MILLER MATHEWS

Scottish Traction
Amberley Publishing
Limited
The four seasons pass
by like a gliding ship,
each signalled by a
transformation of

changing colors and
hues of light, thus
providing a form of
marker to these
passages of time.
Living in the temperate
zone we experience
four distinct seasons.
The railway scene
reflects such in its own
special character - cold
winter air enhances the
bountiful steam

escaping from the hissing steam locomotive impatiently awaiting its departure, while autumn enchants with trees that exude a variety of hues which embellish any image of even the most mundane suburban train. Springtime blossom and wild flowers bestow railway cuttings with a bounty of generous bright colors while coastal railways often look most inviting on warm sunny days as they pass alongside azure seas and golden beaches. The seasons each add their own dimension for the photographer to encapsulate, and railways passing through the ever-changing landscape provide their own tribute to this inspirational tapestry.

As readers travel through each season, so they are invited to share this awe and constant source of inspiration from nature's kaleidoscope of color. Photographs are provided with captions and reflective commentary to enlighten the knowledgeable rail enthusiast alongside those who equally enjoy such a portrait of landscape and scenery through the seasons. The range of photographs ranges from the mid -1980's to the present with the majority from the last two decades. [Book of the Deltics, British Rail Class 55's ...](#) The Crowood Press Colin Alexander takes the reader on a delightfully nostalgic cross-country trip by rail in the 1980s.

The Deltic Locomotives of British Rail Pen and Sword Transport
The first steam locomotives used on any British railway, worked in industry. The use of new and second hand former main line locomotives, was once a widespread aspect of the railways of Britain. This volume covers many of the once numerous manufacturers who constructed steam locomotives for industry and contractors from the 19th to the mid 20th centuries. David Mather has spent many years researching and collecting photographs across Britain, of most of the different locomotive types that once worked in industry. This book is designed to be both a record of these various

manufacturers and a useful guide to those researching and modelling industrial steam.

Railways of the Chilterns Ian Allan Pub

In this superb collection of colour photographs Martin Hart records the iconic 1960s diesels built by English Electric. This is the first volume in the Amberley Railway Archive series.

The A4 Pacifics After Gresley Amberley Publishing Limited
Colin Alexander looks at the output of the iconic, world-famous Vulcan Foundry.

The Deltics & Baby Deltics Pen and Sword Transport
In 2005, Ian Allan Publishing published *Diesel Pioneers*, which provided a complete overview of the

development of the early diesel classes inherited by BR and those that were developed as part of the Modernisation Plan of 1955. This lovely new book takes the subject forward and covers the standard diesel locomotive designs that were made during the early 1960s which include the Class 33s, the 37s, the 47s, the Hymeks, the Westerns and the Deltics as well as the less successful Claytons. A number of these early classes proved successful and were built in significant numbers between their introduction and the ceasing of production in the late 1960s. Many of the most productive classes were, in fact, not to arise from the Modernisation Plan but were developed from

the early 1960s onwards and this book covers these in detail. The book explores the background to the development of each class and provides an extended overview of diesel locomotive development of this period. Illustrated with unseen photographs, many with colour throughout, this book will appeal to the growing numbers of diesel modellers and enthusiasts.

High Speed Trains to the North of England
Fonthill Media

Explores the preserved diesel locomotives of the UK.

Diesels at Doncaster
Amberley Publishing Limited

Gives a pictorial account of Class 43 locomotives.

Amberley Publishing Limited
Andrew and John Walker look at diesels around the iconic Doncaster depot.

The Railway

Magazine Pen and Sword Transport Model Railways on a Budget details an eight-year journey into the fascinating world of railway modeling; from fumbling beginnings to a growing competence with layout design and construction.

The Metropolitan-Vickers Type 2 Co-Bo Diesel-Electric

Pen and Sword Transport
Colin J. Howat looks at traction around Scotland.

British Industrial Steam Locomotives

Oxford Publishing
For as long as we could remember steam traction had been king

on our railways. The resounding beat of exhaust from classic designs by Gresley, Stanier, Collett, Bulleid and many others had thrilled us all, while less prestigious 'work-horses' had kept commuters and freight moving throughout a vast network of major and minor routes.

