Like Ashes series. Adeluna is a soldier. Five years ago, she helped the magic-rich island of Grace Loray overthrow its oppressor, Argrid, a country ruled by religion. But adjusting to postwar life has not been easy. When an Argridian delegate vanishes during peace talks with Grace Loray's new Council, Argrid demands brutal justice—but Lu suspects something dangerous is at work. Devereux is a pirate. As one of the stream raiders who run rampant on Grace Loray, he scavenges the island's magic plants and sells them on the black market. But after Argrid accuses raiders of the diplomat's abduction, Vex becomes a target. An expert navigator, he agrees to help Lu find the Argridian—but the truth they uncover could be deadlier than any war. Benat is a heretic. The crown prince of Argrid, he harbors a secret obsession with Grace Loray's forbidden magic. When Ben's father, the king, gives him the shocking task of reversing Argrid's fear of magic, Ben has to decide if one prince can change a devout country—or

if he's building his own pyre. As conspiracies arise, Lu, Vex, and Ben will have to decide who they really are . . . and what they are willing to become for peace.

Freshwater Benthic Diatoms of Central Europe Cambridge University Press

Published by the American Geophysical Union as part of the Antarctic Research Series, Volume 79. The Antarctic Peninsula region represents our best natural laboratory to investigate how earth's major climate systems interact and how such systems respond to rapid regional warming. The scale of environmental changes now taking place across the region is large and their pace rapid but the subsystems involved are still small enough to observe and accurately document cause and affect mechanisms. For example, clarification of ice shelf stability via the Larsen Ice Shelf is vital to understanding the entire Antarctic Ice Sheet, its climate evolution, and its response to and control of sea level. By encompassing the broadest range of interdisciplinary studies, this volume provides the global change research and educational communities a framework in which to advance our knowledge of the causes behind regional warming, the dramatic glacial and ecological responses, and the potential uniqueness of the event within the region's paleoclimate record. The volume also serves as a vital resource for public policy and governmental funding agencies as well as a means to educate the large number of ecotourists that visit the region each austral summer.
