Lexical research plays a central role in present-day linguistics. Thanks to its ability to combine the traditional humanistic approach with state-of-the-art linguistic theory, it quickly responds to the demands of a constantly changing society, which requires scholars to provide answers to challenges in the field of translation, language teaching and language use. Furthermore, while still dealing with areas like legal language or dictionaries, the parameters of research have expanded to include previously unforeseeable fields, such as video game terminology, code mixing in pop music or the translation of erotic literature. This book shows how researchers are currently responding to these challenges, with a collection of essays representing various aspects of lexicography, combining cutting-edge research with a user-friendly approach. Divided into four major sections (Lexical Theory and Acquisition; Legal Terminology; Dictionaries; and New Challenges), it proves that lexicology, lexicography and terminology are very much at the forefront of current research trends.

This edited book brings together a collection of perspectives and studies on the role and potential uses of vocabulary assessment in second and foreign language learners' needs analysis. Assessing what vocabulary a student already knows - and what therefore might be a realistic goal for language learning - is an essential aspect of developing and delivering effective foreign language classes. The chapters in this book address what has so far been an under-researched aspect of classroom needs analysis, exploring the influence of vocabulary tests, the lexical profiles of teaching materials, and learner as well as teacher beliefs and practices. This book will be of interest to students and scholars of applied linguistics and TESOL, language teachers and teacher trainers, and educators engaged in assessment and evaluation.

Issues in Materials Development provides readers with theoretical foundations and practical aspects of designing materials for EFL/ESL contexts. It starts with discussing some basic and preliminary principles of materials design followed by scrutinizing critical issues in materials development in an objective and systematic way. This ranges from considering learners' needs, adopting, adapting, selection, and gradation of materials to the specific focus of the book on developing various types of materials for the four language skills, pronunciation, ESP vocabulary, and computer assisted language learning materials. Authenticity of materials to be designed and the inclusion of affective factors to develop motivating materials to engage language learners, in addition to features of materials design at a universal level are other areas to read about. This book finally tries to open new horizons and possible futuristic approaches to improve today's ELT materials.

**The Vocabulary-learning Strategies of Foreign Language Students** Springer

This volume examines the area of second language vocabulary studies from three broad perspectives: description, acquisition and pedagogical context. The book's fifteen chapters are grouped together to achieve a balance between descriptions of what vocabulary is and how it behaves, how the mind learns new vocabulary and then uses it when it is learned, and pedagogical issues of teaching and testing L2 vocabulary. Some of the specific topics addressed in these three general areas include: - word

frequency and vocabulary size, multi-word units, variation between spoken and written language; - models of lexical acquisition, first language influences on second language vocabulary acquisition, vocabulary learning strategies; - vocabulary and the syllabus, trends in teaching and testing vocabulary, lexical reference sources.

**ESP Vocabulary Learning Strategies** Springer

English for Specific Purposes (ESP) has accumulated substantial tradition in practice, research and theory. It is a common approach in English Language Teaching (ELT) among adults today, starting with high schools, then in academia, pre and in-service training, and life-long learning programs. The role of ESP in each of these is to facilitate work in today's inevitably international business and scientific environment. It provides language training based on the precise simulation of communicative situations found in the surroundings for which learners are preparing, including, for example, domain specific vocabulary, syntactic and morphological structures, text and speech content structuring, stylistics, intercultural competence. At present, when English is present either as a foreign or second language, learning General English (GE) is to a large degree accomplished before learners start needing English for their jobs. In this way, ESP does not complete GE, but builds upon the foundations laid by it in learners' prior education. ESP is a channel of communication for the contemporary academia and economics. However, even so, these are still early days for ESP, as it does not yet have a recognised place within academia. Only very recently have we begun to witness the occasional but encouraging emergence of ESP academic courses and departments. This book thus explores practice and research conducted and under way in this field of ELT in order to assist its recognition as an autonomous academic discipline.

With the unrelenting spread of globalization, the English language has been firmly established as the Lingua Franca. Now more than ever, the importance of learning English is paramount within nearly all professional and educational sectors. English for Specific Purposes (ESP) has long been accepted as an effective method for teaching English as a foreign language. In recent years, it has experienced an increasing presence in secondary and tertiary education across the globe. This is predominantly due to its learner-centered approach that focuses on developing linguistic competence in the student's specific discipline, may that be academics, business or tourism, for example. Positioning English for Specific Purposes in an English Language Teaching Context attempts to present and define the relevance and scope of ESP within English Language teaching. From mobile phones as educational tools to the language needs of medical students, the contributors to this volume examine and propose different epistemological and methodological aspects of ESP teaching. Its unique approach to ESP marks this volume out as an important and necessary contribution to existing ESP literature, and one that will be of use to both researchers and practitioners of ESP.
