Welcome to PNR series practical workbook of Human Anatomy and Physiology. We created this practical workbook with several oals in mind: accessibility, customization, and student engagement - helping students reach high levels of practical aspects in a simplest way. We

observed that students of pharmacy had a difficult time to write the experimental part. They require a workbook that would be simple and easy to follow. It's encouraging us for writing this practical workbook for pharmacy students focusing on 1st year Pharm. D (Human Anatomy and Physiology) as per new PCI syllabus.

Pharmacological knowledge among medical students can have a very short 'half life': students often fail not because they have failed to study, but because they have been unable to retain key knowledge and reproduce it in an exam setting. This book takes an alternative route to the conventional approach of comprehensively exploring each individual drug and its features: not only can such an approach overwhelm and make knowledge retention difficult, but the current exam format makes questions structured in this way unlikely anyway. Instead of aiming to be completely comprehensive, it examines drugs systematically by classifications, mechanisms of action, therapeutic uses and side effects, enabling students to gain the distilled, functional grasp of pharmacology that their exams actually demand quickly and clearly.

The present book is compilation of my lecture notes on Human Physiology. This book is an outcome of an idea I got from my students, when I saw them taking print out of my lecture presentations and get them spirally bounded as book to study during whole semesters, especially examination days. The present compilation of important facts & concepts of human physiological system well supported with self-drawn suitable figures are very helpful in revising entire syllabus particularly during examination days when students are running short of time and plenty is there to study. The present book covers almost all human physiological systems starting from Body Fluids to Muscle Physiology, Cardiovascular System, Endocrine System, Nervous System, Respiratory System, Excretory System, Digestive System and Reproductive System. Every chapter is very well supported with proper illustrations, tables and ray diagrams. Altogether about 50 illustrations are included in the book to make the mechanisms/concept easiest to understand by the students. This book shall be helpful to the students of Medical (MBBS/MD/MS), Paramedical, Basic Sciences viz. Zoology & Applied Sciences viz. Biomedical Sciences, Biotechnology, Biochemistry, Microbiology, Human Physiology, Life Sciences, Biosciences, Endocrinology, Pharmacy, Home Science, etc. I thank to readers in advance for their all love given to the book. I wish you all success in future endeavors!
