The 1982 statistics on the  
use of family planning and  
infertility services  
presented in this report  
are preliminary results  
from Cycle III of the  
National Survey of Family  
Growth (NSFG), conducted  
by the National Center for

Health Statistics. Data  
were collected through  
personal interviews with a  
multistage area  
probability sample of  
7969 women aged 15-44.  
A detailed series of  
questions was asked to  
obtain relatively complete  
estimates of the extent  
and type of family  
planning services

received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%) or Hispanic (77%) wives, or between the 2 income groups. The 1982 survey questions were more comprehensive than

those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits /1000 women. Teenagers had the highest annual visit rate (1581/1000) of any age group for all sources of family planning services combined. Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for

black women (1334/1000) was significantly higher than that for white women (1033). The highest overall visit rate was for black women 15-19 years of age (1867/1000). Nearly 2/3 of all family planning visits were to private medical sources. Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources, as did black women age 15-24. White women age 20 and older had higher visit rates to private medical services than to clinics.

Never married women had higher visit rates to clinics than currently or formerly married women. Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term. About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview. During the 3 years before interview, about 1.9 million women had infertility visits. For all ever married women, as well as for white and black

women separately, infertility services were more likely to be secured from private medical sources than from clinics. The survey design, reliability of the estimates and the terms used are explained in the technical notes.

*Master Register of Bicentennial Projects, February 1976* Springer Science & Business Media  
This book provides a thorough discussion of acceptance and commitment therapy or training (ACT) and a guide for its use by behavior

analysts. The book emphasizes how the intentional development of six core behavioral processes – values, committed action, acceptance, defusion, self-as-context, and present moment awareness – help establish the psychological flexibility needed to acquire and maintain adaptive behaviors that compete with maladaptive behavior patterns in verbally able clients. Split into three parts, the book discusses the history and

controversy surrounding the rise of acceptance and commitment strategies in behavior analysis and shows how the processes underlying ACT are linked to foundational behavioral scientific principles as amplified by stimulus equivalence and relational learning principles such as those addressed by relational frame theory. In a careful step-by-step way, it describes the best practices for administering the acceptance and commitment procedures at the level of the

individual client, organizational systems, and with families. Attention is also given to the ethical and scope-of-practice considerations for behavior analysts, along with recommendations for conducting on-going research on this new frontier for behavior analytic treatment across a myriad of populations and behaviors. Written by leading experts in the field, the book argues that practice must proceed from the basic tenants of behavior analysis, and that now is the opportune

moment to bring ACT methods to behavior analysts to maximize the scope and depth of behavioral treatments for all people. Acceptance and Commitment Therapy for Behavior Analysts will be an essential read for students of behavior analysis and behavior therapy, as well as for individuals on graduate training programs that prepare behavior analysts and professionals that are likely to use ACT in their clinical practice and research.

### Analysis and Calorimetry

CRC Press

This book describes the basic physical principles of techniques to generate and ultrashort pulse lasers and applications to ultrafast spectroscopy of various materials covering chemical molecular compounds, solid-state materials, exotic novel materials including topological materials, biological molecules and bio- and synthetic polymers. It introduces non-linear optics which provides the basics of generation and

measurement of pulses and application examples of ultrafast spectroscopy to solid state physics. Also it provide not only material properties but also material processing procedures. The book describes also details of the world shortest visible laser and DUV lasers developed by the author's group. It is composed of the following 12 Sections: The special features of this book is that it is written by a single author with a few collaborators in a systematic way. Hence it provides a

comprehensive and systematic description of the research field of ultrashort pulse lasers and ultrafast spectroscopy. Generation of ultrashort pulses in deep ultraviolet to near infrared Generation of ultrashort pulses in terahertz Carrier envelope phase (CEP) Simple NLO processes with a few colors Multi-color involved NLO processes Multi-color ultrashort pulse generation NLO materials NLO processes in time-resolved spectroscopy Low dimension materials

Dealing with dynamics of processes that repeat themselves regularly, this revised and updated edition extends the thread from 1980 to the present day, concentrating on areas of interest where there will be much activity in the future. This involves going through spatial biochemical, electrophysiological, and organismic dynamical systems and patterns that were discovered by

pursuing the theme of phase singularities introduced in the original book. In particular the work on excitability in cell membranes will be thoroughly updated as will the references throughout the book.

