Practical Guide for the Construction Professional John Wiley & Sons

A Practical Guide for the Construction Professional Springer Science & Business Media

In September 1999, FIDIC introduced its new Suite of Contracts, which included a "new" Red, Yellow, Silver and Green forms of contract. The "new" Red Book was intended to replace the 1992 fourth edition of the Red Book, with the ambition that its use would cease with time. This ambition has not materialised and is unlikely to do so in the future. Despite the importance of the 1999 Forms, there has been very little published on the new concepts adopted in them and how they interact with the previous forms. This important work considers these aspects together with the many developments affecting the fourth edition of the Red Book that have taken place since 1997, when the second edition of this book was published, and relates them to key contracting issues. It is written by a chartered engineer, conciliator and international arbitrator

with wide experience in the use of the FIDIC Forms and in the various dispute resolution mechanisms specified in them. Important features of this book include:

- background and concepts of the various forms of contract;
- a detailed comparison of the wording of the 1999 three main forms, which although similar in nature; it nevertheless significantly differs in certain areas where the three forms diverge due to their intended purpose;
- analysis of the rights and obligations of the parties involved in the contract and the allocation of risks concerned;
- a range of 'decision tree' charts, analysing the main features of the 1992 Red Book, including risks, indemnities and insurances, claims and counterclaims, variations, procedure for claims, programme and delay, suspension, payments and certificates, dispute resolution mechanisms, and dispute boards;
- a much enlarged discussion of the meaning of "claim" and "dispute" and the types of claim with a discussion of the Notice provision in the 1999 forms of contract

for the submittal of claims by a contractor and by an employer;

- the FIDIC scheme of indemnities and insurance requirements; and the methods of dispute resolution provided by the various forms of contract; and
- five new chapters in this third edition, the first four chapters deal with each of the 1999 forms and the fifth chapter is confined to the topic of Dispute Boards.

It will also greatly benefit students in construction management, civil engineering, and architecture. Fidelity & Surety News John Wiley & Sons Thirty years after its publication, *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of

all a work of literature; the descriptions of street life as a kind of ballet and the bitingly satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition. Smith, Currie & Hancock's Common Sense Construction Law John Wiley & Sons Provides a wide insight into the construction business, showing the reader how a contractor organizes a construction company and controls his work. Offers a practical and direct approach and describes how a business starts up, how it's organized and how it's financed. Also covers estimating, cost keeping

systems, labor relations, equipment, safety, and insurance. Augmented with numerous case histories, forms and sample agreements to keep a job on schedule and within budget.

Construction Databook: Construction Materials and Equipment John Wiley & Sons

It is toward investigating, discussing and presenting the various issues involved in solid waste closure that this book is focused. It consists of invited papers presented at the 4th Annual Geosynthetic Research Institute Seminar. The closure [capping] of completed or abandoned solid waste facilities present particular challenges, for example: ★ there usually exists a very uncertain and random subsidence behaviour of the existing waste beneath the closure, ★ the friction behaviour of the various interfaces that are involved in solid waste

facilities is not established, ★ there are numerous long term geosynthetic stability and durability issues that must be addressed, and ★ there are an extremely large number of sites that require proper closure. These topics are addressed in the three sessions Geosynthetics in Landfill Closures, Interface Friction Considerations and Geocomposites Systems and New Materials. Current materials and basic techniques are reviewed and innovations discussed. Owners' perspectives and design considerations raised and specific problems such as liquid intrusion are addressed. The area of landfill closure simply begs innovation and the manufacturing sector is meeting the challenge. This gathering of expert opinions is an important document of the proper use of geosynthetics in landfill closure systems.
