*The Beekeeper* Patagonia  
 Why are trees so important? How many types are there? How do they benefit the environment and wildlife? This book, by the award-winning author Piotr Socha, answers these questions and more, tracking the history of trees from the time of the dinosaurs to the current day.  
**Sauvons les abeilles** Skyhorse  
 Leaving the lavender fields of Provence behind him, a young man sets off on a journey that will lead him all the way to Africa where deep in the interior, he discovers the mysterious Land of the Bees. Among those he encounters on his way are a penniless painter who bears more

than a striking resemblance to Van Gogh, a dishevelled wanderer who could only be Rimbaud, and finally a woman with skin the colour of honey.

*The Sacred Hill* Random House Canada  
 This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work is in the "public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for

being an important part of keeping this knowledge alive and relevant.  
Before Nature Dies Legare Street Press  
 Apparues sur la Terre il y a plus de 100 millions d'années, les abeilles sont aujourd'hui menacées de disparition ! En 10 ans, la population d'insectes volants a chuté de plus de 40% en Europe...  
 Comment sauver ces discrets acteurs de la biodiversité qui assurent la pollinisation la quasi-totalité de nos fleurs sauvages et de nos plantes cultivées ? Abondamment illustré, cet ouvrage nous fait découvrir le monde complexe des abeilles mellifères et de leurs cousines moins connues, les abeilles sauvages. Saviez-vous qu'une abeille domestique débute comme nettoyeuse au sein de la ruche ? Ou que l'osmie cornue peut faire son nid dans une coquille d'escargot ? Pollution de

l'environnement, disparition de leur habitat naturel, utilisation massive des pesticides ou présence d'espèces invasives... L'auteur fait le bilan des périls qui menacent les abeilles, mais propose également des solutions concrètes pour passer à l'action et mieux les protéger, en ville comme à la campagne. Les solutions existent, sauvons les abeilles !

**Correspondance, 1812-1876** Routledge  
The basis for the Major Motion Picture Mr. Holmes starring Ian McKellen and Laura Linney and directed by Bill Condon. It is 1947, and the long-retired Sherlock Holmes, now 93, lives in a remote Sussex farmhouse with his housekeeper and her young son. He tends to his bees, writes in his journal, and grapples with the diminishing powers of his mind. But in the twilight of his life, as people continue to look to him for answers, Holmes revisits a case that may provide him with answers of his own to questions he didn't even know he was asking—about life, about love, and about the limits of the mind's ability to know. A novel of exceptional grace and literary sensitivity, *A Slight Trick of the Mind* is a brilliant imagining of our greatest fictional detective and a stunning inquiry into the mysteries of human connection.

**Progrès apicole** Little Book of  
A critic in *The Galaxy* who admired Hugo's *The Man Who Laughs* (1869) and spoke with him about it called Hugo a dreamer, a radical, a splendid, salient figure. It is one of his bitterest indictments of the cruelty and selfishness of society....

**Dictionnaire de la langue française** Little, Brown Books for Young Readers  
- Où sont passés les papillons ? Entendez-vous toujours autant les cigales et les sauterelles ? - L'urbanisme, l'agriculture intensive et certains traitements ne laissent que peu de place à la diversité du vivant et aux millions d'espèces d'insectes sur la planète. - Heureusement, même si vous n'avez pas de jardin, il est possible d'agir et de s'engager pour les aider. Face à une société anthropocentrée, François Lasserre se place en porte-parole afin de nous amener à voir les insectes pour ce qu'ils sont intrinsèquement, des partenaires de nos vies. Il nous invite à changer les choses et nous propose ici 10 actions concrètes pour que chacun puisse agir efficacement à son échelle !

**Little Book of Birds** The Simon and Schuster

Following the format of the successful 'Sasol Birds of Southern Africa', this is an identification guide to the birds of Madagascar and the other Indian Ocean islands.

• Nos abeilles meurent jour après jour et nous assistons, spectateurs, à un véritable effondrement de l'écosystème. • 40 % de notre alimentation dépend pourtant de la pollinisation. Qu'avons-nous fait pour en arriver là ? Apiculteur amateur à Tréogat, Sven Niel poste sur Facebook, en avril 2018, une vidéo intitulée "Mes abeilles sont en train de crever !" Il dénonce, dans un acte spontané, l'hécatombe à laquelle il fait face : une mortalité de ses abeilles hors norme. Cette vidéo sera visionnée 7 millions de fois. Porte-voix d'un mouvement d'exaspération, Sven Niel nous invite à devenir acteur du changement grâce à 10 solutions concrètes pour que chacun puisse agir au quotidien !

