Excerpt from *Color Blindness: Supplemental Report on Ophthalmology, Read Before the Medical Society of the State of California, April, 1882* In 1876, or 1877, Professor Holmgren, of Upsala, Sweden, published a monograph on *Color Blindness, its Dangers and Detection*, and gave us the simple, sure, and rapid method of determining the defect, by means of the Berlin wools or worsteds. stroke, spine and neurooncology. Practical tips facilitate study with test-taking strategies and things to consider before sitting for an exam. Utilizes Imperial and SI units throughout. *A History of Color* Springer Nature The Color Atlas and Synopsis of Clinical Ophthalmology was developed at Philadelphia's famed Wills Eye Institute. The beauty of this series is the powerful combination of illustrative photographs and a summary approach to the text. While the seven ophthalmic subspecialties in this series, Cornea, Retina, Glaucoma, Oculoplastics, Neuroophthalmology, Pediatrics, and Uveitis, employ varying levels

of visual recognition, a relatively standard format for the text is used for all volumes. The goal of the series is to provide an up-to-date clinical overview of the major areas of ophthalmology for students, residents, and practitioners in all the healthcare professions.
