n. The International Handbook of

Occupational Therapy Interventions

breaks with this tradition, organized by

type of intervention (based on recommendations in the International Classification of Functioning) rather than disability, medical condition, or level of impairment. This innovative, user-friendly system identifies candidates for particular interventions in terms of the range of syndromes and illnesses they are applicable to, encouraging critical thinking, problem solving, and best practice. The book's wide spectrum of interventions coupled with its

international perspective creates a unique source of evidence-based strategies for improving patients' adaptation, functioning, relearning, recovery, and the prevention of ill health. The Handbook: Describes interventions in such areas as environmental accessibility, ergonomics, pain management, sensory functional training, electric prostheses, music therapy, psychoeducation, and cognitive teaching. Features interventions suited to all areas of daily life: self maintenance, home, work, and leisure. Clarifies the occupational therapist's role in multidisciplinary care. Includes material on accident/illness prevention and health promotion strategies. Supplies reference lists of studies regarding the clinical efficacy of

interventions. Demonstrates the use of a common technical language for the field. Occupational and physical therapists, rehabilitation nurses and technicians, psychiatrists, and health psychologists will find the International Handbook of Occupational Therapy Interventions a source of practice-enhancing tools and ideas. Its clarity of presentation makes it highly useful to readers in related fields (such as insurance case workers and ergonomic architects and engineers) as well.

"In pediatrics, occupational therapy practitioners are concerned most with positively impacting the extent to which children and their families are able to successfully and meaningfully go about their daily lives, whether it be playing,

learning, working, caring for oneself or others, or socializing. Clinical decisions made throughout the evaluation process ultimately shape what and how occupational therapy practitioners deliver interventions, perhaps making the evaluation process the most important and interesting part of the service delivery process. It is the context where we first come know and appreciate our clients, their specific situations, and discover what it is that we, as occupational therapy practitioners can do to be of most help"-- Provided by publisher.
