The essays in this work offer a high-level examination of the most important issues facing financial services regulation, and the far-reaching effects of the Financial Services and Markets Act 2000 on the UK financial sector in the context of rapid global change. Taking an interdisciplinary approach the book includes contributions by many distinguished academic authorities on the law and economics of regulation, and also some of the most influential practitioners, regulators and policymakers. As such it provides an authoritative analysis of the underlying issues affecting the broad development of financial services regulation: the objectives of regulation, the responsibilities of the regulated community, the accountability of regulators, the regulation of electronic financial markets and the impact of stock market mergers, regional regulation within Europe, and the development of global financial regulation.

Improving Consumer Financial Literacy Under the New Regulatory System Walter de Gruyter GmbH & Co KG

The financial services industry is being transformed by heightened regulation, technological disruption, and changing demographics. These structural forces have lowered barriers to entry, increasing competition from within and outside the industry, in the form of entrepreneurial fintech start-ups to large, non-financial technology-based companies. The Technological Revolution in Financial Services is an invaluable resource for those eager to understand the evolving financial industry. This edited volume outlines the strategic implications for financial services firms in North America, Europe, and other advanced economies. The most successful banks, insurance companies, and asset managers will partner with financial technology companies to provide a better and more innovative experience services to retail customers and small businesses. Ultimately this technological revolution will benefit customers and lead to a more open and inclusive financial system.

Fintech has emerged as one of the fastest growing sectors in the financial services industry and has radically disrupted traditional banking. However, it has become clear that for both to thrive, the culture between fintech and incumbent firms must change from one of competition to collaboration. The Financial Services Guide to Fintech looks at this trend in detail, using case studies of successful partnerships to show how banks and fintech organizations can work together to innovate faster and increase profitability. Written by an experienced fintech advisor and influencer, this book explains the fundamental concepts of this exciting space and the key segments to have emerged, including regtech, robo-advisory, blockchain and personal finance management. It looks at the successes and failures of bank-fintech collaboration, focusing on technologies and start-ups that are highly relevant to banks' product and business areas such as cash management, compliance and tax. With international coverage of key markets, The Financial Services Guide to Fintech offers practical guidance, use cases and business models for banks and financial services firms to use when working with fintech companies.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

Interest in Financial Services Marketing has grown hugely over the last few decades, particularly since the financial crisis, which scarred the industry and its relationship with customers. It reflects the importance of the financial services industry to the economies of every nation and the realisation that the consumption and marketing of financial services differs from that of tangible goods and indeed many other intangible services. This book is therefore a timely and much needed comprehensive compendium that reflects the development and maturation of the research domain, and pulls together, in a single volume, the current state of thinking and debate. The events associated with the financial crisis have highlighted that there is a need for banks and other financial institutions to understand how to rebuild trust and confidence, improve relationships and derive value from the marketing process. Edited by an international team of experts, this book will provide the latest thinking on how to manage such challenges and will be vital reading for students and lecturers in financial services marketing, policy makers and practitioners.

Creating Value in Financial Services World Bank Publications

Creating Value in Financial Services is a compilation of state-of-the-art views of leading academics and practitioners on how financial service firms can succeed in today's competitive environment. The book is based on two conferences held at New York University: the first, 'Creating Value in Financial Services', held in March 1997, and the second, 'Operations and Productivity in Financial Services', in April 1998. The book is essentially designed to be a compendium of leading edge thinking and practice in the management of financial services firms. There is no book today that has this focus. It contains ideas that can apply to other service industries. Topics addressed are increasingly important worldwide as the financial services industries consolidate and search for innovative new directions and ways to create value in a fiercely competitive environment.

Financial Institutions Answer Book Wiley-Interscience

This book provides a practical analysis of the typical investments and funding sources of depository institutions. With a particular emphasis on mortgage-related investments (ARMs, CMOs, IOs, and POs), state-of-the-art valuation models are included that incorporate both call and default risk. Equity funding issues are also analyzed in detail. In addition, the author summarizes the history of the depository institution crisis, discusses the future outlook, and suggests a creative solution to the deposit insurance crisis that permits government deposit insurance without risk or cost to taxpayers. After proposing a system of private deposit insurance backed by minimal market-to-market collateral requirements, the author focuses on micro topics. In particular, the book includes a comprehensive evaluation of default risk data, precise equations for valuing complex mortgage securities, a theoretical model for making hedging and capital adequacy decisions (including an econometric model for estimating the return on the market portfolio and market risk premiums), and a practical discounted cash flow valuation model for analyzing depository institution stock (that incorporates financial statement items and footnotes as well as mortgage prepayments and the term structure of interest rates). The work represents an excellent handbook for financial institution executives, consultants, regulators, investors, and students.

Do you know how banking and money will look like in the new digital age? This book collects the voices of leading scholars, entrepreneurs, policy makers and consultants who, through their expertise and keen analytical skills, are best positioned to picture from various angles the ongoing technological revolution in banking and finance. You will learn how lending and borrowing can exist without banks; how new forms of money can compete to better serve different society needs; how new technologies are banking the unbanked communities in the poorest parts of the world, and how ideas and small projects can be financed by the crowds without the need to rely upon banks. You will learn how, in the new digital age, we will interact with new self-organised and autonomous companies that operate without any human involvement, based on a set of programmed and incorruptible rules. You will learn that new business models will emerge thanks to technology-enabled platforms, upon which one can build new forms of non-hierarchical cooperation between strangers. And you will also learn that new forms of risks and threats are emerging that will destabilise our systems and jeopardise the stability of our financial order.
