OCONNOR KLEIN

Honeybees of Asia IWA Publishing
"To earn a degree, every doctoral candidate should go out to Harvard Square, find an audience, and explain his [or her] dissertation". Everett Mendelsohn's worldly advice to successive generations of students, whether apocryphal or real, has for over forty years spoken both to the essence of his scholarship, and to the role of the scholar. Possibly no one has done more to establish the history of the life sciences as a recognized university discipline in the United States, and to inspire a critical concern for the ways in which science and technology operate as central features of Western society. This book is both an act of homage and of commemoration to Professor Mendelsohn on his 70th birthday. As befits its subject, the work it presents is original, comparative, wide-ranging, and new. Since 1960, Everett Mendelsohn has been identified with Harvard University, and with its Department of the History of Science. Those that know him as a teacher, will also know him as a scholar. In 1968, he began- and after 30 years, has just bequeathed to others - the editorship of the *Journal of the History of Biology*, among the earliest and one of the most important publications in its field. At the same

time, he has been a pioneer in the social history and sociology of science. He has formed particularly close working relationships with colleagues in Sweden and Germany - as witnessed by his editorial presence in the *Sociology of Science Yearbook*.

Average Is Over BRILL

This book is purposefully styled as an introductory textbook on circular economy (CE) for the benefit of educators and students of universities. It provides comprehensive knowledge exemplified by practices from policy, education, R&D, innovation, design, production, waste management, business and financing around the world. The book covers sectors such as agriculture/food, packaging materials, build environment, textile, energy, and mobility to inspire the growth of circular business transformation. It aims to stimulate action among different stakeholders to drive CE transformation. It elaborates critical driving forces of CE including digital technologies; restorative innovations; business opportunities & sustainable business model; financing instruments, regulation

& assessment and experiential education programs. It connects a CE transformation for reaching the SDGs2030 and highlights youth leadership and entrepreneurship at all levels in driving the sustainability transformation.

8 Lectures in Dornach, Nov 26, 1923 to Dec 22, 1923 (CW 351) In 1923 Rudolf Steiner predicted the dire state of today's honeybee. He stated that, within fifty to eighty years, we would see the consequences of mechanizing the forces that had previously operated organically in the beehive. Such practices include breeding queen bees artificially. The fact that over sixty percent of the American honeybee population has died during the past ten years, and that this trend is continuing around the world, should make us aware of the importance of the issues discussed in these lectures. Steiner began this series of lectures on bees in response to a question from an audience of workers at the Goetheanum. From physical depictions of the daily activities of bees to the most elevated esoteric insights, these lectures describe the unconscious wisdom of the beehive and its connection to our experience of health, culture, and the cosmos. Bees is essential reading for anyone interested in understanding the true nature of the honeybee, as well as those who wish to heal the contemporary crisis of the beehive. Bees includes an essay by David Adams, "From Queen Bee to Social Sculpture: The Artistic Alchemy of Joseph Beuys." The art and social philosophy of Joseph Beuys (1921-1986) is among the most influential of the twentieth century. He was strongly influenced by Rudolf Steiner's lectures on bees. The elemental imagery and its relationship to human society played an important role

in Beuys's sculptures, drawings, installations, and performance art. Adams' essay on Beuys adds a whole new dimension to these lectures, generally considered to be directed more specifically to biodynamic methods and beekeeping. This volume consists of 8 lectures (of 15) from Mensch und Welt. Das Wirken des Geistes in der Natur. Über das Wesen der Bienen (GA 351).

Stem cells are the focus of intense interest from a growing, multidisciplinary community of investigators with new tools for isolating and characterizing these elusive cell types. This volume, which features contributions from many of the world's leading laboratories, provides a uniquely broad and authoritative basis for understanding the biology of stem cells and the current excitement about their potential for clinical exploitation. It is an essential work of reference for investigators in embryology, hematology, and neurobiology, and their potential for clinical exploitation. It is an essential work of reference for investigators in embryology, hematology, and neurobiology, and their collaborators in the emerging field of regenerative medicine.

This book provides an accessible comprehensive exploration of

phenomenological theory and research methods and is geared specifically to the needs of therapists and other health care professionals. An accessible exploration of an increasingly popular qualitative research methodology Explains phenomenological concepts and how they are applied to different stages of the research process and to topics relevant to therapy practice Provides practical examples throughout

Bees John Wiley & Sons

This book is a sound science report about the consequences of pesticides to nature, health and environment. The book shares essential insights into the use of pesticides in agriculture, discusses the politics, rhetoric and profits involved, addresses the potential health and ecological risks of pesticides in our daily lives, and debates possible solutions. Does sustainable agriculture exist, and is agriculture without pesticides possible at all? Moreover, the author gives insight into his scientific work, the set-up of the experiments, and also writes about his very own experiences with the media and press after publication of his studies. For many years, Johann G. Zaller, an ecologist at the University of Natural Resources and Life Sciences in Vienna, and his team, have been researching applied chemicals and their effects on the environment. Their findings, together with relevant literature and media reports, are presented in this book, which offers a unique resource for anyone who wants to know the nature and background of pesticides and how we come into contact with them in our daily lives. Ever ate an apple? Read this book!