### **Engineered Materials**

**Abstracts** Springer Publishing Company  
During the past decade, fluorescence techniques have come to occupy a position of central importance in biochemistry. Such areas as laser techniques, radiation less energy

transfer, and nanosecond fluorometry have evolved from esoteric research specialties into standard procedures that are applied routinely to bio chemical problems. Indeed, discussion of the above three areas occupies the greater part of this book. Its level and approach are appropriate for the bio logical or physical scientist who is interested in applying fluorescence techniques, but is not necessarily an expert in this area. The coverage of the literature has, in general, been

selective rather than exhaustive. It is likely that what is summarized here will prove resistant to the erosion of time and provide a basis for the future evolution of this rapidly developing area of science. Robert F. Steiner

The Geometry of  
Biological Time Taylor &  
Francis  
This work proposes the  
multilayered information  
fusion system MACRO  
(multilayer attribute-  
based conflict-reducing  
observation) and the  
 $\mu$ BaTLCS (fuzzified  
balanced two-layer  
conflict solving) fusion  
algorithm to reduce the  
impact of conflicts on the  
fusion result. In addition,  
a sensor defect detection  
method, which is based  
on the continuous  
monitoring of sensor  
reliabilities, is presented.

The performances of the  
contributions are shown  
by their evaluation in the  
scope of both a publicly  
available data set and a  
machine condition  
monitoring application  
under laboratory  
conditions. Here, the  
MACRO system yields the  
best results compared to  
state-of-the-art fusion  
mechanisms.  
**NBS Special  
Publication** National  
Academies Press  
This is an expanded and  
revised second edition,  
presenting accurate and  
comprehensive

information about our leading thermal scientists to current and future generations. In our globalized world, most researchers in thermal analysis do not know each other in person and are not familiar with each other's achievements. This volume provides the reader with an up-to-date list of the prominent members in this community. The publication contains only living scientists. The selection is based partly on several decades of the editors' personal

professional experience and also partly on the opinion of the Regional Editors of the Journal of Thermal Analysis and Calorimetry.

### **ABC Relaxation Theory**

Relaxation is the world's most popular therapy-- used by more psychologists, counselors, social workers, and rehabilitation specialists than any other tool. ABC Relaxation Theory offers a new treatment strategy by presenting and enhancing the effectiveness of current relaxation treatments into

an approach tailored to each client. Based on the most ambitious scientific exploration of relaxation (20 studies and 5,000 subjects from all cultures and walks of life), Smith presents some of his groundbreaking findings, including the first demonstration and replication of differences among African Americans, Latinos, and Whites; men and women; those with religious and secular beliefs approaches; and more. His work is highly readable, practical, and comprehensive and will

appeal to clinical psychologists, psychotherapists, and students of psychology.

### **Wildlife Abstracts**

For more than 30 years, Yoga Journal has been helping readers achieve the balance and well-being they seek in their everyday lives. With every issue, Yoga Journal strives to inform and empower readers to make lifestyle choices that are healthy for their bodies and minds. We are dedicated to providing in-depth, thoughtful editorial on topics such as yoga, food,

nutrition, fitness, wellness, travel, and fashion and beauty.

### **Gentleman's Magazine and Historical Review**

Cities and Their Vital Systems asks basic questions about the longevity, utility, and nature of urban infrastructures; analyzes how they grow, interact, and change; and asks how, when, and at what cost they should be replaced. Among the topics discussed are problems arising from increasing air travel and airport congestion; the

adequacy of water supplies and waste treatment; the impact of new technologies on construction; urban real estate values; and the field of "telematics," the combination of computers and telecommunications that makes money machines and national newspapers possible. *Information Fusion Under Consideration of Conflicting Input Signals* Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces

documents that have recently been entered into the NASA Scientific and Technical Information Database.
