This e-book package contains a copy of International Medical Guide for Ships Third edition and a copy of the Quantification Addendum which contains recommended quantities indications

and dosing for 55 medicines listed in the International Medical Guide for Ships 3rd edition. The third edition of the International Medical Guide for Ships shows designated first-aid providers how to diagnose treat and prevent the health problems of seafarers on board ship. Since its first publication in 1967 the International Medical Guide for Ships has been a standard reference for medical care on board ships. The second edition written in 1988 was translated into more than 30 languages and has been used in tens of thousands of ships. This the third edition contains fully updated recommendations aimed to promote and protect the health of seafarers and is consistent with the latest revisions of both the WHO Model List of Essential Medicines and the International Health Regulations. The International Labour Organization's Maritime Labour Convention 2006 stipulates that all ships shall carry a medicine chest medical equipment and a medical guide. The International Medical Guide for Ships supports a main principal of that convention; to ensure that seafarers are given health protection and medical care as comparable as possible to that which is generally available to workers ashore. By carrying this guide on board ships and following its instructions countries can both fulfill their obligations under the terms of the

Maritime Labour Convention 2006 and ensure the best possible health outcomes for their seafaring population. The Quantification Addendum contains recommended quantities indications and dosing for 55 medicines listed in the International Medical Guide for Ships 3rd edition. The quantities are based on three types of ships: . ocean-going ships with crews of 25-40 and no doctor (Category A); . coastal ships with crews of up to 25 that travel no more than 24 hours from a port of call (Category B); and . small boats and private craft with crews of 15 or less and usually travelling no more than a few hours from a port of call (Category C). These quantities have been updated to reflect the decrease of crew numbers on most ships and calculated for voyages of one month. This companion volume to the International Medical Guide for Ships provides essential guidance to all those who involved in the procurement purchasing stock maintenance and use of medicines to promote and protect the health of seafarers worldwide.

Scour at Bridge Foundations on Rock Routledge

"This report provides a methodology for estimating the time rate of scour and the design scour depth for a bridge founded on rock, as well as design and construction guidelines for application of the methodology. It will be of interest to hydraulic, bridge, and geotechnical engineers responsible for designing bridge foundations on rock or maintenance engineers concerned about existing bridges founded on erodible rock."--Foreword.

Bridge Scour Quintessenza

Covers seismic design for typical bridge types and applies to non-critical and non-essential bridges. Approved as an alternate to the seismic provisions in the AASHTO LRFD Bridge Design Specifications. Differs from the current procedures in the LRFD Specifications in the use of displacement-based design procedures, instead of the traditional force-based "R-Factor" method. Includes detailed guidance and commentary on earthquake resisting elements and systems, global design strategies, demand modeling, capacity calculation, and liquefaction effects. Capacity design procedures underpin the Guide Specifications' methodology; includes prescriptive detailing for plastic hinging regions and design requirements for capacity protection of those elements that should not experience damage.

This document presents a synthesis of current information and operating practices related to roadside safety and is developed in metric units. The roadside is defined as that area beyond the traveled way (driving lanes) and the shoulder (if any) of the roadway itself. The focus of this guide is on safety treatments that minimize the likelihood of serious injuries when a driver runs off the road. This guide replaces the 1989 AASHTO "Roadside Design Guide."

The ISM Code has been mandatory for almost every commercial vessel in the world for more than a decade and nearly two decades for high risk vessels, yet there is very little case law in this area. Consequently, there remains a great deal of confusion about the potential legal and insurance implications of the Code. This third edition represents a major re-write and addresses significant amendments that were made to the ISM Code on 1st

July 2010 and 1st January 2015. This book provides practitioners with a practical overview of, and much needed guidance on, the potential implications of failing to implement the requirements of the Code. It will be hugely valuable to DPAs, managers of ship operating companies, ship masters, maritime lawyers and insurance claims staff.

Many transportation departments have significant practical experience with bridge preservation and have developed conclusions regarding the effectiveness of bridge preservation actions based on those experiences. However, limited efforts have been made to identify, measure, evaluate, and document the short- and long-term performance of specific bridge preservation actions. The TRB National Cooperative Highway Research Program's NCHRP Research Report 950: Proposed AASHTO Guides for Bridge Preservation Actions presents the development of two AASHTO guides for bridge preservation, including a general guide to preservation of highway bridges and a guide to preservation of highway bridge decks. Supplementary to the report is Appendix B: Summaries of Information from State DOTs.