Environment and Development in the Pacific Islands CSHL Press
Renowned economist and author of Big

Business Tyler Cowen brings a groundbreaking analysis of capitalism, the job market, and the growing gap between the one percent and minimum wage workers in this follow-up to the New York Times bestseller *The Great Stagnation*. The United States continues to mint more millionaires and billionaires than any country ever. Yet, since the great recession, three quarters of the jobs created here pay only marginally more than minimum wage. Why is there growth only at the top and the bottom? Economist and bestselling author Tyler Cowen explains that high earners are taking ever more advantage of machine intelligence and achieving ever-better results. Meanwhile, nearly every business sector relies less and less on manual labor, and that means a steady, secure life somewhere in the middle—average—is over. In *Average is Over*, Cowen lays out how the new economy works and identifies what workers and entrepreneurs young and old must do to thrive in this radically new economic landscape.

This book examines recent developments in river (flood) management from the viewpoint of *Making Space for the River* and the resulting challenges for water governance. Different examples from Europe and the United States of America

are discussed that aim to 'green' rivers, including increasing river discharge for flood management, enhancing natural and landscape values, promoting local or regional economic development, and urban regeneration. Making Space for the River presents not only opportunities and synergies but also risks as it crosses established institutional boundaries and touches on multiple stakeholder interests, which can easily clash. Making Space for the River helps the reader to understand the policy and governance dynamics that lead to these tensions and pays attention to a variety of attempts to organize effective and legitimate governance approaches. The book helps to realize connections between policy domains, problem frames, and goals of different actors at different levels that contribute to decisive and legitimate action. Making Space for the River has an international comparative character that sheds light upon both the country-specific governance dilemmas which relate to specific state traditions and institutional characteristics of national water management, but also uncovers interesting similarities which provide us with building blocks to formulate more generic lessons about the governance of Making Space for the River in different institutional and social contexts. The authors of this book come from a variety of disciplines including public administration, town and country planning, geography and anthropology, and these different disciplines bring multiple ways of knowing and understanding of Making Space for the River programs. The book combines interdisciplinary scientific analyses of Space for the River projects and programs with practical knowing and lessons-drawing. Making Space for the River is written for both practitioners and

scholars and students of environmental policy, spatial planning, land use and water management. Editors: Jeroen Warner, Assistant Professor of Disaster Studies, Wageningen University, The Netherlands. Arwin van Buuren, Associate Professor of Public Administration, Erasmus University Rotterdam, The Netherlands. Jurian Edelenbos, Professor of Public Administration, Erasmus University Rotterdam, The Netherlands.

Making Space for the River

Independently Published

This study of New German cinema identifies different styles of historical remembrance in which music participates. It concentrates on how listeners are urged to interact with difference - including Germany's difficult past - rather than try to 'master' or 'get past' it.

An Introduction to Circular Economy
Springer Science & Business Media

The Singer's Guide to German Diction is
the essential foundation for a complete
course in German diction for singers,
vocal coaches, choral conductors, and
anyone wishing to learn the proper
pronunciation of High German. Written
by Valentin Lanzrein and Richard Cross,
who each have years of experience on
stage, in the voice studio, and in the
diction classroom, it provides an all-
encompassing and versatile reference
for the rules of German diction and their
exceptions. Featuring an easily
navigable format that uses tables and
charts to support a visual understanding
of the text, this guide allows the reader
to find information on diction rules and
quick help with the formation of each
sound. It also places an emphasis on
exceptions to the rules, which are crucial
in learning the proper pronunciation of
any language. Exceptions are not only
provided with the diction rules, but are
also gathered in a specific section for
ease of reference. A glossary of difficult
words, names, and exceptions is
provided in the appendix, along with a
section on Latin pronounced in the
German manner. Extensive
pronunciation exercises, as well as IPA
transcription worksheets and short
examples from the vocal literature, are
used for practical application of the
diction rules, and feature musical
exercises drawn from art song, opera,
and oratorio. The book's companion

website supplements these musical exercises with high-quality audio clips recorded by leading professional singers, providing an invaluable resource for independent study. A comprehensive companion for teachers, students, and singers alike, *The Singer's Guide to German Diction* brings German diction to life through its well-structured system of practice and reference materials.

"Wildlife trafficking threatens the existence of many plant and animal species and accelerates the destruction of wildlife, forests, and other natural resources. It contributes to environmental degradation, destroys unique natural habitats, and deprives many countries and their populations of scarce renewable resources. Nevertheless, preventing and suppressing the illegal trade in wildlife, animal parts,

and plants is presently not a priority in many countries and it remains overlooked and poorly researched. The chapters included in this volume address causes, characteristics, and actors of wildlife trafficking, analyse detection methods, and explore different international and national legal frameworks." This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. All rights not granted by the work's license are retained by the author or authors.
