ANASTASIA BEST

First Language Attrition CRC Press

This book adopts an integrated approach to the study of contact literature through collaboration between theories of World Englishes and translation studies. The author proposes an interactive framework that integrates linguistic and cultural perspectives, through the analysis of selected Anglo-Arab and Arab-American contact literary texts: Samia Serageldine's *The Cairo House* (2000), Leila Ahmed's *A Border Passage* (1999), Leila Aboulela's *The Translator* (1999), Ahdaf Soueif's *The Map of Love* (2000), and Abdelkebir Khatibi's *Love in Two Languages* (1990). The author then discusses the pedagogical implications of bilingual creativity via a language in literature approach. This book will be of interest to students and scholars of translation studies, literature and cultural studies.

World Dredging & Marine Construction Springer

The intense language contact between Spanish and Catalan in Catalonia has led to cross-linguistic influence at all linguistic levels, but its effect on the prosody of these languages has received little attention to date. Based on semi-spontaneous and read speech data from 31 Catalan-Spanish bilinguals, this book provides a comprehensive analysis of the intonation of Spanish and Catalan as spoken in Girona, with a focus on the speakers' bilingualism. These contact varieties share numerous intonational properties, with differences mainly in the frequency of specific tones in certain contexts. However, they also exhibit significant variation, often linked to extralinguistic factors such as the bilinguals' language dominance. Overall, the intonation of these contact varieties results from substratum transfer and wholesale convergence between the prosodic systems of Spanish and Catalan. The book is particularly relevant to scholars researching prosody, language contact, variation, and multilingualism.

Contact de langues et changement linguistique en français acadien de la Nouvelle-Écosse Rodopi

This volume is intended to complete the Cell Chemistry and physiology module. It is about how the traditional boundaries of cell chemistry and physiology are being erased by molecular biology. We do not think it necessary to elaborate on this theme, particularly since the body of core knowledge found in this volume brings us a stage closer to answering the question, "what makes cell biology into a new discipline?" The first part of the volume deals with the chemistry of actin and myosin and is followed by chapters on cell motility, ATP synthesis in muscle, and contraction in smooth and skeletal muscle. Here the reader is immediately made aware of the contributions molecular biology is making to our understanding of the molecular mechanisms underlying muscle contraction. It is perhaps enough to point out that Huxley's concept of the cross-bridge cycle and generation of force can now be explained in molecular terms. Topics such as muscle fatigue and muscle disorders, as well as malignant hyperthermia are bound to arouse active learning in the student and set the stage for problem-based learning. Most medical students look askance at thermobiology. We think this is a mistake; hence, we have included a section dealing with this subject. This brings us to the chapter on the heat shock response, which at the very outset makes clear that many stressors besides heat are known to result in heat shock gene expression. Many of the heat shock proteins occur in unstressed cells and some of them behave as chaperones. These proteins also reach high levels in a wide range of diseases including neurodegenerative disorders. Whether certain diseases are the result of mutations in the heat shock genes is not yet known. As will be appreciated, much of the work done in this field involved the use of cultured cells. Animal cells in culture are the subject of the last chapter.

Marcel Proust Aujourd'hui 9 Elsevier

Since the inception of modern contact linguistics through the works of Weinreich (1953) and Haugen

(1953), numerous investigators have studied the manifestations of language contact across different disciplines, naturally adopting varied perspectives and approaches relevant to their particular field of inquiry. In spite of the many approaches and interests, quite simply, when speakers of different languages interact closely, it is typical for their languages to influence each other. The influence could be as common as the exchange of words or what is termed vocabulary borrowing in the literature. It can also go deeper, extending to the exchange of even basic characteristics of a language, such as morphology and grammar. In some cases, the result of the contact of two languages can be the replacement of one by the other. This is most common in asymmetric relationships between languages, and sometimes leads to language shift and death. The present volume is unique in that it brings together research by distinguished scholars and other highly talented investigators from across the world to offer a multidimensional exploration of the field. The individual chapters present contemporary discussions and analyses of the topics, grouped into three parts.

TID. John Benjamins Publishing

Vols. for 1963- include as pt. 2 of the Jan. issue: Medical subject headings.

Cell Chemistry and Physiology: Part IV Brady Publishing

This book deals with codeswitching, the use of two or more different languages in the same conversation. The author advances a theoretical argument which aims at a general explanation of the motivations underlying the phenomenon.