**Mystery and Chocolate** Academica Press  
"Now you young twerps want a new name for your generation? Probably not, you just want jobs, right? Well, the media do us all such tremendous favors when they call you Generation X, right? Two clicks from the very end of the alphabet. I hereby declare you Generation A, as much at the beginning of a series of astonishing triumphs and failures as Adam and Eve were so long ago." — Kurt Vonnegut, Syracuse University commencement address May 8, 1994  
Generation A is a brilliant, timely and very Couplandesque novel about honey bees and the world we may soon live in. Once again, Douglas Coupland captures the spirit of a generation. In the near future bees are extinct—until one autumn when five people are stung in different places around the world. This shared experience unites them in a way they never could have imagined. Generation A mirrors 1991's Generation X. It explores new ways of looking at the act of reading and storytelling in a digital world. Like much of Coupland's writing, it occupies the perplexing hinterland between optimism about the future and everyday apocalyptic paranoia. Imaginative, inventive and fantastically entertaining, Generation A demonstrates Coupland's unforgettable verve.

**The Last Dogs: The Long Road** Penguin Random House South Africa

This volume incorporates the national standards for the following languages: Arabic, Chinese, Classical Languages, French, German, Italian, Japanese Portuguese, Russian and Spanish.

**Living Things Around Us, On-Level Reader Grade 3 6pk** Fleurus

Buzz from flower to flower with a sweet honeybee in this gorgeous Classic Board Book from critically acclaimed author Kirsten Hall and award-winning illustrator Isabelle Arsenault! Bzzz... What's that? Do

you hear it? You're near it. It's closer, it's coming, it's buzzing, it's humming... A BEE! With zooming, vibrant verse and buzzy, beautiful illustrations, this celebration of the critically important honeybee is now available as a honey-sweet Classic Board Book.

The Routledge Handbook of the History of Sustainability is a far-reaching survey of the deep and contemporary history of sustainability. This innovative resource will help to define the history of sustainability as an identifiable field. It provides a unique resource for advanced undergraduates, graduate students, and scholars, and delivers essential context for understanding the current state and future path of the sustainability movement. The history of sustainability is an increasingly important domain within the discipline of history, which draws on an interdisciplinary set of fields, ranging from energy studies, transportation, and urbanism to environmental history, economics, and philosophy. Key sections in this handbook cover the historiography of sustainability, resilience and collapse in historical societies, the deep roots of sustainability (seventeenth century to nineteenth century), the recent history of sustainability (twentieth century to present), and core issues and key debates in sustainability. This handbook is an invaluable research and teaching tool for those interested in the history and development of sustainability and an essential resource for the many sustainability studies programs that now exist in the world's universities.

**Abeilles en danger** Fleurus

- A charming compendium of birds from around the world, richly illustrated with vintage, postcard-size chromolithographs- Includes key identification features on each bird and concise notes on behavior, habits, and habitats This compact, delightfully illustrated selection of birds from North and South America, Eurasia, Africa, and Australia has a page of descriptive information on each bird combining the factual with the fascinating. Answers to questions like: When does the peacock spread its feathers? Why does the flamingo stand on one leg? Where do Ostriches come from? From what distance can an eagle see its prey? are embedded in each entry. The 79 chromolithographs, part of a private collection, have an appealingly vintage effect.

### Standards for Foreign Language Learning in the 21st Century Europa Editions

Climate change will cause Europe to lose much of its biodiversity as projected by a comprehensive study on future butterfly distribution. The Climatic Risk Atlas of European Butterflies predicts northward shifts in potential distribution area of many European butterfly species. As early warning indicators of environmental change, butterflies are a valuable tool to assess overall climate change impact and to provide some indication on the chances to come nearer to the target of halting the loss of biodiversity by 2010 set by the EU Heads of State in 2001. The Climatic Risk Atlas of European Butterflies is based on the work of scores of scientists from across Europe. They applied climate change models to data collected by tens of thousands of volunteers. The authors say that some climate change is now inevitable and that the extent of the losses will depend on the degree of that change and how we respond to the new threat. Butterflies have already suffered huge losses across Europe following decades of habitat loss and changing farming and forestry practices. As temperatures rise, majority of butterfly species will try to head north. This won't always be achievable. The forestry and farming changes mean that areas of suitable habitat are now often small and too far apart for butterflies to travel between them. The worst-case scenario scientists examined sees the average European temperature rise by 4.1°C by 2080. In that case over 95 per cent of the present land occupied by 70 different butterflies would become too warm for continued survival. The best case-scenario sees a 2.4°C temperature rise. Even this would mean that 50 per cent of the land occupied by 147 different butterflies would become too warm for them to continue to exist there.

