**FRCR Physics MCQs in Clinical Radiology** Elsevier Health Sciences

Exclusively focused on preparing candidates for the FRCR Part 1 anatomy viewing paper, this book enables them to practice questions that have the look and feel of the actual exam. Containing eight practice examinations, each with 20 cases which have been thoroughly reviewed and tested by radiology registrars who have sat the exam, the questions are at increasing levels of difficulty. Screenshots from Osirix and advice on how to approach the exam familiarize candidates with its format. Each exam in the book contains a wide selection of images with all body parts and modalities equally represented to thoroughly test candidates interpretation skills. The 160 images cover all major plain films, CT, MRI, barium studies and other contrast examinations, as well as some of the newer techniques, based on the examples published online by the Royal College of Radiologists.

Knowledge of scientific principles is also mandated as a result of a need to understand best and safest practice, especially in the use of ionising radiation where legislation, guidance and risk all form part of a medical specialists' pressures at work. It is no surprise therefore that radiologists are obliged to study and pass physics exams. Such exams can present a considerable challenge and the authors of this work recognise and sympathise with that challenge and have created a volume which that is intended to be an educational resource and not just a pre-exam 'crammer.' Both authors have considerable experience in teaching, supporting and examining in medical science and have developed an awareness of where those sitting professional exams have traditionally struggled. This text is a distillation of that experience.

The optimal use of magnetic resonance imaging poses a constant challenge as the technology is continually and rapidly advancing. This leaves the MR practitioner, beginner or experienced, in constant need of up-to-date, easily read and well illustrated material presenting the clinical constellation of pathologies as seen by an MRI scanner in such an

The new FRCR part 1 Anatomy examination comprises 20 cases/images, with five questions about each. The cases are labelled 01 to 20 and the five questions are labelled (a) to (e). The authors have set out to emulate this format by gathering 200 cases which, from their experience, are representative of the cases on which candidates will be tested. The book consists of 10 tests with 20 cases each, and 5 stem questions each. The answers, along with an explanation and tips, accompany each test at the end of the chapter. This will help candidates to identify the level of anatomical knowledge expected by the Royal College of Radiologists. The aim of this book is not to replace the already available literature in radiological anatomy, but to complement it as a revision guide. Whereas radiological anatomy atlases and textbooks provide images with labels for every possible identifiable structure in an investigation, the cases in this book have only 5 labels, simulating the exam.

First FRCR Anatomy: Questions and Answers provides eight test papers modelled on the exam format of the Royal College of Radiologists' anatomy module. Written by a team of consultant and trainee radiologists, the practice questions and answers will give you the advantage you need to succeed and stand out from the average trainee. The questions include images from all modalities - CT, MRI, ultrasound, plain film, screening and angiography, closely correlating with the images you are likely to see both in the exam and in day-to-day practice. Expanded clinical answers also distill

clinical radiological knowledge accrued over many years of clinical practice, making this much more than a revision aid. First FRCR Anatomy: Questions and Answers covers the full breadth of curriculum topics including MSK, cardiac, thoracic, genitourinary, gastrointestinal, vascular, neuro and pediatric imaging. An essential resource for all First FRCR candidates.

It includes questions arranged in nine sets of 40 MCQs following the examination format. Additionally, chapters cover explanation to some of the answers for better understanding of the topics. The book covers updated syllabus of Royal College of Radiology (RCR), UK on scientific basis of medical imaging, including topics in molecular imaging. Each chapter with a practice set comprises of questions arranged in the order of the syllabus of the examination, starting from the basis of medical imaging and radiation physics to the principles of specific modalities and safety issues. This book offers assistance to candidates preparing for the first FRCR examination, clinical radiology trainees, and radiology and nuclear medicine postgraduate students.

*Applied Radiological Anatomy for Medical Students* Cambridge University Press

This book gets to the heart of what radiology is and what radiologists do. As a relatively young speciality, there is no guide for radiologists to act as a moral compass. Until now, that is. You will not find any dry technical matters in here. You will not find any clues about how to interpret images better. This book details the 'other 50%': the rest of the working week when a radiologist is not reading scans or performing procedures. The essence of radiology is distilled and offered up to the reader. If you want a comfortable read that offers bland reassurances, look elsewhere. If you want a

book that questions everything and discusses uncomfortable truths, this is the book for you. Each of the Rules addresses an important part of professional practice. This book is a manifesto for all radiologists across the globe to raise their game, to be more effective and to serve their patients better.

**Practical Radiological Anatomy** Cambridge University Press

Adopts a systemic approach to cover common clinical problems that are encountered on the wards, in tutorials and in examinations.

*Core Radiology* Oxford University Press, USA

The Royal College of Radiologists' First Anatomy module aims to ensure that this critical area in the interpretation of radiological images is thoroughly learned in the first year of training. This revision aid includes ten FRCR Part 1 practice exams with answers, equating to 200 high quality radiological images of normal anatomy that include CT, MRI, Ultrasound, Fluoroscopic studies and plain radiography. Following the examination format, five questions are set for each image, while detailed answers, clinical points and gems provide explanations and highlight learning points. This book will be ideal for trainees sitting the First FRCR examination, but also for those in other surgical or medical specialties who are exposed to radiology on a daily basis and wish to increase their understanding of radiological studies. Medical students and prospective radiology trainees may also find this book a helpful introduction and revision aid. 'A comprehensive, well structured and above all highly relevant book for all candidates approaching the new RCR anatomy exam.' - from the Foreword by Niall Power

**Get Through First FRCR: Questions for the Anatomy Module** Cambridge University Press

The Fellowship of the Royal College of Radiologists' Part 2A Examination has undergone significant changes and a new format was initiated in Spring 2004. The multiple choice question examination has now been divided into six system modules and contains questions on anatomy, physics and techniques. The exam format underwent further revision in Winter 2005, implementing an increased emphasis on the cardiothoracic & vascular and paediatrics modules. This MCQ book was written to address all these changes. This book contains 500 multiple choice questions with short answers; all answers are fully referenced allowing for additional reading. Questions are drawn from the most commonly used textbooks, specialty textbooks and current radiology journals, reflecting the current 'hot topics' in radiology. Six mock papers are included which mirror the new and revised exam format. "Radiology MCQs for the new FRCR Part 2A" is the ideal revision tool for radiology registrars preparing for the newly revised exam.
