The world has changed radically since 1989, when the General Assembly declared the period from 1990 to 1999 as the United Nations Decade of International

Law. During that time, the international community claimed some major achievements as reflected by the adoption of conventions and treaties. This publication presents a collection of essays

from legal advisers of States and international organizations, all of whom are among those committed to promoting respect for international law. Their contribution provides a practical perspective on international law, viewed from the standpoint of those involved in its formation, application and administration. *1.-2. Supplément. 1877-90 IUCN*
This atlas aims to present sound approaches to maturity sampling for a wide range of Mediterranean species – including bony fish, cartilaginous fish, both oviparous and viviparous, crustaceans and cephalopods – based on an accurate determination of the different maturity stages. It includes macroscopic photos of gonads belonging to the main species and, for some, a validation-based histological analysis.

TESORO DE LAS DOS LENGUAS, ESPAÑOLA Y FRANCESA Bernan Assoc IUCN's Protected Areas Management Categories, which classify protected areas according to their management objectives, are today accepted as the benchmark for defining, recording, and classifying protected areas. They are recognized by international bodies such as the United

Nations as well as many national governments. As a result, they are increasingly being incorporated into government legislation. These guidelines provide as much clarity as possible regarding the meaning and application of the Categories. They describe the definition of the Categories and discuss application in particular biomes and management approaches.

Questions d'histoire; le Comité Central et la Commune DIANE Publishing

The second volume of the Scientific Committee's report adds five more annexes to the five in volume one. They cover DNA repair and mutagenesis; biological effects at low radiation doses; combined effects of radiation and other agents; epidemiological evaluation of radiation-induced cancer; and exposures and effects of the Chernobyl accident. Each ends with an impressive number of references. Annotation copyrighted by Book News, Inc., Portland, OR
