The OECD Public Integrity Handbook provides guidance to government, business and civil society on implementing the OECD Recommendation on Public Integrity. The Handbook clarifies what the Recommendation's thirteen principles mean in practice and identifies challenges

in implementing them.

### **Buying Green!** Routledge

The circular economy is a policy approach and business strategy that aims to improve resource productivity, promote sustainable consumption and production and reduce environmental impacts. This book examines the relevance of the circular economy in the context of developing countries, something which to date is little understood. This volume highlights examples of circular economy practices in developing country contexts in

relation to small and medium enterprises (SMEs), informal sector recycling and national policy approaches. It examines a broad range of case studies, including Argentina, Brazil, China, Colombia, India, Indonesia, Kenya, South Africa, and Thailand, and illustrates how the circular economy can be used as a new lens and possible solution to cross-cutting development issues of pollution and waste, employment, health, urbanisation and green industrialisation. In addition to more technical and policy oriented

contributions, the book also critically discusses existing narratives and pathways of the circular economy in the global North and South, and how these differ or possibly even conflict with each other. Finally, the book critically examines under what conditions the circular economy will be able to reduce global inequalities and promote human development in the context of the Sustainable Development Goals. Presenting a unique social sciences perspective on the circular economy discourse, this book is relevant to students and scholars studying sustainability in economics, business studies, environmental politics and development studies.

**Health and Social Services Review, 2008** OECD Publishing

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in

its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

UNESCO Science Report OECD Publishing Natural resources, and the materials derived from them, represent the physical basis for the economic system. Recent decades have witnessed an unprecedented growth in demand for

these resources, which has triggered interest from policy makers in transitioning to a more resource efficient and ...

*OECD Public Governance Reviews Skills for a High Performing Civil Service* OECD Publishing

One of the most urgent problems facing the world today is environmental sustainability. Current practices of pollution control, waste treatment, and environmental protection are not only hugely expensive and a burden on development but also unsustainable in the long run for their steady depletion of the world's natural resources. Any solutions must have proven economic benefits, be technologically viable, and meet prevailing environmental and social perspectives. The main objective of this new set of studies is to describe methods that help to protect the environment and conserve natural resources. This can be achieved by applying the 'cradle-to-cradle' concept, which aims to use materials in closed cyclic loops without generating any type of waste or pollution. The authors provide the reader with an introduction to basic concepts of sustainable development,

describe the mechanisms and benefits of related technologies, and suggest potential uses on a practical level by examining innovations developed in the mechanical engineering laboratories of the American University in Cairo. Particular focus is placed on innovation as a vital means of attaining sustainability. A timely contribution to the debate on environmentally sustainable practices, this book will be indispensable to environmentalists, scientists, economists, engineers, development specialists, and policy-makers, as well as being of interest to the lay reader.

**The EIB Circular Economy Guide** Taylor & Francis

This 2017 report sets out recommendations for branch mismatch rules that would bring the treatment of these structures into line with the treatment of hybrid mismatch arrangements as set out in the 2015 Report on Neutralising the Effects of Hybrids Mismatch Arrangements (Action 2 Report).

Sustainability and Innovation OECD Publishing

The EIB Circular Economy Guide aims to

promote a common understanding of circular economy, and raise awareness about and promote circular solutions. The Guide provides information about EIB's lending and advisory activities in this field, and communicates our vision of how the EIB can further support the transition to a circular economy. The Guide is a living document that will be updated in response to our evolving understanding of circular economy needs, opportunities and risks, and growing experience with the appraisal and financing of circular economy projects.

Government at a Glance 2009 Org. for Economic Cooperation & Development  
With the need for sustainability, a focus on developing an economic system that aims at minimizing waste, commonly referred to as the circular economy, is emerging. Circular economy and studies related to it have gained worldwide attention, as it seems to be an effective alternative economic system. Naturally, the circular economy will impact enterprises and will shift how entrepreneurship development and entrepreneurial opportunities are perceived, developed, and resourced. The Handbook of Research on

Entrepreneurship Development and Opportunities in Circular Economy is a collection of pioneering research that advances the understanding of entrepreneurship development, identifies the opportunities, and manages the entrepreneurship development, policies, and programs in order to further a circular economy. In addition to entrepreneurship development and entrepreneurial opportunities, the book will cover and discuss a number of other factors necessary for a successful transformation, such as entrepreneurship and innovation, entrepreneurship and change, and entrepreneurship education. While highlighting topics including consumer consumption, knowledge management, and linear economics, this book is ideally designed for entrepreneurs, small business owners, managers, consultants, organization development specialists, policymakers, researchers, industry experts, academicians, and students.  
*UNDOC, Current Index* Org. for Economic Cooperation & Development  
The 2021 edition includes input indicators on public finance and employment; process indicators include data on

institutions, budgeting practices, human resources management, regulatory governance, public procurement, governance of infrastructure, public sector integrity, open government and digital government. Outcome indicators cover core government results (e.g. trust, political efficacy, inequality reduction) and indicators on access, responsiveness, quality and satisfaction for the education, health and justice sectors.

The Constitution of the Republic of Namibia OECD Publishing

This report, produced by the OECD Observatory of Public Sector Innovation, explores how systems approaches can be used in the public sector to solve complex or “wicked” problems.

