Urología general de Smith Ed. Médica Panamericana
 This book contains a compilation of papers based on presentations made at the International Symposium on Penile Disorders held in Hamburg, Germany, 26-27 January 1996, under the Chairmanship of Hartmut Porst. This was a unique conference in that it comprehensively addressed various disorders that affect the organ situated at the "center of the male", the penis. As an important beginning, the sociocultural aspects of the erect phallus were presented by G. Wagner from Copenhagen. The anatomy of the penis and the physiological conditions of erection were then discussed by K. -P. J Unemann from Mannheim, Germany. Previous conferences on the penis had concentrated only on specific areas of disease such as impotence. However, it became readily apparent that at this conference something new for almost every aspect of disease would be discussed, including congenital disorders such as hypospadias and epispadias, sexually transmitted and noninfectious dermatological diseases,

and congenital and acquired penile curvatures and penile fractures. An excellent presentation of managing penile cancer by stage related therapeutic decision was presented by S. C. Muller from Bonn, Germany. There is no better person to present a discussion of Peyronie's disease in 1996 from a historical and management perspective than J. Pryor from London, UK. This same degree of expertise was also demonstrated by I. Saenz de Tejada from Madrid, Spain, regarding priapism.

This book is designed to meet the needs of nurse practitioners, advanced practice nurses and also physician assistants, working in urology. The full range of domains of practice is covered, including assessment and diagnosis, clinical management, nurse practitioner and patient relationships, consultation, health promotion and disease prevention, and practice management and research. Some background knowledge is assumed regarding the normal anatomy and physiology of the genitourinary system and the pathophysiology underlying specific urologic health-related problems. The Nurse Practitioner in Urology will be invaluable in ensuring that the nurse practitioner is able to maintain exemplary management of patients with acute and chronic urologic conditions in a wide variety of settings, including independent practices, hospitals, and academic urologic practices. Bladder Pain Syndrome: A Guide for Clinicians provides a comprehensive update in the pathophysiology, epidemiology, terminology, evaluation and treatment of patients with pelvic pain perceived to be related to the urinary bladder. The volume covers the tremendous evolution during the last decade in our understanding of pain syndromes and their diagnosis and treatment. It is now clear that Bladder Pain Syndrome belongs to the family of pain syndromes, and therefore treatment has moved from the treatment of the bladder to the treatment of a pain syndrome with the special problems this presents when the pain syndrome involves urinary symptoms. Interstitial Cystitis was poorly defined and the interpretation and patient selection differed enormously around the world in many ways, making exchange of information unreliable and confusing. Bladder Pain Syndrome is clearly defined and the result is a much better patient selection. This volume provides state of the art background for making a correct evaluation and diagnosis of patients with pelvic pain and voiding problems resulting in a more focused treatment to the benefit of the patients. The volume also covers the close relationship between different pain syndromes including those outside the pelvis. Bladder Pain Syndrome: A Guide for Clinicians will be of great utility to urologists, gynecologists and all health professionals dealing with patients with pelvic pain.

La Criminología y otras ciencias forenses desarrollaron distintas técnicas, especialmente la autopsia psicológica, para discriminar entre homicidio, suicidio y accidente. El objeto del estudio es analizar los factores de riesgo, presentes en el MAPI y aplicarlos al caso. Se utilizó como instrumento el Modelo de Autopsia Psicológica Integrado (MAPI), técnica de valor probatorio usado en muertes de etiología violenta. La técnica se adaptó al perfil de la víctima, de 63 ítems se redujo a 51 preguntas cerradas y

estructuradas. Para elaborar el PV se hizo un análisis criminológico del modus operandi, escena del crimen y motivación para el hecho, a través de los datos personales y jurídicos obtenidos (autopsia, exhumaciones?). Se aplicó una entrevista a la familia compuesta de 15 preguntas abiertas. Se analizó la muerte autoerótica producto de una parafilia, precursores en la infancia o adolescencia y su relación con la conducta sexual. Los resultados obtenidos, se observan que en la categoría FR para el suicidio, el trastorno mental no es una condición sine qua non; el alcohol y las drogas son FR cuando existen comorbilidad. En el homicidio son FR elevados la exposición continua a la violencia, sufrir abusos sexuales en la infancia y sufrir malos tratos.

Smith's General Urology Springer

In this precise and authoritative urological text Mr Ronald Brown and his associates have scored two firsts. In its emphasis throughout on the importance of clinical assessment, history taking and physical examination, together with its wealth of illustrations, it offers a unique view of genitourinary medicine; and it is the first clinical urology text to be written by an Australian. The authors' approach to their subject is ideal for students and physicians confronted with patients with genitourinary problems. The text is concise, the references valuable and the index comprehensive. I was particularly interested in the chapter on Paediatric Urology with its admirably succinct of hypospadias, but the outstanding feature of the whole book discussion is the line drawings and illustrative x-rays, not only excellent in themselves but in their presentation: the clear uncrowded layout making it easy for the reader to consult the appropriate illustration nearby, and where helpful there has been no hesitation in using the same diagram in several different places. If my students know everything that's in this book they will know more than most urologists. It is especially gratifying to me to see this fine book emanate from Australia and to know that four of the authors have had their stimulus to excellence in work here at UCLA.

Para los urólogos, representa una herramienta imprescindible para el acceso rápido a guías de actuación urgente (priapismo, hematuria, sepsis, traumatismos urogenitales, gangrena de Fournier, pacientes urológicos SARS-CoV-2, etc.) y prescripción farmacológica del paciente ingresado (preparación intestinal, profilaxis tromboembólica y antimicrobiana, alteraciones hidroelectrolíticas y metabólicas, anticoagulación y antiagregación, etc.). Proporciona asimismo directrices claras sobre patología oncológica (con un enfoque extremadamente pragmático y conciso), urología infantil, andrología avanzada (enfermedad de La Peyronie, hipogonadismos, recuperación espermática, criopreservación de semen, etc.), enfermedad litíásica, patologías infrecuentes (TBC urogenital, dermatosis peneanas, erecciones nocturnas recurrentes, ascitis quillosa postquirúrgica, etc.), cifras normales de laboratorio así como aspectos legales en Urología. También resultan muy interesantes

los códigos QR que enlazan con páginas web de consentimientos informados, referencias sobre fármacos y sus fichas técnicas, calculadoras médicas o nomogramas predictivos para el manejo clínico del cáncer urológico.
