This practical handbook provides a clearly structured, concise and comprehensive account of the huge variety of atmospheric and related measurements relevant to meteorologists and for the purpose of weather forecasting and climate research, but also to the practitioner in the wider field of environmental physics and ecology. The Springer Handbook of Atmospheric

Measurements is divided into six parts: The first part offers instructive descriptions of the basics of atmospheric measurements and the multitude of their influencing factors, fundamentals of quality control and standardization, as well as equations and tables of atmospheric, water, and soil quantities. The subsequent parts present classical in-situ measurements as well as remote sensing techniques from both ground-based as well as airborne or satellite-based

methods. The next part focusses on complex measurements and methods that integrate different techniques to establish more holistic data. Brief discussions of measurements in soils and water, at plants, in urban and rural environments and for renewable energies demonstrate the potential of such applications. The final part provides an overview of atmospheric and ecological networks. Written by distinguished experts from academia and industry, each of the 64 chapters provides in-depth discussions of the available devices with their specifications, aspects of quality control, maintenance as well as their potential for the future. A large number of thoroughly compiled tables of physical quantities, sensors and system characteristics make this handbook a unique, universal and useful reference for the practitioner and absolutely essential for researchers, students, and technicians.

'Today's Public Relations' works to redefine the teaching of public relations by discussing it's connection to mass

communication, but also linking it to it's rhetorical heritage.

Derived from the renowned multi-volume International Encyclopaedia of Laws, this analysis of media law in Germany surveys the massively altered and enlarged legal landscape traditionally encompassed in laws pertaining to freedom of expression and regulation of communications.

Everywhere, a shift from mass media to mass self-communication has put enormous pressure on traditional law models. An introduction describing the main actors and salient aspects of media markets is followed by in-depth analyses of print media, radio and television broadcasting, the Internet, commercial communications, political advertising, concentration in media markets, and media regulation. Among

the topics that arise for discussion are privacy, cultural policy, protection of minors, competition policy, access to digital gateways, protection of journalists' sources, standardization and interoperability, and liability of intermediaries. Relevant case law is considered throughout, as are various ethical codes. A clear, comprehensive overview of media legislation, case law, and doctrine, presented from the practitioner's point of view, this book is a valuable time-saving resource for all concerned with media and communication freedom. Lawyers representing parties with interests in Germany will welcome this very useful guide, and academics and researchers will appreciate its value in the study of comparative media law.

A concise narrative history that brings the story of the Jewish people marvelously to life. This is a sweeping and powerful narrative history of the Jewish people from biblical times to today. Based on the latest scholarship and richly illustrated, it is the most authoritative and

accessible chronicle of the Jewish experience available. Michael Brenner tells a dramatic story of change and migration deeply rooted in tradition, taking readers from the mythic wanderings of Moses to the unspeakable atrocities of the Holocaust; from the Babylonian exile to the founding of the modern state of Israel; and from the Sephardic communities under medieval Islam to the shtetls of eastern Europe and the Hasidic enclaves of modern-day Brooklyn. The book is full of fascinating personal stories of exodus and return, from that told about Abraham, who brought his newfound faith into Canaan, to that of Holocaust survivor Esther Barkai, who lived on a kibbutz established on a German estate seized from the Nazi Julius Streicher as she awaited resettlement in Israel. Describing the events and people that have shaped Jewish history, and highlighting the important contributions Jews have made to the arts, politics, religion, and science, *A Short History of the Jews* is a compelling blend of storytelling and scholarship that brings the Jewish past

marvelously to life. Justine McGraw Hill Professional
Why did Yugoslavia fall apart? Was its violent demise inevitable? Did its population simply fall victim to the lure of nationalism? How did this multinational state survive for so long, and where do we situate the short life of Yugoslavia in the long history of Europe in the twentieth century? *A History of Yugoslavia* provides a concise, accessible, comprehensive synthesis of the political, cultural, social, and economic life of Yugoslavia—from its nineteenth-century South Slavic origins to the bloody demise of the multinational state of Yugoslavia in the 1990s. Calic takes a fresh and innovative look at the colorful, multifaceted, and complex history of Yugoslavia, emphasizing major social, economic, and intellectual changes from the turn of the twentieth century and the transition to modern industrialized mass society. She traces the origins of ethnic, religious, and cultural divisions, applying the latest social science approaches, and drawing on the breadth of recent state-of-the-art literature, to present a

