Evidence based practice is now widely accepted as a fundamental tenet of midwifery. The importance of evidence in defining midwifery policy and practice in the UK health system, and others, is acknowledged and enduring. While the development and evaluation of research in midwifery is well charted, the question of how such evidence is incorporated into practice has, to date, received less attention and discussion in the midwifery profession. Answering this need, Evidence Based Midwifery focuses on the dissemination and use of evidence for midwifery practice, and explores midwives' experiences in using the evidence base to inform policy and enhance clinical practice. Written by a highly-regarded and diverse group from the UK and international midwifery community, Evidence Based Midwifery addresses issues of relevance to all midwives whether clinical practitioners or educators, students or supervisors, researchers or managers. Issues that influence evidence based midwifery are discussed, and topics covered

include problem based learning, implementation of evidence based guidelines and the involvement of service users. Edited by founder members of the Evidence Based Midwifery Network International collaboration with contributions from the UK, Greece, Canada and the Netherlands Primary focus on the incorporation of evidence into midwifery practice Real-life examples throughout

Inseminasi buatan merupakan bioteknologi reproduksi terapan pada kerbau yang kini mulai dikembangkan dan telah menjadi kebutuhan bagi peternak untuk mengembangkan populasi dan mutu genetik kerbau karena IB dilakukan dengan menggunakan semen pejantan unggul. Inseminasi buatan menggantikan proses kawin alam yang secara alami dilakukan dengan mempertemukan kerbau jantan dan betina yang selanjutnya akan terjadi kopulasi. Proses kopulasi ini digantikan dengan peranan manusia dan peralatan khusus sehingga menjadi lebih mudah. Efisiensi reproduksi diharapkan dapat dicapai dan dapat dimanfaatkan dengan maksimal melalui penerapan teknologi IB pada kerbau. Buku Fisiologi Reproduksi dan Inseminasi Buatan pada Kerbau merupakan buku referensi yang diperuntukkan bagi semua kalangan pembaca. Buku ini berisi materi dan pengetahuan seputar bidang inseminasi buatan pada kerbau, pada bagian awal buku ini membahas tentang sejarah perkembangan inseminasi buatan hingga membahas tentang struktur organ reproduksi kerbau jantan dan betina. Bagian selanjutnya merupakan materi tentang siklus estrus dan waktu yang tepat untuk melakukan IB yang akan membantu para praktisi dan peternak dalam memahami waktu yang tepat untuk melaksanakan IB. Bagian berikutnya dari buku ini yaitu membahas tentang penyakit reroduksi serta pola pemeliharaan yang baik bagi calon induk betina dan perawatan pejantan sumber semen. Buku ini juga dapat dipergunakan oleh mahasiswa dalam menyusun proyek akhir ataupun karya ilmiah lainnya dikarenakan banyak materi dan teori pada buku ini yang dapat digunakan sebagai landasan pemikiran dan diharapkan dapat dikembangkan secara lebih mendalam. Diseases of Ear, Nose & Throat Penerbit Salemba

What if we designed for all of our senses? Suppose for a moment that sound, touch, and odor were treated as the equals of sight, and emotion considered as important as cognition. What would our built environment be like if sensory response, sentiment, and memory were critical design factors, the equals of structure and program? In Sensory Design, Joy Monice Malnar and Frank Vodvarka explore the nature of our responses to spatial constructs--from various sorts of buildings to gardens and outdoor spaces, to constructions of fantasy. To the degree that this response can be calculated, it can serve as a typology for the design of significant spaces, one that would sharply contrast with the Cartesian model that dominates architecture today. In developing this typology, the authors consult the environmental sciences, anthropology, psychology, and architectural theory, as well as the spatial analysis found in literary depiction. Finally, they examine the opportunities that CAVE and other immersive virtual reality technologies present in furthering a new, sensory-oriented design paradigm. The result is a new philosophy of design that both celebrates our sensuous occupation of the built environment and creates more humane design. A revolutionary approach to the built environment that embraces all of our senses and modes of understanding.
