There is a wealth of research and  
literature explaining suburban sprawl and  
the urgent need to retrofit suburbia.  
However, until now there has been no  
single guide that directly explains how to  
repair typical sprawl elements. The Sprawl  
Repair Manual demonstrates a step-by-  
step design process for the re-balancing  
and re-urbanization of suburbia into more  
sustainable, economical, energy- and  
resource-efficient patterns, from the  
region and the community to the block  
and the individual building. As Galina  
Tachieva asserts in this exceptionally  
useful book, sprawl repair will require a

proactive and aggressive approach, focused on design, regulation and incentives. The Sprawl Repair Manual is a much-needed, single-volume reference for fixing sprawl, incorporating changes into the regulatory system, and implementing repairs through incentives and permitting strategies. This manual specifies the expertise that's needed and details the techniques and algorithms of sprawl repair within the context of reducing the financial and ecological footprint of urban growth. The Sprawl Repair Manual draws on more than two decades of practical experience in the field of repairing and building communities to analyze the current pattern of sprawl development, disassemble it into its elemental components, and present a process for

transforming them into human-scale, sustainable elements. The techniques are illustrated both two- and three-dimensionally, providing users with clear methodologies for the sprawl repair interventions, some of which are radical, but all of which will produce positive results.
