L'U.R.S.S. Aujourd'hui et Demain

The Illustrated Queen Almanac and Lady's Calendar Elsevier

This major collection of essays on 18th century French literature in relation to Enlightenment culture includes the subjects of medicine, the art of conversation, devotional writing, gastronomy, divorce, and the Revolution.

The Canada Year Book Intl Food Policy Res Inst

Explicating clearly and concisely the full implication of a praxis-oriented language pedagogy, this book argues for an approach to language teaching grounded in a significant scientific theory of human learning—a stance that rejects the consumer approach to theory and the dichotomy between theory and practice that dominates SLA and language teaching. This approach is based on Vygotsky's sociocultural theory, according to which the two activities are inherently connected so that each is necessarily rooted in the other; practice is the research laboratory where the theory is tested. From the perspective of language education, this is what is meant by the 'pedagogical imperative.' Sociocultural Theory and the Pedagogical Imperative in L2 Education • Elaborates a new approach to dealing with the relationship between theory and practice—an approach grounded in praxis—the dialectical unity of theory and practice • Presents an analysis of empirical research illustrating praxis-based principles in real language classrooms • Brings together cognitive

linguistics and sociocultural theory – the former provides the theoretical knowledge of language required of praxis and the latter furnishes the theoretical principles of learning and development also called for in a praxis approach • Offers recommendations for redesigning teacher education programs Its timely focus on the theory-practice gap in language education and its original approach to bridging it put this book at the cutting edge of thinking about Vygotskian sociocultural theory in applied linguistics and SLA.

Heath's Practical French Grammar Univ. Press of Mississippi

Progress in Refrigeration Science and Technology, Volume II is a collection of papers from the Eleventh International Congress of Refrigeration held in Munich in August-September 1963. These papers deal with the various scientific and technical aspects, designs, and technology of refrigeration used in food, as well as advances in air-conditioning, and heat pumps. One paper discusses the refrigeration of meat, fruit, or vegetables, and the reaction rate of proteolysis in low temperatures. The paper points out that meat preservation by freezing is not economical below 60 degrees centigrade citing the reason that cathepsins are still catalytically active in lower temperatures. Other papers discuss the effects of freezing of beef, pork, turkey, chicken, sweet corn, spinach puree. As regards fruit and vegetable storage, the air needs to be purified to inhibit infections, retard fungal or bacterial growth, and dissipate ripening gases or foul odors. Another paper examines the reasons for doing away with floor insulation in refrigeration plants used in storing fresh meat during the summer and winter months. This collection is suitable for engineers in the

area of refrigeration, and also for food technologists involved in food research and preservation.

Agriculture, Ancient and Modern: a Historical Account of Its Principles and Practice, Exemplified in Their Rise, Progress, and Development Elsevier

The Dictionary of Louisiana French (DLF) provides the richest inventory of French vocabulary in Louisiana and reflects precisely the speech of the period from 1930 to the present. This dictionary describes the current usage of French-speaking peoples in the five broad regions of South Louisiana: the coastal marshes, the banks of the Mississippi River, the central area, the north, and the western prairie. Data were collected during interviews from at least five persons in each of twenty-four areas in these regions. In addition to the data collected from fieldwork, the dictionary contains material compiled from existing lexical inventories, from texts published after 1930, and from archival recordings. The new authoritative resource, the DLF not only contains the largest number of words and expressions but also provides the most complete information available for each entry. Entries include the word in the conventional French spelling, the pronunciation (including attested variants), the part of speech classification, the English equivalent, and the word's use in common phrases. The DLF features a wealth of illustrative examples derived from fieldwork and textual sources and identification of the parish where the entry was collected or the source from which it was compiled. An English-to-Louisiana French index enables readers to find out how particular notions would be expressed in la Louisiane.

Bibliographic Guide to Refrigeration 1965-1968 is a bibliographic guide to all the documents abstracted in the International Institute of Refrigeration Bulletin during the period 1965-1968. The references include nearly 7,000 reports, articles, and communications, classified according to subjects, and followed by a listing of books. This book is divided into 10 parts and begins with a listing of references on thermodynamics, heat transfer, and other basic physical phenomena relating to refrigeration, including desiccation and measurements of temperature, humidity, and pressure. The next sections are devoted to the physics of low temperatures and cryogenics; production and distribution of cold; refrigerating plants (mainly in the food domain); and refrigerated transport and packaging. Other references deal with air conditioning and heat pumps; and industrial, biological, medical, and agricultural applications of refrigeration. The final section focuses on standards and regulations, economics and statistics, and education and trade activities in the refrigeration industry. This guide is intended to assist researchers, engineers, manufacturers, and operators who are in either constant or occasional contact with the refrigeration domain.
