This guide is the standard reference work for recognizing learning acquired by military personnel for conversion to academic credit in degree work at colleges and universities. This volume contains recommendations for formal courses offered by the Air Force, the Coast Guard, the Marine Corps, and the Department of Defense in 1990 and later years. Twenty sections provide the following information: (1) how to find and use course exhibits; (2) sample Coast Guard Rating exhibit; (3) how to find and use Coast Guard occupation exhibits; (4) sample Coast Guard rating exhibit; (5) how to find and use Coast Guard warrant officer exhibits; (6) sample Coast Guard warrant officer exhibit; (7) how to find and use Marine Corps MOS (military occupational specialties) exhibits; (8) sample Marine Corps enlisted MOS exhibit; (9) questions and answers; (10) awarding credit for extrainstitutional learning; (11)

transfer and award of credit; (12) elements of a model policy on awarding credit for extracurricular learning; (13) Air Force course exhibits; (14) Coast Guard course exhibits; (15) Department of Defense course exhibits; (16) Marine Corps course exhibits; (17) Coast Guard aviator exhibits; (18) Coast Guard enlisted ratings exhibits; (19) Coast Guard warrant officer exhibits; and (20) Marine Corps enlisted MOS exhibits. Each course exhibit includes some or all of the following: course number, title, location, length, dates, learning outcomes, instruction, occupational group, description, career pattern, related occupations, and credit recommendation. The guide also contains eight appendixes: the evaluation systems, sample military records, occupation title index, keyword index, course number index, request for course recommendation, and request for Coast Guard rating and warrant officer exhibits, and request for Marine Corps MOS exhibits. (KC)

Lloyd's Maritime Asia Elsevier

Internationally acknowledged as the best one-volume reference to the world's naval and parnaval forces, this popular Naval Institute guide is both comprehensive and affordable.

Yachting Lloyd's Register

In recent years much attention has been paid to safety of navigation and marine transportation. Marine Navigation and Safety of Sea Transportation addresses the main aspects of marine safety, including: safety of navigation; manoeuvring and ship-handling systems; marine traffic control and automatic identification systems; navigation tools, system

This is the story of how private foreign enterprise in the form of Swedish Lloyd and Swedish America Line, who formed a British company called 'Hoverlloyd', galvanised the British Government in to supporting this new concept in transport through the formation of a British Rail subsidiary called 'Seaspeed'.

A Guide to the Evaluation of Educational Experiences in the Armed Services World Scientific

Inland & Maritime Waterways & Ports: Design, Construction, and Operation covers the proceedings of the technical sessions in the 25th Permanent International Association of Navigation Congress, held in Scotland. This book is organized into two sections encompassing 10 chapters. The first section deals first with means for the protection of banks and bottom waterways against the attack by currents and waves, including those generated by ships. These topics are followed by discussions on methods of increasing waterways capacity and safety; sedimentation reduction and improving and maintaining navigable depths in alluvial channels; integration of ocean-coastal-inland navigation; and improvements of maritime ports and inland terminals. The second section starts with discussions of the developments in the construction of ships, navigational aids, waterways and harbors, traffic management and installations, with particular emphasis on risk analysis and safety criteria regarding transportation, unloading, and storage of liquefied natural and petroleum gases. Other topics covered in this section include economic optimization of the whole dredging cycle; cargo handling systems

and equipment; design and construction of port facilities and arrangement of quay platforms; and coastal erosion caused by harbor works and corrective measures. This book will prove useful to design and navigation engineers and researchers.

Proceedings Bloomsbury Publishing

With the rapid development of machinery, materials science and energy engineering technology in China, new theories and application results constantly appear. Higher and newer requirements in these fields are sought by business enterprises and members of the engineering profession. This conference was held to further promote the exchange and cooperation among local researchers, to upgrade the academic standards and international influence on the study of these fields in China, and to play a positive role in bridging the gap with the international research community. This volume consists of 106 peer-reviewed articles by local and foreign eminent scholars which cover the frontiers and hot topics in machinery and process equipment, materials science, energy engineering and mechatronics.

British Motorship US Naval Institute Press

First published in 1971, these Guides provide invaluable information on thousands of commercial ports and terminals across the globe. They are compiled and published annually by LR OneOcean, whose years of global maritime experience allows them to provide expert and innovative solutions that enhance efficiency, sustainability, and overall industry success. The Guides cover a significant geographical breadth, and the most recent volume includes information on over 12,500 ports, harbours and terminals worldwide. These are fully indexed and contain detailed port plans and mooring diagrams.

The Motor Ship Greenwood

The Nimitz class aircraft carrier is the ultimate symbol of the United States superpower status. A true behemoth, this is an unsurpassed weapons platform that overshadows all of its nearest rivals. A history of the world's largest aircraft carriers, with runways over 300 meters long, this book looks at the development and deployment of the nuclear-powered Nimitz class aircraft carriers from 1975 when the USS Nimitz, the lead ship of the class, was commissioned, to the present day. All of the class are still operational and the tenth and last of the class, the USS George H. W. Bush, was commissioned in 2009. Here, Brad Elward provides a detailed overview of their design and development, highlighting their unique features, from jet blast deflectors to cutting edge radar systems, and a history of the Nimitz class in service, from deployment in the Gulf during Operation Desert Storm, through to the enforcement of the no fly zone over Bosnia.

Marine Engineers Review Greenwood

Jane's Fighting Ships is your essential reference to the world's navies. Country by country, you will find authoritative commentaries for each ship, complete with comprehensive details of: displacement and dimensions, main machinery, speed and range, weapons systems, construction and modernisation programmes, latest operational status and strength of fleet including sales to other navies.