*Global Trends 2040* OECD Publishing

Plastic pollution is one of the biggest challenges of the twenty-first century that requires innovative and varied solutions. Focusing on sub-Saharan Africa, this book brings together interdisciplinary, multi-sectoral and multi-stakeholder perspectives exploring challenges and opportunities for utilising digital innovations to manage and accelerate the transition to a circular plastic economy

(CPE). This book is organised into three sections bringing together discussion of environmental conditions, operational dimensions and country case studies of digital transformation towards the circular plastic economy. It explores the environment for digitisation in the circular economy, bringing together perspectives from practitioners in academia, innovation, policy, civil society and government agencies. The book also highlights specific country case studies in relation to the development and implementation of different innovative ideas to drive the circular plastic economy across the three sub-Saharan African regions. Finally, the book interrogates the policy dimensions and practitioner perspectives towards a digitally enabled circular plastic economy. Written for a wide range of readers across academia, policy and practice, including researchers, students, small and medium enterprises (SMEs), digital entrepreneurs, non-governmental organisations (NGOs) and multilateral agencies, policymakers and public officials, this book offers unique insights into complex, multilayered issues relating to the production and management of plastic waste and

highlights how digital innovations can drive the transition to the circular plastic economy in Africa. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

*Medium Term Expenditure Framework* OECD Publishing

In the midst of climate change, responsible business practices and ecological modernization become essential tools for the promotion of sustainability. Due to the current level of demand for eco-friendly products and services, there is a need for green training and green human resource development to support green creativity and eco-innovation for sustainability. By incorporating green initiatives into human resource practices, organizations can maintain a positive impact on the environment. With a full understanding of sustainable business practices, positive impacts on the environmental management field become easier to produce. Human Resource Management Practices for Promoting Sustainability is a pivotal reference source

that explores the incorporation of green initiatives into all aspects of human resource management practices in a variety of industries. The book delivers a discussion on green human capital, collective green intelligence, and competencies that are essential to cope with the challenges in Industry 4.0. It also provides a basis for green recruitment and selection processes as a way of promoting pro-environmental behavior in the labor markets. While highlighting a broad range of topics including employee relations, knowledge management, and recruitment, this book is ideally designed for executives, entrepreneurs, human resource managers, academicians, researchers, and students. The book is also suitable for conventional and corporate universities looking to meet sustainable development goals as well as policymakers as it provides a guideline in designing and implementing green creativity and eco-innovation based on a wide range of global issues confronting sustainability in the Fourth Industrial Revolution.

This publication highlights the impact of culture on local economies and the methodological issues related to its identification.

#### **Debates of the National Assembly**

European Investment Bank

This report looks at the capacity and capabilities of civil servants of OECD countries and suggests approaches for addressing skills gaps through recruitment, development and workforce management

American Doctoral Dissertations IGI Global Worldwide, Namibia ranks high regarding gender equality. However, many women are intimidated by violence perpetrated by men. This book is based on a social anthropological field research in the small town of Outjo, situated in Northern Central Namibia, over a period of 14 months. Gender is learnt, lived and reproduced in a societal frame. Violence against women, too, is perpetrated by men in a societal context. By using mainly qualitative research methods Sonja Gierse-Arsten looks at male and female perspectives to reach a holistic understanding and to provide a basis for sustainable changes towards equal gender relations. She traces

the transition from a hierarchical gender system during colonial times to the aspired equal gender relations in present Namibia. Current challenges characterised by poverty and great economic inequalities form the framework in which gender is performed and violence perpetrated. This study offers inspirations to re-think gender to reach substantive gender equality and to overcome the normalisation of violence.

#### **The Path to Becoming a Data-Driven Public Sector** OECD Publishing

The report analyses the ways in which unpaid care work is recognised and organised, the extent and quality of care jobs and their impact on the well-being of individuals and society. A key focus of this report is the persistent gender inequalities in households and the labour market, which are inextricably linked with care work. These gender inequalities must be overcome to make care work decent and to ensure a future of decent work for both women and men. The report contains a wealth of original data drawn from over 90 countries and details transformative policy measures in five main areas: care, macroeconomics, labour, social protection

and migration. It also presents projections on the potential for decent care job creation offered by remedying current care work deficits and meeting the related targets of the Sustainable Development Goals.

Performance Audit Report on the Ministry of Basic Education, Sport and Culture IGI Global

This study is the product of a comparative research project examining government transparency and civil participation in nine African countries. The project involved civil society organisations in Botswana, Burkina Faso, Namibia, Uganda, Ghana, Kenya, Nigeria, South Africa and Zambia, working in liaison with the Africa Budget Project of IDASA's Budget Information Service in South Africa.

*Commerce Business Daily* Cosimo Reports

Twenty-first century governments must keep pace with the expectations of their citizens and deliver on the promise of the digital age. Data-driven approaches are particularly effective for meeting those expectations and rethinking the way governments and citizens interact. This report highlights the important role data can play in creating conditions that improve public services, increase the effectiveness of public spending and inform ethical and privacy considerations. It presents a data-driven public sector framework that can help countries or organisations assess the elements needed for using data to make better-informed decisions across public sectors.