Mighty diesels had replaced them, notably the iconic Class 55 'Deltics', setting new standards for speed and efficiency on the East Coast Main Line. Electrification became the 'buzz-word' as the need for speed increased and drove railway planning to a new level. The West Coast Main Line saw the wires go up by the mid-1970s and though other express routes would eventually follow the stage was set for

the development and introduction of an alternative mode of traction for main lines not yet electrified, based on the concept of a powerful diesel locomotive at each end of a rake of newly designed carriages. The High Speed Diesel Train was thus conceived. Sleek and elegant. A modern design for a new age of rail travel. Capable of running at speeds of up to 125mph (201km/h) it was an immediate success and is still giving stalwart service some forty years later. A testament to its resilience. This is the story of the archetypal express diesel train – the Inter City 125. [Preserved Diesels in the UK](#) Amberley Publishing Limited
A pocket guide to 60 of

the most iconic British locomotives of the last two centuries, which will have wide appeal as a handy yet detailed reference book on British locomotives. Since the 1800s locomotives have steamed, chugged and sparked their way into the nation's affections. These powerful engines were the drivers of the Industrial Revolution, and to the present day carry passengers and freight to every corner of Britain. But do you know your Locomotion from your Rocket, or your Gresley Class A4 from your Princess Coronation Class? How heavy is the Flying Scotsman? And who designed the Britannia Class? The Loco Spotter's Guide answers all of these questions, with first-

class illustrations portraying more than 60 of the most important steam, diesel and electric designs, including all-important specifications and technical details to aid any would-be loco spotter.

Loco Spotter's Guide

Pen and Sword

Transport

A thorough history of the Metropolitan-Vickers locomotive, also known as "Class 28," featuring 160 color and black & white photos. This book provides an in-depth history of the Metropolitan-Vickers diesel-electric Type 2 locomotives, more frequently known collectively as the "Co-Bo's" due to their unusual wheel arrangement. Twenty locomotives were

constructed during the late-1950s for use on the London Midland Region of British Railways. The fleet was fraught with difficulties from the start, most notably due to problems with their Crossley engines, this necessitating the need for extensive rehabilitation work during the early-1960s. Matters barely improved and the option to completely re-engine the locomotives with English Electric units was debated at length, but a downturn in traffic levels ultimately resulted in their demise by the end of 1968 prior to any further major rebuilding work being carried out. Significant quantities of new archive and personal sighting information,

supported by over 180 photographs and diagrams, have been brought together to allow dramatic new insights into this enigmatic class of locomotives, including the whole debate surrounding potential re-engining, their works histories, the extended periods in storage, together with in-depth reviews of the various detail differences and liveries.

Train Doctor Pen and Sword Transport
With a wealth of illustrations, a nostalgic look back at the BR Blue era of British Rail in northern England.

Model Railways on a Budget
Amberley Publishing Limited
The London and North Eastern Railway, or LNER as it was

familiarly known, was one of the Big Four companies that took control of Britain's railway network following the 'Grouping' in 1923. This network represented a challenging mixture of mainline and rural passenger routes, suburban services, and freight and industrial lines across the east coast of England and Scotland. Despite this challenge, the LNER became famous for its style, speed and efficiency, with record-breaking high-speed routes capturing the public's imagination, supported by iconic locomotives such as the Flying Scotsman and Mallard. Full of beautiful photographs, this is a perfect introduction to one of Britain's best-loved

railway operators during the Age of Steam.

Class 55 Deltics

Amberley Publishing Limited

A follow on to the author's previous book a 'Lifetime of Deltics,' This revised second edition keeps all of the best bits of the earlier book but also includes a considerable amount of new material and photographs which have only become available following the publication of a 'Lifetime of Deltics' in 2018. If Class 55 locomotives are your thing, then this book is a must with almost 400 pages of nostalgia, memories, performance logs, and previously unpublished photographs. The book contains the author's own story, that of a number of retired ex-

railway men, and details of possibly the greatest Deltic run of all-time.

Britain's Changing Train Liveries

Bloomsbury Publishing
Hugh Llewelyn takes a look at the wide variety of traction in and around London over several decades.

North East to South West by Rail in the 1980s Pen and Sword Transport

With a wealth of previously unpublished images, Adam Head captures the first major part of the famous East Coast Main Line.

Class 55 Deltics

Bloomsbury Publishing
Railway liveries play an important role in establishing much-valued recognition of the many operating companies through the variety of colors worn by their trains which

ply our British railways. These reinforce the pride that their “uniform” bestows. This is demonstrated by the immaculate designs which adorned the Pre-grouping steam locomotives through to the stamp of Network South East which certainly raised the profile of many ordinary commuter trains, at least around London and the Home Counties. Similarly, it is a quality which is especially evident in the ubiquitous all-pervading British Railways blue era, which now features as an essential ingredient in diesel preservation, as also in a multitude of colors and futuristic designs bestowed by the contemporary privatized passenger and freight companies.

Furthermore, consider the appeal of “retro” liveries which decorate some of the locomotives hauling charter trains, a trend which reinforces the popularity of liveries which were once merely part of the mundane everyday scene. Any glimpse through the news reviews and photographs published in monthly railway magazines will reveal such a kaleidoscope of colors adorning the locomotives and rolling stock which traverse the UK’s modern and preserved railways. This book endeavors to facilitate a brief overview of some of these liveries in the hope that it will whet the readers’ appetite to explore their own world of railway liveries.
