The aging of the population and the increasing number of older adults pursuing foreign language courses call for a greater understanding of the ways in which these individuals learn foreign languages. This book offers a pioneering contribution to the literature on foreign language education for older adults (aged 60 and over), termed foreign language geragogy. It details an empirical, multidisciplinary study on Japanese older learners of Spanish and focuses on the influence of learning experiences on vocabulary learning strategy use. It discusses the constraints that preconceptions impose on learners, researchers, instructors and administrators, and it offers a set of practical recommendations for foreign language activities for elderly individuals. It also introduces the notion of 'learner re-training', an instructional mechanism that contributes to older learners' self-acknowledgment

and autonomy development in foreign language learning. The book is directed at teachers and trainee teachers of foreign languages to older adults, and also at education professionals and researchers in the field of foreign language learning in general.

What's the point of creating a great Web site if no one goes there-or worse, if people come but never return? How do some sites, such as America Online, eBay, and GeoCities, develop into Internet communities with loyal followings and regular repeat traffic? How can Web page designers and developers create sites that are vibrant and rewarding? Amy Jo Kim, author of *Community Building on the Web* and consultant to some of the most successful Internet communities, is an expert at teaching how to design sites that succeed by making new visitors feel welcome, rewarding member participation, and building a sense of their own history. She discusses important design strategies, interviews influential Web community-builders, and provides the reader with templates and questionnaires to use in building their own communities.

Kristianna discovers the magic of Scotland when she comes face to face with the man of her dreams - four hundred years in the past... Art-history major Kristianna Campbell gets more education than she bargains for when she visits Scotland with her college class. On a shopping excursion she picks up an unusual souvenir-an antique pocket watch once owned by Iain MacGregor. The enchanted watch pulls her back through time where she lands smack in the middle of Iain MacGregor's territory-in the year 1603, during the proscription against the MacGregors. Unsure of where she is or how she got there, Kris is stunned when she sees Iain and realizes he's not exactly a stranger to her. She's dreamed of him for weeks. And her attraction to him is stronger in the flesh than in her dreams. Realizing the danger in revealing her real surname of Campbell, Kristianna tells him her last name is Armstrong. The situation is tense as Iain battles enemies on all sides, thanks to King James VI and the decree that the name of MacGregor be outlawed, and the Earl of Argyll, Archibald Campbell's desire to see the MacGregors decimated. Iain has neither the time nor the inclination to deal with the strange lass who mysteriously landed in his territory. But Kristianna affects him in ways no other woman has. To desire her is acceptable, but when she begins to reach the heart he thought long dead, he knows he will never be the same.

This book pioneered the concept of townscape. 'Townscape' is the art of giving visual coherence and organization to the jumble of buildings, streets and space that make up the urban environment. It has been a major influence on architects, planners and others concerned with what cities should look like.

The global population is expected to rise to 9.8 billion by the year 2050 - with everyone ultimately striving for prosperity. New methods must therefore be found to achieve more efficient production. Research to date shows that the biological inventory that has evolved: its products, processes, principles and tools, can spur modern technology. The development of technological innovations based on biological concepts, with the goal of particularly innovative and sustainable value creation, today is collectively known as "biological transformation". It results in highly functional products with striking properties that can be both manufactured and utilized in a resource-saving way. In terms of taking responsibility of the good of all people, biological transformation is therefore a path that applied research will have to take. The Fraunhofer-Gesellschaft has recognized the developmental technology potential of biological transformation and sees it as its task not only to drive the relevant research forward, but also to promote public awareness of the topic.

First published in 2004.Athanasius Kircher (1602-1680) -- German Jesuit, occultist, polymath - was one of most curious figures in the history of science. He dabbled in all the mysteries of his time: the heavenly bodies, sound amplification, museology, botany, Asian languages, the pyramids of Egypt -- almost anything incompletely understood. Kircher coined the term electromagnetism, printed Sanskrit for the first time in a Western book, and built a famous museum collection. His wild, beautifully illustrated books are sometimes visionary, frequently wrong, and yet compelling documents in the history of ideas. They are being rediscovered in our own time. This volume contains new essays on Kircher and his world by leading historians and historians of science, including Stephen Jay Gould, Ingrid Rowland, Anthony Grafton, Daniel Stoltzenberg, Paula Findlen, and Barbara Stafford.-