Many butterflies will largely disappear from where they are regularly seen now. The Small Tortoiseshell will become absent from a huge swathe of middle and southern Europe and will become restricted to northern Europe. Under the worst-case scenario, rare species like the Spanish Festoon *Zerynthia rumina* would experience a 97% loss from Spain and Southern France, and the Apollo *Parnassius apollo* would suffer a 76% loss from mountainous areas. Climate change is already having an impact on butterflies. Over 60 mobile species with widespread food-plants are known to have spread north in Europe over recent decades, including the Comma *Polygonia c-album*, which is spreading north in the UK at 10km per year. Other species have moved further up mountains. The chief author of Climatic Atlas of European Butterflies is Dr Josef Settele from the Helmholtz Centre for Environmental Research (UFZ) in Germany. He said: "The Atlas shows for the first time how the majority of European butterflies might respond to climate change. Most species will have to shift their distribution radically to keep pace with the changes. The way butterflies change will indicate the possible response of many other insects, which collectively comprise over two-thirds of all species." Dr Martin Warren, Chairman of Butterfly Conservation Europe and one of the authors, said "Evidence points to an acceleration in climate change after 2050 unless there is a significant decrease in global CO2 emissions. This accelerated change would be the final nail in the coffin for many European species. We need to be ready for this worst-case scenario. We need place more emphasis on maintaining large, diverse populations on existing habitats while re-connecting habitats to allow species to move across the landscape. This means working closely with farmers and planners." Dr Ladislav Miko, Director of Nature Conservation at the EU Environment Directorate in Brussels, said: "We strongly welcome this important study which helps us understand how species might respond to climate change. The evidence points to a radical change in species' distribution, which we must plan for within future European policies. The results show the enormous scientific value of records from thousands of volunteers across Europe." Sebastian Winkler, Head of Countdown 2010, stated "The astounding outcomes of this study should remind world leaders once more that if immediate action is not taken, the 2010 biodiversity target will not be reached and biological diversity will continue to decline." The Climatic Risk

The phenomenal New York Times bestseller that "explores the upstairs-downstairs goings-on of a posh Parisian apartment building" (Publishers Weekly). In an elegant hôtel particulier in Paris, Renée, the concierge, is all but invisible—short, plump, middle-aged, with bunions on her feet and an addiction to television soaps. Her only genuine attachment is to her cat, Leo. In short, she's everything society expects from a concierge at a bourgeois building in an upscale neighborhood. But Renée has a secret: She furtively, ferociously devours art, philosophy, music, and Japanese culture. With biting humor, she scrutinizes the lives of the tenants—her inferiors in every way except that of material wealth. Paloma is a twelve-year-old who lives on the fifth floor. Talented and precocious, she's come to terms with life's seeming futility and decided to end her own on her thirteenth birthday. Until then, she will continue hiding her extraordinary intelligence behind a mask of mediocrity, acting the part of an average pre-teen high on pop culture, a good but not outstanding student, an obedient if obstinate daughter. Paloma and Renée hide their true talents and finest qualities from a world they believe cannot or will not appreciate them. But after a wealthy Japanese man named Ozu arrives in the building, they will begin to recognize each other as kindred souls, in a novel that exalts the quiet victories of the inconspicuous among us, and "teaches philosophical lessons by shrewdly exposing rich secret lives hidden beneath conventional exteriors" (Kirkus Reviews).

“The narrators’ kinetic minds and engaging voices (in Alison Anderson’s fluent translation) propel us ahead.” —The New York Times Book Review “Barbery’s sly wit . . . bestows lightness on the most ponderous cogitations.” —The New Yorker

For over twenty years, Patagonia has organized a Tools Conference, where experts provide practical training to help make activists more effective. Now Patagonia has captured Tools’ best wisdom and advice into a book, creating a resource for any organization hoping to hone core skills like campaign and communication strategy, grassroots organizing, and lobbying as well as working with business, fundraising in uncertain times and using new technologies. Patagonia hopes the book will be dog-eared and scribbled in; a solid,

inspiring guide and reliable companion. The book is organized in two sections: Strategies, and Tools. Each chapter, written by a respected expert in the field, covers essential principals as well as best practices. A hands-on case study accompanies each chapter and demonstrates the principles in action. Sprinkled throughout are inspirational thoughts from acclaimed activists, such as Jane Goodall, Bill McKibben, Wade Davis, Annie Leonard, and Terry Tempest Williams. An activist’s companion in the environmental movement.

**A Slight Trick of the Mind** Auzou

From the #1 internationally bestselling author Santa Montefiore—a family rocked by tragedy, a love that lives through time, and a story that will stay in your heart. England, 1932: Grace Hamblin is growing up on a beautiful rural estate. The beekeeper’s daughter, she knows her place and her future—until her father dies

unexpectedly and leaves her alone. Her childhood friend Freddie has recently become her lover, and she is thankful when they are able to marry and take over her father’s duties. But there is another man she just can’t shake from her thoughts... Massachusetts, 1973: Grace’s beautiful, impetuous daughter Trixie Valentine is in love. Jasper Duncliffe is wild and romantic, and in a band that might hit it big. But when his brother dies and he is called home to England, Jasper promises to come back for Trixie one day, if only she will wait for him. Grace tries to support her daughter, but Trixie brushes off her mother’s comfort in the confidence that Jasper’s feelings for her are real... Both mother and daughter are searching for love and happiness, unaware of the secrets that bind them. To find what they are longing for they must confront the past and unravel the lies told long ago.
