Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

In answer to this timeless question, award winning documentary filmmaker, Lois Farfel Stark, takes the reader on a remarkable journey from tribal ceremonies in Liberia and the pyramids in Egypt, to the gravity-defying architecture of modern China. Drawing on her experience as a global explorer, Stark unveils a crucial, hidden key to understanding the universe: Shape itself. *The Telling Image* is a stunning synthesis of civilization's changing mindsets, a brilliantly original perspective urging you to re-envision history not as a story of kings and wars but through the lens of shape. In this sweeping tour through time, Stark takes us from migratory humans, who imitated a web in round-thatched huts and stone circles, to the urban ladder of pyramids and skyscrapers, organized by hierarchy and measurements, to today's world of interconnected networks. In *The Telling Image* Stark reveals how buildings, behaviors, and beliefs reflect humans' search for pattern and meaning. We can read the past and glimpse the future by watching when shapes shift. Stark's beautifully illustrated book asks of all its readers: See what you think.

In *Economic Development and Transition*, renowned development economist Justin Yifu Lin argues that economic performance in developing countries depends largely on government strategy. If the government plays a facilitating role, enabling firms to exploit the economy's comparative advantages, its economy will develop

successfully. However, governments in most developing countries attempt to promote industries that go against their comparative advantages by creating various kinds of distortion to protect nonviable firms in priority industries. Failing to recognize the original intention

of many distortions, most governments in transition economies attempt to eliminate those distortions without addressing firms' viability problems, causing economic performance to deteriorate in their transition process. Governments in

successful transition economies adopt a pragmatic dual-track approach that encourages firms to enter sectors that were suppressed previously and gives necessary support to firms in priority industries before their viability issue is addressed.
