At the request of Springer-Verlag, Heidelberg, I have written with pride and pleasure the new edition of the Manual of Aesthetic Surgery. Volumes 1 (head and neck region) and 2 (body) have been integrated into one volume, which has been revised and extended with the addition of the topics "Cosmetic Aesthetic Surgery," "Breast Surgery," "Mini Lift," "Mini Abdomen," "Buttock Lift," and "Tumescence Li-suction with the MicroAire® System." The current trend is towards gentle surgical methods. The 'Mang School' has as its motto: Less is more! You should not see cosmetic surgery. Aesthetic surgery is feel-good surgery and not altering surgery. That should be the philosophy of this book. The first editions of both volumes of the Manual of Aesthetic Surgery had high print runs and were translated into many languages, including Spanish, Russian, and Chinese. The new edition bridges a few gaps, namely breast lifting and breast reduction. These operations are described in detail in order to provide also plastic and aesthetic surgeons with standards. Standards are of crucial importance in aesthetic surgery. Results must be reproducible. Every aesthetic surgeon will then be able to build on this manual and refine his or her methods.

"Today, nonsurgical cosmetic treatments, such as injectables, continue to gain in popularity, whereas the decline we had seen in some surgical approaches to facial rejuvenation seems to be reversing. Nowhere is this change more dramatic than in the area of brow rejuvenation. Another important trend has been the emphasis on volume enhancement in periorbital and facial rejuvenation, as well as surgery of the breast. In keeping with these trends, we have increased coverage of nonsurgical treatments and injectables and have added new sections and chapters dealing with volume and its role in facial rejuvenation and the role of fat grafting in breast surgery"--

The second edition of Operative Plastic Surgery is a fully-updated, comprehensive text that discusses the most common plastic surgery procedures in great detail. It covers the classic techniques in plastic surgery, as well as the most recent technical advances, while maintaining a systematic approach to patient care within each chapter. Traversing the entirety of the human body, each chapter addresses assessment of defects, preoperative factors, pathology, trauma, operative indications and procedure, and more. Also covered is the operative room setup, with special consideration given to the operative plan, patient positioning and markings, and technique for each type of surgery. Detailing over 90 specific surgical techniques, this book covers both reconstructive and aesthetic plastic surgery. A new section addresses non-invasive techniques such as Botox, injectables, lasers, and skincare. New chapters throughout the book also include ALT flaps, nasal cleft deformities, ZMC fractures, augmentation mastopexy, body contouring for the massive weight loss patient, and endoscopic carpal tunnel repair. Led by Gregory R.D. Evans, this volume assembles thought leaders in plastic surgery to present operative surgery in a clear, didactic, and comprehensive manner, and lays the groundwork for ideas that we have just scratched the surface of, such as translational research, fat grafting, stem cells, and tissue

engineering.
