This laboratory manual presents the structure of the human body by subdividing it into individual body systems, guiding students

through a series of dissection activities for use in the lab accompanied by full color photos and figures. The functional anatomy of each level of organization is studied from the microscopic level of organization to the gross (macroscopic) level. In addition, the embryological development of each body system and selected pathologies are examined. This manual studies anatomy of the human specimen in particular, but the cat and isolated animal organs are used in the dissection experiments.

Anatomy and Physiology McGraw-Hill Education

With the emergence of the new field of evolutionary developmental biology we are witnessing a renaissance of Darwin's insights 150 years after his *On the Origin of Species*. Thus far, the exciting findings from 'evo-devo' have only been trickling into college courses and into the domain of non-specialists. With its focus on the human organism, *Quirks of Human Anatomy* opens the floodgates by stating the arguments of evo-devo in plain English, and by offering a cornucopia of interesting case studies and examples. Its didactic value is enhanced by 24 schematic diagrams that integrate a host of disparate observations, by its Socratic question-and-answer format, and by its unprecedented compilation of the literature. By framing the 'hows' of development in terms of the 'whys' of evolution, it lets readers probe the deepest questions of biology. Readers will find the book educational and enjoyable, as it revels in the fun of scientific exploration.
