"Fruits and Nuts" form the largest group among crop plants.
Several constraints such as long life cycle have caused
comparatively slow research progress in the past. The chapters

on 20 fruit and nut crops authored by 56 renowned scientists
from 12 countries include for the first time comprehensive
reviews on a variety of fruits and nuts. The huge amount of
information hitherto dispersed in journals is now available in a
clearly structured reference work.

Motivated by a plethora of phenomena from nature, this textbook
introduces into the physics of wetting of surfaces. After a brief
discussion of the foundations of surface tension, its
implementation for floating objects, capillary waves, bouncing
droplets, walking of water striders, etc. is discussed. Furthermore,

Marangoni flows, surface tension inspired instabilities, condensation and evaporation of droplets, liquid marbles, superhydrophobicity and superoleophobicity (lotus effect) are introduced. All relevant concepts are illustrated by the numerous qualitative and quantitative exercises. Contents What is surface tension? Wetting of surfaces: the contact angle Surface tension-assisted floating of heavy and light objects and walking of water striders Capillary interactions between particles. Particles placed on liquid surfaces. Elasticity of liquid surfaces, covered by colloidal particles Capillary waves Oscillation of droplets Marangoni flow and surface instabilities Evaporation of droplets. The Kelvin and the coffee-stain effects Condensation, growth and coalescence of droplets and the breath-figure self-assembly Dynamics of wetting: bouncing, spreading and rolling of droplets (water hammer effect - water entry and drag-out problems) Superhydrophobicity and superoleophobicity: the Wenzel and Cassie wetting regimes The Leidenfrost effect. Liquid marbles: self-propulsion Physics, geometry, life and death of soap films and bubbles

Forest trees cover one third of the global land surface, constitute many ecosystems, and play a pivotal role in the world economy.

This volume details Populus trees, pines, Fagaceae trees, eucalypts, spruces, Douglas fir and black walnut, and offers a

first-ever detailed review of *Cryptomeria japonica*. It thoroughly discusses innovative strategies to address the inherent problems of genome analysis of tree species.

Part of the seven-volume series *Genome Mapping and Molecular Breeding in Plants*, this book covers Cereals and Millets, which provide staple food for most of the earth's population. This book includes chapters on rice, wheat, maize, barley, oats, rye, sorghum, pearl millet, foxtail millet and finger millet. The emphasis is on advanced research on the major crops, including the model plants maize and rice, as well as on future road maps of genomic research for the less-often considered but equally deserving cereals and millets.

Effectiveness. Efficiency. Excellence. These words and concepts permeate current literature, courses, and discussions. They are defined in nearly as many different ways as the number of people who write and talk about them. For practical purposes, the definitions seem to boil down to these:- Effectiveness - doing the right things.- Efficiency - doing things right.- Excellence - efficiently meeting effective goals, both short term and long range. We believe that this book can help you improve the effectiveness, efficiency and excellence of your system for managing loss control ... and for quality, production and cost control. In essence, it can help improve your management system. Improved quality, production and cost control go hand-in-hand with improved loss control, and they all depend on how the

system is managed. The idea that excellence in safety and production go hand in hand is not new. As early as 1928 the American Engineering Council, based on an engineering and statistical study, demonstrated that an organization with decreasing injury rates is eleven times more likely to show increased production than an "unsafe" one. We believe that the book's concepts, practices, techniques and tools reflect what leading organizations around the free world have done, and are doing, to get their results. Spanning more than three decades, we have had the good fortune to work with tens of thousands of leaders in hundreds of organizations to distill the contents of this book. The ideas and applications are tried, tested, and proven. Put them to work and they will work for you.

Pulses, Sugar and Tuber Crops comprises reviews contributed by 47 eminent scientists from 10 countries. The chapters on common bean, pea, cowpea, sugarcane and potato include comprehensive reviews of voluminous research findings. Fundamental aspects and molecular results are also presented for eight 'orphan crops' of high agro-economic importance including mungbean, lentil, chickpea, lathyrus, pigeonpea, sweet potato, cassava and yam. Works on quinoa and Bambara groundnut are reviewed for the first time.

