Clinical Oncology Corwin Press
New Synthetic Opioids (NSOs), most of which are illegally produced and sold for recreational use, are posing a serious threat to the health of consumers. Due to the low cost of materials and equipment required for clandestine laboratories production with respect to the production cost of heroin, NSOs are climbing the illegal street and web drug market. Several of these drugs have been involved in a recent rise in acute intoxications and overdose deaths. Since NSOs offer enormous profit potential, and there is strong demand for their use, these drugs are being trafficked by organized crime

and present major challenges for medical professionals facing intoxications and fatalities, law enforcement agencies fighting against their diffusion and policymakers trying to restrain the use and abuse of NSOs. This Research Topic aimed to fill the gap on current knowledge on pharmacology and toxicology, health risks for adult and newborns of NSOs covering both basic scientific as well as epidemiological and clinical aspects. 3 reviews, 3 mini-reviews, 1 original article, 2 case reports and 1 opinion are here presented.

Kevin is determined that he'll never join a gang but his path crosses the Tribe's when he saves one of them from a rival gang. Invited to take their initiation test, Kevin plans to break the oath of secrecy and tell everyone. But he falls under the spell of the gang leader, Salom, and becomes a member. Kevin then discovers how hard it is to break away from the Tribe's rules and Salom's power, for when he's challenged Salom always makes you sorry. In this case he fastens on to Kevin's little sister, Glory, and Kevin is forced to take the initiation test again as his sister freezes with horror crossing a beam high above a

ruined building.

Bound Lives Bloomsbury Publishing
This volume contains the Proceedings of the Serono Symposium on Pre implantation Embryo Development, held in Newton, Massachusetts, in 1991. The idea for the symposium grew out of the 1989 Serono Symposium on Fertilization in Mammals* at which preimplantation development was the predominant suggestion for a follow-up topic. This was indeed a timely subject in view of the recent resurgence of interest in this fundamental phase of embryogenesis and its relevance to basic research and applied fertility studies in humans, food-producing animals, and endangered species. The symposium brought together speakers from a broad range of disciplines in order to focus on key regulatory mechanisms in embryo development, using a wide variety of animal models, and on representative topics in human preimplantation embryogenesis. The culmination of preimplantation development is a blastocyst containing the first differentiated embryonic tissues and capable of initiating and sustaining pregnancy. The central objective of the

symposium was to throw light on the regulation of cellular and molecular events underlying blastocyst formation. It was particularly appropriate that the date of the symposium marked the 20th anniversary of the publication of the classic volume *Biology of the Blastocyst*, the proceedings of an international workshop held in 1970. This book, which summarized most of the information then available on this topic in mammals, was edited by the pioneer in blastocyst research, Dr. Richard Blandau, who was the guest speaker at the symposium. A must-have reference, this new edition provides practical information on treatment guidelines, details of diagnosis and therapy, and personal recommendations on patient management from experts in the field. Consistently formatted chapters allow for a user-friendly presentation for quick access of key information by the practicing clinician. Completely updated, this new edition includes all of the latest developments in treatment strategies of medical, surgical and radiation oncologists.

The Restoration of Learning Alfred Music
The church of Durham, founded in 995, claimed in the Middle Ages to be in origin the church of Lindisfarne or Holy Island, the members of which had fled in the face of Viking raids and had wandered for long across northern England, before re-establishing their church at Chester-le-Street in Co. Durham and then at Durham itself. The text edited and translated here for the first time for over a century is the most complete and detailed account of the history of that church. Important as a piece of early post-Conquest historiography by an author about whom much is now known, the text is fascinating for the details it gives about the ecclesiastical community of Durham, the miracles which its members believed had occurred, and the place of the church of Durham in relation to the lands and secular inhabitants of northern England.

One girl's mission to find life in space leads to an out-of-this-world adventure perfect for the astronaut-in-training in your life. Una loves imagining a life in space. Life on Earth is just so-so. But how will she get there? Can she complete her mission

to discover life in space? Oh! And did she remember to feed her goldfish? From award-winning creator Philip Bunting, *Give Me Some Space* is a delightful story that expertly merges nonfiction facts with imaginative play. Readers will love blasting off with Una, and learning along the way!