balanced interpretation of events that takes into account the differing perceptions and interests of the actors involved. Uniquely, Calic frames the history of Yugoslavia for readers as an essentially open-ended process, undertaken from a variety of different regional perspectives with varied composite agenda. She shuns traditional, deterministic explanations that notorious Balkan hatreds or any other kind of exceptionalism are to blame for Yugoslavia's demise, and along the way she highlights the agency of twentieth-century modern mass society in the politicization of differences. While analyzing nuanced political and social-economic processes, Calic describes the experiences and emotions of ordinary people in a vivid way. As a result, her groundbreaking work provides scholars and learned readers alike with an accessible, trenchant, and authoritative introduction to Yugoslavia's complex history.

This book adopts a corpus-based discourse analysis approach to the

study of the communicative practices of pick-up artists, offering a systematic exploration of distinct language use in an online community that uses speed-seduction practices for short-term dating and sex. Drawing on a multi-million-word corpus comprising data from online forums, social media, informational websites, and YouTube videos, the volume explores the verbal practices and narrative framing techniques that pick-up artists (PUAs) draw upon in their interactions with women and the terminology-heavy language used in teaching pick-up to foster perceptions of scientific validity. The book also unpacks videos and reports of live interactions to study naturally occurring PUA discourse from different perspectives but also to more closely examine conceptual metaphors of competition and violence and critically reflect on the ethical considerations of working with such communities. This book will appeal to students and scholars in such disciplines as discourse analysis, corpus linguistics, computer-mediated communication, and language and media,

as well as those interested in the study of language use online.

While currently identitarian ideologies and essentialist notions of identity that tend to simplify and reduce life experience to simple factors are globally regaining massive attention, it becomes inevitable to recollect the thorough discussions of identity concepts of the past three decades. It also calls for an ever keener awareness of and capacity to deal with the complexity and diversity of the world we live in. Artists play a major role in the potential reflection and transformation of perceptions and conceptions of the world – musicians, dancers, choreographers, spoken word artists, performance artists, actors, also fine art, installation, media artists or photographers

alike. "Performing critical identity" points to performative practices of artists that bring to the fore a critical (self-)awareness and (self-)positioning concerning identification and belonging. Social identities such as gender, sexuality, race, class, dis/ability, age or non/religiosity are closely linked to the historical, social, regional and political dimensions of their formation. From this perspective, identities are hardly one-dimensional but complex and intersectional, and are rather to be thought of as a process of identification and belonging than as a consistent essence. As different, maybe contradictory among themselves, as they are, the performative works of artists such as Lerato Shadi, Liad Hussein Kantorowicz, Nora Chipaumire, Shu Lea Cheang, Zanele Muholi, Ohno Kazuo, Anohni Hegarty, Neo Hülcker, "We're Muslim. Don't Panic" or of theatre collectives such as RambaZamba and Thikwa Theater in Berlin or Theater Hora in Zurich, to name but a very small quite random selection of artists, share a critical approach towards

hegemonic norms or stereotyping of identities and their representations, and empower diversity. This edition puts a specific focus on the performativity of the aesthetic practices, and wants to explore different artistic approaches, strategies, tactics and perspectives of artists when they address identity issues, when they target power relations and structures of oppression and inequality, when they empower concepts of diversity. This Call for Papers invites academic as well as artistic contributions that delve into case studies of artists performing critical identity or into more general theoretical reflections on the subject. Contributions can relate to, but are not limited to following topics:

- intersectionality - subversion - (self-)empowerment - resistance - subalternity - exploitation - manipulation - (anti-)feminism - appropriation - cultural globalisation - transculturality - hybrid identities - collectives - body - stage - audience - de-/construction of the difference of aesthetic genres and of high/popular culture - capitalism - colonialism - (re-)production of

In 1941, Henry Miller, the author of *Tropic of Cancer*, was commissioned by a Los Angeles bookseller to write an erotic novel for a dollar a page. Under the *Roofs of Paris* (originally published as *Opus Pistorum*) is that book. Here one finds Miller's characteristic candor, wit, self-mockery, and celebration of the good life. From Marcelle to Tania, to Alexandra, to Anna, and from the Left Bank to Pigalle, Miller sweeps us up in his odyssey in search of the perfect job, the perfect woman, and the perfect experience.

