Standards-based Lesson Plans LernerClassroom

Excerpt from *How to Teach Geography: A Plan for an Elementary and a Scientific Course* Young children are eager to learn and have a wonderful aptitude for gaining knowledge from things; for this reason they must be taught objectively. With them the teacher is everything, the text-book nothing. The first years of a child's school life should be devoted to gaining that sort of knowledge and that sort of mental discipline which will enable him in the upper grades to come to new knowledge by thinking, rather than by reading what others have thought. For this reason this course in geography is divided into two, an Elementary and a Scientific Course. The first is adapted to the upper primary and intermediate grades, the second to the grammar and high school grades. Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

Geography Lesson Plan Resource Book

It includes a CD-ROM that contains the material in Word and PDF format.

Outdoor Geography

Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

The Ultimate Geography and Timeline Guide

This teacher's guide is to enable the teacher to promote thinking through the use of geography. The book lays out the rationale in learning theory for an issues-based, question-driven inquiry method and proceeds through a simple model of progression from identifying key questions to developing generalizations. Students study issues of geographic significance by pursuing answers to geographic

questions, in the process developing meanings and understandings, skills, and personal perspectives, values and attitudes. There is a high value on active learning and higher-level thinking in the materials. Each chapter contains several classroom activities for student decision-making and analysis. The chapters include the following: (1) "Identifying Key Questions To Plan Learning Activities"; (2) "Planning Learning Activities To Reach Generalizations and Decisions"; (3) "Reaching Generalizations and Decisions through Processing and Interpreting Data"; (4) "Interpreting and Analyzing Attitudes and Values; and (5) "Learning through Geography. Extensive maps, charts and figures accompany the text. Contains 75 references. (EH)