A Lab of My Own American Psychiatric Pub

The Speech Situation is a term worn with age in the teaching of public speaking in America. That it is comprised of occasion, speaker, and topic is a gross oversimplification. It also includes challenge, anxiety, emotion, fear, responsibility, faults of memory, and instants of pride. Out of the circumstances arise an increase in heart rate, a change in blood pressure, an abnormal pattern of breathing, a noticeable build up in perspiration, and an ongoing evaluation. For students this may be merely a grade or perhaps a series of evaluative remarks, possibly addressed both to the speaker and the other participants, the audience. It may entail a replaying of a record of the speech, indeed a videotape. Most important is the lasting impression that

remains with all of the participants. What of the vocabulary of the speaker under the circumstances of the speech situation?

This speaker - in the major portions of this work we may say, "this young man" - has spent time seeking an appropriate topic. He has outlined a composition around a central idea or thesis. He has marshaled evidence, details. He has framed an opening paragraph. He has been admonished not to give an essay, but to strive for audience contact, interpersonal communication. He makes his audible approach through his vocabulary and accompanying phonology. Under the tension, the speaker repeats; he adds meaningless vocalizations in periods that might logically be pauses. There are slips of the tongue. At worst, failing, he withdraws to await another day.

Grants African Books Collective

A young farmer and his wife who have migrated to Tanzania from Kenya become embroiled in issues of personal jealousy and materialism, and a melodramatic tale of tribal hatreds ensues. The novel explores Ogot's concept of the ideal African wife: obedient and submissive to her husband; family and community orientated; and committed to non-materialist goals. The style is distinctively ironic giving the story power and relevance. Grace Ogot has been employed in diverse occupations as a novelist, short story writer, scriptwriter, politician, and representative to the UN. Some of her other works include *The Island of Tears* (1980), the short story collection *Land Without Thunder* (1988), *The Strange Bride* (1989) and *The Other Woman* (1992). *The Promised Land* was originally published in 1966, and has since been reprinted five times.

Bound Lives chronicles the lived experience of race relations in northern coastal Peru during the colonial era.

Rachel Sarah O'Toole examines how Andeans and Africans negotiated and employed casta, and in doing so, constructed these racial categories. Royal and viceregal authorities separated "Indians" from "blacks" by defining each to specific labor demands. Casta categories did the work of race, yet, not all casta categories did the same type of work since Andeans, Africans, and their descendants were bound by their locations within colonialism and slavery. The secular colonial legal system clearly favored indigenous populations. Andeans were afforded greater protections as "threatened" native vassals. Despite this, in the 1640s during the rise of sugar production, Andeans were driven from their assigned colonial towns and communal property by a land privatization program. Andeans did not disappear, however; they worked as artisans, muleteers, and laborers for hire. By the late seventeenth and early eighteenth centuries, Andeans employed their legal status as Indians to defend their prerogatives to political representation that included the policing of Africans. As rural slaves, Africans often found

themselves outside the bounds of secular law and subject to the judgments of local slaveholding authorities. Africans therefore developed a rhetoric of valuation within the market and claimed new kinships to protect themselves in disputes with their captors and in slave-trading negotiations. Africans countered slaveholders' claims on their time, overt supervision of their labor, and control of their rest moments by invoking customary practices. *Bound Lives* offers an entirely new perspective on racial identities in colonial Peru. It highlights the tenuous interactions of colonial authorities, indigenous communities, and enslaved populations and shows how the interplay between colonial law and daily practice shaped the nature of colonialism and slavery.

What was it like to be a woman scientist battling the “old boy's” network during the 1960s and 1970s? Neena Schwartz, a prominent neuroendocrinologist at

Northwestern University, tells all. She became a successful scientist and administrator at a time when few women entered science and fewer succeeded in establishing independent laboratories. She describes her personal career struggles, and those of others in academia, as well as the events which lead to the formation of the Association of Women in Science, and Women in Endocrinology, two national organizations, which have been successful in increasing the numbers of women scientists and their influence in their fields. The book intersperses this socio-political story with an account of Schwartz's personal life as a lesbian and a description of her research on the role of hormones in regulating reproductive cycles. In a chapter titled “Don't Ask, Don't Tell,” she examines the “evidence” from a scientist's point of view for the hormonal and genetic theories for homosexuality. Other chapters provide advice on mentoring young scientists and a

discourse on why it matters to all of us to have more women doing and teaching science. She also describes the process of putting together an interdisciplinary Center on Reproductive Science at Northwestern, which brought together basic and clinical scientists in an internationally recognized program of research and practice.