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral

psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

This book presents a rich compilation of real-world cases on digitalization,

aiming to share first-hand insights from renowned organizations and to make digitalization tangible. With all economic and societal sectors being challenged by emerging technologies, the digital economy is highly volatile, uncertain, complex, and ambiguous. It confronts established organizations with substantial challenges and opportunities. Against this backdrop, this book reports on best practices and lessons learned from organizations that succeeded in tackling the challenges and seizing the opportunities of the digital economy. It illustrates how twenty organizations leveraged their capabilities to create disruptive innovation, to develop digital business models, and to digitally transform themselves. These cases stem from various industries (e.g. automotive, insurance, consulting, and public services) and countries, covering the many facets that digitalization may have. As all case descriptions follow a unified template, they are easily accessible for readers and provide insightful examples for practitioners as well as interesting cases for researchers, teachers,

and students. Almost every organization is trying to figure out how best to respond to the opportunities and threats posed by digitalization. This book provides valuable lessons from those organizations that have already begun their digital transformation journey. Michael D. Myers, Professor of Information Systems, University of Auckland Digitalization Cases provides firsthand insights into the efforts of renowned companies. The presented actions, results, and lessons learned are a great inspiration for managers, students, and academics. This book gives real pointers on the how and where to start. Anna Kopp, Head of IT Germany, Microsoft The cases compiled in the second volume of Digitalization Cases show how disruption can actively be managed. Further, long-term insights from extended success stories of the first edition highlight that courage to change pays off well. This book represents a motivation for organizations to drive their digital transformation journeys actively. Markus Richter, State Secretary at the Federal Ministry of the Interior, Building and

This book focuses on fluxes of energy, carbon dioxide and matter in and above a Central European spruce forest. The transition from a forest affected by acid rain into a heterogeneous forest occurred as a result of wind throw, bark beetles and climate change. Scientific results obtained over the last 20 years at the FLUXNET site DE-Bay (Waldstein-Weidenbrunnen) are shown together with methods developed at the site, including the application of footprint models for data-quality analysis, the coupling between the trunk space and the atmosphere, the importance of the Damköhler number for trace gas studies, and the turbulent conditions at a forest edge. In addition to the many experimental studies, the book also applies model studies such as higher-order closure models, Large-Eddy Simulations, and runoff models for the catchment and compares them with the

experimental data. Moreover, by highlighting processes in the atmosphere it offers insights into the functioning of the ecosystem as a whole. It is of interest to ecologists, micrometeorologists and ecosystem modelers.

Probabilistic models have much to offer to philosophy. We continually receive information from a variety of sources: from our senses, from witnesses, from scientific instruments. When considering whether we should believe this information, we assess whether the sources are independent, how reliable they are, and how plausible and coherent the information is. Bovens and Hartmann provide a systematic Bayesian

account of these features of reasoning. Simple Bayesian Networks allow us to model alternative assumptions about the nature of the information sources. Measurement of the coherence of information is a controversial matter: arguably, the more coherent a set of information is, the more confident we may be that its content is true, other things being equal. The authors offer a new treatment of coherence which respects this claim and shows its relevance to scientific theory choice. Bovens and Hartmann apply this methodology to a wide range of much discussed issues regarding evidence, testimony, scientific theories, and voting. Bayesian Epistemology is an essential tool for anyone working on probabilistic methods in philosophy, and has broad implications for many other disciplines.

Justine was an early work of the Marquis de Sade written while imprisoned in the Bastille. It contains relatively little of the obscenity which characterized his later

writing. Napoleon Bonaparte called Justine "the most abominable book ever engendered by the most depraved imagination." Bonaparte ordered the arrest of Sade who as a result was incarcerated for the last 13 years of his life.
