When it was first published in 1935, *On the Border with Mackenzie, or Winning West Texas from the Comanches* quickly became known as the most complete account of the Indian Wars on the Texas frontier during the 1870s, and remains one of the most exhaustive histories ever written by an actual participant in the Texas Indian Wars. The author, Capt. Robert G. Carter, a Union Army veteran and West Point graduate, was appointed in 1870 to serve as second lieutenant in the Fourth United States Cavalry stationed at Fort Concho, Texas. He was awarded the Medal of Honor in 1900 for his gallantry in action against the Indians occurring on October 10, 1871, during the battle of Blanco Canyon. Led by Col. Ranald Slidell Mackenzie, the Fourth Cavalry moved its headquarters to Fort Richardson, Texas, in 1871 where they soon became one of the most effective units on the western frontier. Among the battles and skirmishes they participated in were the Warren wagon train raid of 1871; the Kicking Bird pursuit of 1871; the Remolino fight of 1873; the Red River War of 1874-75; and the Black Hills War of 1876. "...a splendid contribution to the early frontier history of West Texas...a story filled with humor and pathos, tragedies and triumphs, hunger and thirst, war and adventure."—L. F. Sheffy "...[Carter] pulls no punches in this outspoken narrative, and the reader always knows where he stands."—John H. Jenkins, *Texas Basic Books* "...essential to any study of the Indian Wars of the Southern Plains."—Charles Robinson, Foreword

Progress in Astronautics and Aeronautics—Volume 15: Heterogeneous Combustion focuses on the processes, reactions, methodologies, and techniques involved in heterogeneous combustion. The selection first offers information on the techniques for the study of combustion of beryllium and aluminum particles, study of quenched aluminum particle combustion, and spectroscopic investigation of metal combustion. Discussions focus on the combustion of metal particles in a hot oxidizing atmosphere, experimental apparatus and procedure, selected examples of residue observations, ignition of beryllium, and photographic study of particle combustion. The text then takes a look at the analytical developments, experimental observations in oxygen atmospheres, and experimental observations in carbon dioxide atmospheres of vapor-phase diffusion flames in the combustion of magnesium and aluminum. The publication ponders on the combustion of elemental boron with fluorine, combustion of pyrolytic boron nitride, characteristics of diborane flames, oxidation of diethyldiborane, and reaction of pentaborane and hydrazine and structure of the adduct. The selection is a dependable reference for readers interested in heterogeneous combustion.

Progress in Astronautics and Rocketry, Volume 6: Detonation and Two-Phase Flow compiles technical papers presented at the ARS Propellants, Combustion, and Liquid Rockets Conference held in Palm Beach, Florida on April 26-28, 1961. This book provides an excellent illustration of research and development on a selected group of problems relating to detonations, two-phase nozzle flow, and combustion in liquid fuel rocket engines. This volume is divided into two parts. Part 1 covers the entire range of physical conditions under which detonation may be initiated or sustained, such as high explosives, solid propellants, liquid sprays, and gases. Experimental and theoretical studies are also discussed, including the significant progress of the basic phenomena involved in transition from deflagration to detonation, and nature of stable detonations in dilute sprays and other systems. The perennial problems associated with high frequency instabilities in liquid fuel rocket engines are considered in Part 2. This publication is valuable to students and investigators working in the field of propulsion research and development.

The appearance of three comets in the autumn of 1618 touched off a controversy of such proportions that its effects are still inextricably associated with some of the most dramatic events

marking the dawn of our modern era. This volume contains the principal works, in English translation, that were published during the extended controversy between Galileo and the Jesuits over the nature of comets, concluding with a commentary by Johann Kepler. The controversy of both scientific and philosophical significance because it was in this connection that Galileo disclosed his conception of scientific method, which has been vastly influential on the course of modern thought. The principal work, *Il Saggiatore* (The Assayer), is also of extraordinary literary merit; it is considered the greatest polemic ever written in the domain of physical science.

The Effective Board Karl W. Bergemann

When *So-Called Dollars* was published it was the first, and it is still the only book to deal comprehensively with its subject matter. The book begins with the legendary Erie Canal Completion issues of 1826 and proceeds to catalog 135 years of the Golden Age of American history, all the way up to 1961. Although there have been many propositions for reviving the book over the years, none were more than theoretical musings until two collectors, Tom Hoffman of Crystal Lake, IL and Jonathan Brecher of Cambridge, MA set the process in motion. They have been joined by two others, Dave Hayes and John Dean, to produce a remarkable new edition, of the sort that can only be the product of dedicated hobbyists who love their subject and see it as their obligation to share with others the knowledge gained from years of collecting. While the second edition holds true to the original in basic style and in substance, prices have skyrocketed and it offers much that is new. There are many more illustrations than in the first edition. In fact, virtually every type is now represented by a photograph. More historical information for the issues is presented in the text, which has been further expanded with additional listings of both previously unknown metal varieties and totally new items. The size of each item is now given in mm rather than in 16ths of an inch as in the 1963 edition. Each issue has been assigned a rarity rating of from R-1, indicating more than 5,000 known, to R-10, meaning unique. In addition, a loose-leaf price guide included in each book at no additional charge. The index has been expanded to include references to more subjects and places. Finally, there is a section of color plates. The Hibler & Kappen book remains the standard reference work on the subject with its HK numbers an instantly recognizable means of cataloging and identification.

Anthropologists have written a great deal about the coastal adaptations and seafaring traditions of Pacific Islanders, but have had much less to say about the significance of rivers for Pacific island culture, livelihood and identity. The authors of this collection seek to fill that gap in the ethnographic record by drawing attention to the deep historical attachments of island communities to rivers, and the ways in which those attachments are changing in response to various forms of economic development and social change. In addition to making a unique contribution to Pacific island ethnography, the authors of this volume speak to a global set of issues of immense importance to a

world in which water scarcity, conflict, pollution and the degradation of riparian environments afflict growing numbers of people. Several authors take a political ecology approach to their topic, but the emphasis here is less on hydro-politics than on the cultural meaning of rivers to the communities we describe. How has the cultural significance of rivers shifted as a result of colonisation, development and nation-building? How do people whose identities are fundamentally rooted in their relationship to a particular river renegotiate that relationship when the river is dammed to generate hydro-power or polluted by mining activities? How do blockages in the flow of rivers and underground springs interrupt the intergenerational transmission of local ecological knowledge and hence the ability of local communities to construct collective identities rooted in a sense of place?
