Basic Reading Inventory Cambridge University Press

Recognizing the characteristics of children with learning disabilities and deciding how to help them is a problem faced by schools all over the world. Although some disorders are fairly easily recognizable (e.g., mental retardation) or very specific to single components of performance and quite rare (e.g., developmental dyscalculia), schools must consider much larger populations of children with learning difficulties who cannot always be readily classified. These children present high-level learning difficulties that affect their performance on a variety of school tasks, but the underlying problem is often their difficulty in understanding written text. In many instances, despite good intellectual abilities and a superficial ability to cope with written texts and to use language

appropriately, some children do not seem to grasp the most important elements, or cannot find the pieces of information they are looking for. Sometimes these difficulties are not immediately detected by the teacher in the early school years. They may be hidden because the most obvious early indicators of reading progress in the teacher's eyes do not involve comprehension of written texts or because the first texts a child encounters are quite simple and reflect only the difficulty level of the oral messages (sentences, short stories, etc.) with which the child is already familiar. However, as years go by and texts get more complex, comprehension difficulties will become increasingly apparent and increasingly detrimental to effective school learning. In turn, studying, assimilating new information, and many other situations

requiring text comprehension -- from problem solving to reasoning with linguistic contents -- could be affected. Problems with decoding, dyslexia, and language disorders have attracted more interest from researchers than have specific comprehension problems and have occupied more room in specialized journals. Normal reading comprehension has also been a favorite with researchers. However, scarce interest has been paid to subjects who have comprehension difficulties. This book is an attempt to remedy this situation. In so doing, this volume answers the following questions: * Does a reading comprehension problem exist in schools? * How important and widespread is the problem? * Is the problem specific? * How can a reading comprehension difficulty be defined and identified? * Does the "syndrome" have a single pattern or can different subtypes be identified? * What are the main characteristics associated with a reading comprehension difficulty? * When can other well-identified problems add to our understanding of reading comprehension difficulties? * Which educational strategies are effective in preventing and treating reading comprehension difficulties? * What supplementary information can we get from an international perspective?

Developing Reading Comprehension "In recent years the debate about teaching young children to read has tended to focus upon equipping them with the crucially important knowledge and skills they need to read words accurately in and out of context, that is to say, teaching them how the alphabet works for reading and spelling. While such knowledge and skills are essential, more is required for children to become literate, fluent readers who understand what they read. In short, the goal of reading is comprehension. This book scrupulously examines the obstacles to reading comprehension and exemplifies what can be done to help children overcome them. It is an important and timely contribution to securing high-quality teaching of the range of attributes children need to become fully-fledged readers." Sir Jim Rose, CBE "The studies

by Professors Charles Hulme and Maggie Snowling and their team over two decades based around the Reading Intervention Programme are the most sustained, comprehensive and rigorous research series on reading yet conducted in the UK. Their increasing focus on children who experience the most difficulty in reading is exactly where attention should be directed. This volume summarises the team's achievements to date, and is most eagerly awaited." Greg Brooks, Emeritus Professor of Education, University of Sheffield, Member of European High Level Group of Experts on Literacy "Developing Reading Comprehension presents a landmark study from the top research team in the UK on how to improve reading comprehension. It's an exemplary masters-level textbook written with undergraduate-level lucidity and approachability." Colin Harrison, Emeritus Professor of Literacy Studies in Education, University of Nottingham A significant minority of children aged 7-11, despite being able to read fluently and accurately,

have difficulty extracting meaning from text. This detailed guide offers three evidence-based intervention programmes, drawn from the cutting edge of educational psychology, for improving the reading skills of children in this group. It includes a definitive introduction to the characteristics of the 'poor comprehender profile', and explains how to monitor and assess students' experiences and learning outcomes. With invaluable strategies for teachers, psychologists and special educational needs coordinators, the book will help professionals to support learners in their efforts to explore the full richness of language and to read with real understanding.
