PEP for Winners Carson-

This book disseminates
original research on

learning in and from
practice in pre-service
teacher education.
Authors such as
Lederman and Lederman
describe the student
teaching practicum (or
work-integrated learning
[WIL]), which is an
essential component of
pre-service teacher
education, as the
'elephant in the room'.
These authors note that
'the capstone experience
in any teacher education
programme is the student
teaching practicum...
[a]fter all, this is where
the rubber hits the road'.

However, many teacher
educators will agree that
this WIL component is
sometimes very
insufficient in assisting
the student teacher to
develop their own footing
and voice as a teacher.
This is the 'gap' that this
research book addresses.
Most of the chapters in
the book report empirical
data, with the exception
of two chapters that can
be categorized as
systematic reviews. WIL is
addressed from various
angles in the chapters.
Chapter 6 focuses on
research related to what

makes Finnish teacher education so effective, and in Chapter 4 researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open- and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where “safe spaces” or

laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in the field of pre-service teacher education. The target audience is scholars working in the fields of

pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book.

Exploring Mathematics

A number line is a line on which points correspond to numbers. Students use number lines when counting and skip counting, performing measuring activities, and adding and subtracting. Number lines are also used as the axes in coordinate graphing systems.