Resources in Education Oxford University Press

In this work, outstanding, recent developments in various disciplines, such as structural dynamics, multiphysics mechanics, computational mathematics, control theory, biomechanics, and computer science, are merged together in order to provide academicians and professionals with methods and tools for the virtual prototyping of complex mechanical systems. Each chapter of the work represents an important contribution to multibody dynamics, a discipline that plays a central role in the modelling, analysis, simulation and optimization of mechanical systems in a variety of fields and for a wide range of applications.

10 MWe Sodium Deuterium Reactor Design Report HarperChristian + ORM

Is this all you're living for? For years, pastor Paul Tripp understood we were "hardwired for forever." But he didn't understand that it was more than a valuable insight. It is a practical tool to help us face the disappointment of everyday life. Now he knows, and he can help you discover how to survive and thrive in the middle of your story, with the final chapter of heaven in view. Instead of embracing the world's motto--"you only live once"--follow Tripp as he unpacks the biblical truth of the world as a broken place, longing for a second chance. And come alive as you discover the meaning and redemption all this brokenness can bring to your life today. With practical insights on how eternity impacts your relationships, your job, your kids, and your deepest struggles, you'll be encouraged to relax into the eternal story God is writing for you. You really are hardwired for eternity, and this book reveals how you can begin to view all that happens in your life as preparation for Forever.

Cumulated Index Medicus Presses Université Laval

This important volume contains selected papers and extensive commentaries on laser trapping and manipulation of neutral particles using radiation pressure forces. Such techniques apply to a variety of small particles, such as atoms, molecules, macroscopic dielectric particles, living cells, and organelles within cells. These optical methods have had a revolutionary impact on the fields of atomic and molecular physics, biophysics, and many aspects of nanotechnology. In atomic physics, the trapping and cooling of atoms down to nanokelvins and even picokelvin temperatures are possible. These are the lowest temperatures in the universe. This made possible the first demonstration of Bose-Einstein condensation of atomic and molecular vapors. Some of the applications are high precision atomic clocks, gyroscopes, the measurement of gravity, cryptography,

atomic computers, cavity quantum electrodynamics and coherent atom lasers. A major application in biophysics is the study of the mechanical properties of the many types of motor molecules, mechanoenzymes, and other macromolecules responsible for the motion of organelles within cells and the locomotion of entire cells. Unique *in vitro* and *in vivo* assays study the driving forces, stepping motion, kinetics, and efficiency of these motors as they move along the cell's cytoskeleton. Positional and temporal resolutions have been achieved, making possible the study of RNA and DNA polymerases, as they undergo their various copying, backtracking, and error correcting functions on a single base pair basis. Many applications in nanotechnology involve particle and cell sorting, particle rotation, microfabrication of simple machines, microfluidics, and other micrometer devices. The number of applications continues to grow at a rapid rate. The author is the discoverer of optical trapping and optical tweezers. With his colleagues, he first demonstrated optical levitation, the trapping of atoms, and tweezer trapping and manipulation of living cells and biological particles. This is the only review volume covering the many fields of optical trapping and manipulation. The intention is to provide a selective guide to the literature and to teach how optical traps really work.

Intonation in Language Contact BRILL

A reference source to thousands of electronic forums, libraries, and databases worldwide that users can access inexpensively through online services. Features include: resources for 11 of the most popular online services; resource listings categorized by more than 60 discipline areas; appendices with guides to Internet library and Education Network; and more.

Pragmatics Cambridge Scholars Publishing

This book contains 17 studies by leading international scholars working on a wide range of topics in Arabic socio-linguistics, divided into four parts. The studies in Part 1 address questions of national language planning in a diglossic situation, with a particular focus on North Africa. Part 2 explores the relationship of identity and language choice in different Arabic-speaking communities living both within and outside the Arab World. Part 3 examines language choice in such diverse contexts as popular preaching, humour and Arab women's writing. Part 4 contains 5 papers in which variation, code-switching and generational language shift in the Arabic-language diaspora in Europe and the USA are the focus. The collection as a whole provides wide-ranging introduction to key areas of current research, which will be of interest to the general sociolinguist as well as the Arabic language specialist.

Telephone System Construction Contact (Labor and Materials) World Scientific

The Handbook of Language Contact offers systematic coverage of the major issues in this field - ranging from the value of contact explanations in linguistics, to the impact of immigration, to dialectology - combining new research from a team of globally renowned scholars, with case studies of numerous languages. An authoritative reference work exploring the major issues in the field of language contact: the study of how language changes when speakers of distinct speech varieties interact. Brings together 40 specially-commissioned essays by an international team of scholars. Examines language contact in societies which have significant immigration populations, and includes a fascinating cross-section of case studies drawing on languages across the world. Accessibly structured into sections exploring the place of contact studies within linguistics as a whole; the value of contact studies for research into language change; and language contact in the context of work on language and society. Explores a broad range of topics, making it an excellent resource for both faculty and students across a variety of fields within linguistics.

