This book contains the proceedings of the Serono Symposia USA international symposium on Genetic Models of Immune and Inflammatory Diseases held on October 20 to 23, 1994, in Savannah, Georgia. The advent of methods for introducing genes into the germlines of mice, and for targeted disruption of particular genes by homologous recombination, has provided scientists in many disciplines with an extraordinarily powerful set of analytical tools. Some of the most informative applications of transgenic and gene knockout technology have been in studies of lymphocyte development and activation. The goal of this symposium was to bring together investigators using these genetic approaches for analyzing the immune system, with a view to defining common themes and novel directions. Transgenic mice have a wide variety of important applications in immunology. Defined proteins can be expressed in selected tissues throughout development, thus acquiring the essential characteristic of "self" antigens. Such models have been used to study how immune responses to these artificially created "self" antigens are controlled. Antigen receptors of lymphocytes have been expressed as transgenes, and because lymphocytes are endowed with the unique property of allelic exclusion, such transgenic mice become essentially monospecific. Immunomodulatory agents have been expressed in defined tissues or throughout the body, providing tools for studying the functional consequences of dysregulated expression of biological response modifiers.

La immunologia estudia el sistema de defensa del nostre organisme. És una ciència complexa i difícil d'entendre ja que els seus elements no estan localitzats de forma exacta en un òrgan concret, sinó que és un sistema dinàmic i actiu en què tots els elements que el conformen participen de forma conjunta establint relacions molt estretes de col·laboració. Amb aquets llibre de text es pretén congrega de forma clara i concisa els conceptes bàsics dels diferents elements i funcions del sistema immunitari, de les patologies relacionades i de les principals tècniques d'estudi.
