Birds  
pervaded the  
ancient world,  
impressing  
their physical  
presence on  
the daily  
experience  
and  
imaginations  
of ordinary  
people and  
figuring  
prominently in  
literature and  
art. They  
provided a  
fertile source  
of symbols  
and stories in  
myths and  
folklore and  
were central  
to the ancient  
rituals of

augury and divination. Jeremy Mynott's *Birds in the Ancient World* illustrates the many different roles birds played in culture: as indicators of time, weather and the seasons; as a resource for hunting, eating, medicine and farming; as domestic pets and entertainment; and as omens and intermediaries between the gods and humankind. We learn how birds were perceived -

through quotations from well over a hundred classical Greek and Roman authors, all of them translated freshly into English, through nearly 100 illustrations from ancient wall-paintings, pottery and mosaics, and through selections from early scientific writings, and many anecdotes and descriptions from works of history, geography and travel. Jeremy Mynott

acts as a stimulating guide to this rich and fascinating material, using birds as a prism through which to explore both the similarities and the often surprising differences between ancient conceptions of the natural world and our own. His book is an original contribution to the flourishing interest in the cultural history of birds and to our understanding of the ancient cultures in

which birds played such a prominent part. *Exposing the Fake History That Turned a Generation against America* Race Point Publishing Newly appointed police inspector Domenic Jejeune doesn't mind ruffling a few feathers to flush out suspects in the brutal murder of a renowned ecological activist. 2015 Arthur Ellis Award — Winner, Best First Novel •

Globe and Mail 100: Best Books of 2014 • 2015 Kobo Emerging Writer Prize — Shortlisted, Best Mystery Inspector Domenic Jejeune's success has made him a poster boy for the U.K. police service. The problem is Jejeune doesn't really want to be a detective at all; he much prefers watching birds. Recently reassigned to the small Norfolk town of Saltmarsh, located in the heart of

Britain's premier birding country, Jejeune's two worlds collide when he investigates the grisly murder of a prominent ecological activist. His ambitious police superintendent foresees a blaze of welcome publicity, but she begins to have her doubts when Jejeune's most promising theory involves a feud over birdwatching lists. A second murder only complicates

matters. To unravel this mystery, Jejeune must deal with unwelcome public acclaim, the mistrust of colleagues, and his own insecurities. In the case of the Saltmarsh birder murders, the victims may not be the only casualties. Ten Thousand  
Birds provides  
a thoroughly

engaging and  
authoritative  
history of  
modern  
ornithology,  
tracing how  
the study of  
birds has been  
shaped by a  
succession of  
visionary and  
often-  
controversial  
personalities,  
and by the  
unique social  
and scientific  
contexts in  
which these  
extraordinary  
individuals  
worked. This  
beautifully  
illustrated  
book opens in  
the middle of  
the nineteenth  
century when  
ornithology  
was a  
museum-  
based

discipline  
focused  
almost  
exclusively on  
the anatomy,  
taxonomy,  
and  
classification  
of dead birds.  
It describes  
how in the  
early 1900s  
pioneering  
individuals  
such as Erwin  
Stresemann,  
Ernst Mayr,  
and Julian  
Huxley  
recognized  
the  
importance of  
studying live  
birds in the  
field, and how  
this shift  
thrust  
ornithology  
into the  
mainstream of  
the biological  
sciences. The

book tells the stories of eccentrics like Colonel Richard Meinertzhagen, a pathological liar who stole specimens from museums and quite likely murdered his wife, and describes the breathtaking insights and discoveries of ambitious and influential figures such as David Lack, Niko Tinbergen, Robert MacArthur, and others who through their studies of birds transformed