The Hereford Earthquake of December 17, 1896 Routledge

This volume provides a state-of-the-art treatment of research on language attrition, the non-pathological loss of a language through lack of exposure. It combines a review of past and present research with in-depth treatments of specific theoretical and methodological issues and reports on

individual studies. Special prominence is given to the identification of problematic areas in attrition research, with a view to pointing out possible solutions. The book specifically addresses itself to those who wish to acquaint themselves with the research area of language attrition, providing them with both a thorough overview of the field and a basis on which to build their own research. The combination of experience and an innovative outlook present in this collection, however, make it a valuable source for those familiar with attrition as well. Especially useful to both beginners and veterans is the extensive annotated bibliography.

Language Contact John Benjamins Publishing

Sans constituer une exception, le transfert des marqueurs discursifs participe d'un changement linguistique que sous-tend le phénomène de grammaticalisation sous sa triple dimension - reproduction d'un modèle, sédimentation structurale et émergence d'une grammaire bilingue, évolution vers le pôle grammatical. Le terrain acadien du sud-ouest de la Nouvelle-Écosse est interrogé dans la perspective de l'impact du contact de langues sur la classe des marqueurs discursifs. (CD-Rom inclus).

Bibliographie internationale sur le bilinguisme Springer

NATO's air operation against Yugoslavia, undertaken with a view to helping the Kosovo Albanians resist genocide and ethnic cleansing, confronted the international community with a bitter dilemma. In Europe, the choice either to tolerate massive violations of human rights or to infringe the principle of non-use of force, given the absence of explicit authorization by the Security Council, was a challenge never before encountered since the new world order was ushered in by the Charter of the United Nations. This book, a collection of legal essays which emerged from a meeting of members of the French, German, and Polish societies of international law, not only attempts to analyze the Kosovo war from the viewpoint of humanitarian intervention based on the failure of the Rambouillet conference, but also intends to provide an overall picture of the responsibilities incumbent on the international community. Starting with the lifting of Kosovo's autonomy by the Yugoslav federal authorities in 1989/90, it follows the tragic events step by step. Not only are the crimes committed by Yugoslav military units and police as well as by the Kosovo Liberation Army listed in specific detail, an inquiry is also made into NATO's compliance with the applicable standards of humanitarian law. The book concludes with an examination of the future of the province in light of Security Council resolution 1244 of 1999 and the Stability Pact adopted to ensure economic recovery of the entire region.

Studies in Intelligence Springer Nature

This volume of the treatise deals with structural aspects of the cytoskeleton: the characteristics of the filaments and their components; the organization of the genes; motor proteins; interactions with membranes.

Multibody Dynamics 2019 John Benjamins Publishing Company

This book collects a selection of fifteen papers presented at three meetings of the Society for Pidgin and Creole Linguistics in 1996 and 1997. The focus is on papers which approach issues in creole studies with novel perspectives, address understudied pidgin and creole varieties, or compellingly argue for controversial positions. The papers demonstrate how pidgins and creoles shed light on issues such as verb movement, contact-induced language change and its gradations, discourse management via tense-aspect particles, language genesis, substratal transfer, and Universal Grammar, and cover a wide range of contact languages, ranging from English- and French-based creoles through Portuguese creoles of Africa and Asia, Sango, Popular Brazilian Portuguese, West African Pidgin Englishes, and Hawaiian Creole English.

Structure and Assembly Editions L'Harmattan

This book provides the first comprehensive coverage of the quickly evolving research field of membrane contact sites (MCS). A total of 16 chapters explain their organization and role and unveil the significance of MCS for various diseases. MCS, the intracellular structures where organelle membranes come in close contact with one another, mediate the exchange of proteins, lipids, and ions. Via these functions, MCS are critical for the survival and the growth of the cell. Owing to that central role in the functioning of cells, MCS dysfunctions lead to important defects of human physiology, influence viral and bacterial infection, and cause disease such as inflammation, type II diabetes, neurodegenerative disorders, and cancer. To approach such a multifaceted topic, this volume assembles a series of chapters dealing with the full array of research about MCS and their respective roles for diseases. Most chapters also introduce the history and the state of the art of MCS research, which will initiate discussion points for the respective types of MCS for years to come. This work will appeal to all cell biologists as well as researchers on diseases that are impacted by MCS dysfunction. Additionally, it will stimulate graduate students and postdocs who will energize, drive, and develop the research field in the near future.