*The View from the Road* Scholar Select

"[B]ecause of the thoroughness of the literature reviews and the comprehensive coverage of the chapter topics, [this book] should be required reading for any scholar working in related areas of personality or intelligence."--PsycCRITIQUES iThis book is a masterly attempt to bring order and cohesion to a field that for many years has been riven with claims and counterclaims. The editors and authors are to be congratulated for addressing a very complex task so helpfully.î John Biggs, PhD Honorary Professor of Psychology University of Hong Kong îIf you are interested in intellectual

stylesópeopleís preferred ways of processing informationóthen this book belongs on your bookshelf.î Richard E. Mayer, PhD Professor of Psychology University of California, Santa Barbara iFor more than half a century, the construct of styleówhether designated as cognitive, thinking or learningóhas been in or out of fashion in the history of psychology and education. The editors of the present Handbook have invigorated the style construct in the form of intellectual styles, and have brought together a distinguished international panel of chapter authors who offer up-to-date surveys of the assessment, development, correlates, and educational and organizational applications of intellectual styles. For those seeking to familiarize themselves with current theory and research in an intellectually exciting field, the present Handbook is essential.î Nathan Kogan, PhD Professor Emeritus, Department of Psychology New School for Social Research, New York, NY The concept of intellectual styles has had a controversial history based on diverse philosophical and theoretical foundations. Most recently, the idea of intellectual stylesóan umbrella term that covers such closely related constructs as icognitive styles,î ilearning styles,î iteaching styles,î and ithinking stylesíóhas gained momentum as an explanation for why different people succeed in different professional and organizational settings. Previously, it was thought that high-achievers simply had more innate abilities than their less successful peers, but research has shown that individuals have different intellectual styles that are better suited for varying types of contexts and problems. Based on the most current and expansive research, this handbook is the first to provide a comprehensive review of research on the construct of intellectual style, from its foundations and development, to its relations to allied constructs, its roles in school and job performance, its applications in various populations, and its future.. This understanding of intellectual styles as a valid concept for both individuals and groups has far-reaching implications for researchers in cross-cultural psychology, multicultural education, organizational behavior and work performance, and many other academic disciplines, as well as practitioners in education and beyond. Key Features: Provides a comprehensive review of intellectual styles from multiple perspectives Written for students and scholars in diverse academic arenas, as well as practitioners in education and other fields Includes contributions from researchers from diverse disciplines, such as psychology, business, education, and health sciences *Handbook of Intellectual Styles* Schäffer-Poeschel

What has blank pages but is very useful? An unruled composition book! It is simple, durable, versatile and free of lines. Whether you need a composition book for journaling or drawing, this is the perfect tool for you to express yourself without the limitations and boundaries of lines. It offers a good opportunity for children to write without relying on the lines. It teaches them to become more conscious of placing the print on the page rather than just filling up the lines. It is also ideal for sketching, note taking, drawing, doodling, brainstorming, outlining, doing math and many more.

Anthropologists have written a great deal about the coastal adaptations and seafaring traditions of Pacific Islanders, but have had much less to say about the significance of rivers for Pacific island culture, livelihood and identity. The authors of this collection seek to fill that gap in the ethnographic record by drawing attention to the deep historical attachments of island communities to rivers, and the ways in which those attachments are changing in response to various forms of economic development and social change. In addition to making a unique contribution to Pacific island ethnography, the authors of this volume speak to a global set of issues of immense importance to a world in which water scarcity, conflict, pollution and the degradation of riparian environments afflict growing numbers of people. Several authors take a political ecology approach to their topic, but the emphasis here is less on hydro-politics than on the cultural meaning of rivers to the communities we describe. How has the cultural significance of rivers shifted as a result of colonisation, development and nation-building? How do people whose identities are fundamentally rooted in their relationship to a particular river renegotiate that relationship when the river is dammed to generate hydro-power or polluted by mining activities? How do blockages in the flow of rivers and underground springs interrupt the intergenerational transmission of local ecological knowledge and hence the ability of local communities to construct collective identities rooted in a sense of place?

This volume presents the results of part of the ESF project 'Second language acquisition by adult immigrants'. The present study deals specifically with structure of utterances in learner varieties. The authors have attempted to find general principles which determine the form of utterances from the very beginning to relatively advanced stages. Chapter 1 and 2 provide the framework for the study and here the guiding hypotheses are sketched

on the basis of a pilot analysis. The empirical part of the study is contained in Chapters 3-6, in which data are given for the acquisition of, respectively, English (by Punjabi and Italian learners), German (Italian and Turkish learners), Dutch (Turkish and Moroccan learners) and French (Moroccan and Spanish learners), thus allowing for crosslinguistic comparisons in various ways. For each data-set the learner's linguistic repertoire is established, and then the utterance patterns recurrent in his/her production and the constraints these patterns are subject to. In Chapter 7 the general and theoretical implications are discussed.