Breeding in Plants, the volume Oilseeds is devoted to oil-producing field crops such as soybeans, oilseed rape, peanuts, sunflowers, Indian mustard, Brassica rapa, black mustard and flax. While the grouping of economic plants is conventionally based on their agricultural purposes, several crops covered in this volume have other uses besides yielding oils. Brassica rapa is also used as a vegetable, the sunflower as an ornamental, and flax as a fibre crop. Black mustard, which is used as a condiment but is genetically close to other Brassica species, is also included here.

The Person in the Parasha, Rabbi Tzvi Hersh Weinreb's

compilation of essays based on his highly popular column of the same name, offers the unique point of view of a world-renowned Torah scholar, community rabbi, and clinical psychotherapist.

Each essay begins with an interesting anecdote which the author then connects to a central theme in the parasha, and wraps up with a profound message of inspiration and wisdom for life and spiritual growth. The Person in the Parasha offers a creative and original look at each of the weekly Torah readings, addressing a wide spectrum of human emotions and topics - optimism, grief, integrity, bullying, conformity, envy, aging, parenting, and much more. In this work, Rabbi Weinreb brings the biblical personalities

to life, focusing on what motivates them and how we can best emulate their positive traits in our own lives. Rabbi Weinreb offers guidance for daily life its challenges, struggles, and joys alike.

The history of "language teaching" is shot through with methods and approaches to language learning - most recently with "communicative language teaching" - but this book demonstrates that a more differentiated and richer understanding of learning a foreign language is both necessary and desirable. Languages and cultures are interlinked and interdependent and their teaching and learning should be too. Learning another language is part of a complex process of learning and understanding other people's ways of life, ways of thinking and socio-economic experience

Technical Crops includes plants of great agricultural importance. One chapter is devoted to cotton, the most important fiber crop on which significant progress in molecular genetic research has been made. Reviews on oil palm, coffee, tea, cocoa and rubber describe traditional breeding and preliminary molecular results. Chapters on forage crops, ornamentals, and medicinal and aromatic plants may serve as road maps for further molecular research.

Political conflict in our society is inevitable, and its results are

often far from negative. How then should we deal with the intractable differences arising from complex modern culture? Developing her groundbreaking political philosophy of agonistics – the search for a radical and plural democracy – Chantal Mouffe examines international relations, strategies for radical politics, the future of Europe and the politics of artistic practices. She shows that in many circumstances where no alternatives seem possible, agonistics offers a new road map for change. Engaging with cosmopolitanism, post-operatism, and theories of multiple modernities she argues in favour of a multipolar world with real cultural and political pluralism.

Environmental stress is one of the most significant factors affecting livestock performance and health, and it is only expected to increase with effects of global warming.

Environmental Physiology of Livestock brings together the latest research on environmental physiology, summarizing progress in the field and providing directions for future research. Recent developments in estimating heat stress loads are discussed, as well as key studies in metabolism, reproduction, and genetic expressions. Environmental Physiology of Livestock begins with a survey of current heat indexing tools, highlighting recent

discoveries in animal physiology, changes in productivity levels, and new technologies available to better estimate stress response. Using this synopsis as a point of orientation, later chapters hone in on major effects of heat stress, including changing metabolic pathways and nutrient requirements, endocrine regulation of acclimation to environmental stress, and reduced reproductive performance. The text concludes with a thorough discussion of environmental effects on gene expressions, providing important insight for future breeding practices. Environmental Physiology of Livestock is a globally contributed volume and a key resource for animal science researchers, geneticists, and breeders.

Pulses, Sugar and Tuber Crops Verso Books

Introducing the 10th Edition of this standard text covering all aspects of meat hygiene, from the production of clean and healthy animals, to the hygienic processing of meat and meat products, and the avoidance of food-borne hazards. This edition has been fully updated and revised to reflect a more integrated "farm to table" approach, and a more international perspective. Includes new material on BSE, a new section on operational hygiene, and more complete treatment of husbandry and ante-mortem issues.