entire fields of biology. Ten Thousand Birds brings this history vividly to life through the work and achievements of those who advanced the field. Drawing on a wealth of archival material and in-depth interviews, this fascinating book reveals how research on birds has contributed more to our understanding of animal biology than the study of just about any other group of organisms. The parks, reservoirs, rooftops and gardens of London ? here defined as the area within 20 miles of St Paul's Cathedral ? have a surprisingly rich avifauna, including a healthy population of one of Britain's rarest breeders, the Black Redstart. The region also has a remarkable list of rarities ? in recent years Canary Wharf has proven to be a

magnet for vagrants, while one of the very few British records of Tengmalm's Owl hails from Plaistow ? an unfortunate bird stoned to death by local urchins in 1877. Some species, like the Peregrine Falcon, Black-headed Gull and Ring-necked Parakeet, have seen their fortunes soar over recent decades; others, such as House Sparrow, have suffered a population collapse. While as

recently as a century ago, the London area had breeding populations of birds such as Wryneck and Red-backed Shrike, which are now nationally extinct. The status, distribution and history of every species on the regional list is discussed in rich detail in this ebook, the first comprehensive avifauna for the London area ever published. The County Avifauna series provides

detailed information on the range and status of bird species at county level.

As a transnational history of science, Japan's Empire of Birds: Aristocrats, Anglo-Americans, and Transwar Ornithology focuses on the political aspects of highly mobile Japanese explorer-scientists, or cosmopolitan

gentlemen of science, circulating between Japanese and British/American spaces in the transwar period from the 1920s to 1950s. Annika A. Culver examines a network of zoologists united by their practice of ornithology and aristocratic status. She goes on to explore issues of masculinity and race related to this amidst the backdrop of imperial Japan's interwar period of

peaceful internationalism, the rise of fascism, the Japanese takeover of Manchuria, and war in China and the Pacific. Culver concludes by investigating how these scientists repurposed their aims during Japan's Allied Occupation and the Cold War. Inspired by geographer Doreen Massey, themes covered in the volume include social space and place in these specific locations and

how identities transform to garner social capital and scientific credibility in transnational associations and travel for non-white scientists.

All too often, when we find ourselves at a crossroads, the conventional ways of understanding

where we are can fall short of the mark. Intuitively, we know we need something more. Sacred astrology teaches that there are several distinct rites of passage that can show up as a psychospiritual crisis characterized by intense challenge and confusion. We are betwixt and between—no longer who we used to be, but not yet who we are becoming. However, these powerful

thresholds are where the real magic of our lives happens. They usually coincide with significant turning points that lead us toward our life's unique purpose. Learn how myth, folklore and story can be a source of guidance in difficult times. Illuminate the archetypal dimensions of your own story and re-enchant your life. Learn when to expect the crossroad times throughout your life so you can make

peace with the past, navigate the present, and create a more purposeful future. Discover the keys to self realization and step into alignment with who you're becoming. Create a self-care tool kit for the distinct issues that arise with each crossroads, and get clear about what you're calling in. Unlock new levels of self awareness through ritual, guided meditation, and journal

specifically for  
each

**Books ...** John Wiley & Sons Greenwich has been a centre for scientific computing since the foundation of the Royal Observatory in 1675. Early Astronomers Royal gathered astronomical data with the purpose of enabling navigators to compute their longitude at sea. Nevil Maskelyne in the 18th century organised the work of computing tables for the Nautical Almanac, anticipating

later methods used in safety-critical computing systems. The 19th century saw influential critiques of Charles Babbage's mechanical calculating engines, and in the 20th century Leslie Comrie and others pioneered the automation of computation. The arrival of the Royal Naval College in 1873 and the University

of Greenwich in 1999 has brought more mathematicians and different kinds of mathematics to Greenwich. In the 21st century computational mathematics has found many new applications. This book presents an account of the mathematicians who worked at Greenwich and their

achievements. Features A scholarly but accessible history of mathematics at Greenwich, from the seventeenth century to the present day, with each chapter written by an expert in the field. The book will appeal to astronomical and naval historians as well as historians of mathematics and scientific computing.
