*The Economics of the
Motor Freight
Industries* McGraw-Hill
Professional Publishing
This text is a reference
on the treatment of

odours and odour
control technology. It
covers odours emitted
by a variety of
industrial sources,
including wastewater
treatment plants,
chemical process
plants and food
industry plants.
Calendar pads and

stands Wiley-Interscience

An authoritative 1300-page condensation of the Third Edition of the Kirk-Othmer Encyclopedia of Chemical Technology (25 volumes plus supplement volume). Approximately 1,100 articles were abridged and condensed from the original and reviewed by the author and other experts for accuracy. Cross references, index, extensive tables, charts, and general references.

Jet Cutting Technology

Springer Science & Business Media

These recommendations present general methods for the assessment of fatigue damage in welded components, which may affect the limit

states of a structure, such as ultimate limit state and serviceability limited state. Fatigue resistance data is given for welded components made of wrought or extruded products of ferritic/pearlitic or bainitic structural steels up to $f_y = 700$ Mpa and of aluminium alloys commonly used for welded structures.

Proceedings of the 10th American Waterjet Conference

Springer Science & Business Media

This volume contains papers presented at the 11th International Conference on Jet Cutting Technology, held at St. Andrews, Scotland, on 8-10 September 1992.

Jetting techniques have been successfully applied for many years in the field of cleaning

and descaling. Today, however, jet cutting is used in operations as diverse as removing cancerous growths from the human body, decommissioning sunsea installations and disabling explosive munitions. The diversity is reflected in the papers presented at the conference. The papers were divided into several main sections: jetting basics -- materials; jetting basics -- fluid mechanics; mining and quarrying; civil engineering; new developments; petrochem; cleaning and surface treatment; and manufacturing. The high quality of papers presented at the conference has further reinforced its position as the premier event in the field. The volume will be of

interest to researchers, developers and manufacturers of systems, equipment users and contractors.

Air Conditioning,
Heating and Ventilating

Woodhead Publishing

Abrasive water jet machining was introduced to manufacturing ten years ago and has been increasingly used for treating hard-to-machine and multi-layered materials and as an alternative tool for milling, turning, drilling and polishing. This is the first comprehensive review of the technique, dealing with a broad range of issues including mixing and acceleration processes, material removal mechanisms, process optimization and fluid mechanics.

Explanations are given

as the book follows the development of an abrasive water jet machining process, from tool generation through to machining results, supervision and control. This methodical journey through the field is marked by drawings, graphs and tables, many of which are being published here for the first time. Though the book is written at an academic level, it focuses very much on practical applications, which reflects the authors' extensive involvement with both laboratory research and industrial

practices.
