From the 18th century to the 20th, this book gives a panorama of Russian painting not equalled anywhere else. Russian culture developed in contact with the wider European influence, but retained strong native intonations. It is a culture between East and West, and both influences in together. The book begins

with Icons, and it is precisely Icon-painting which gave Russian artist their peculiar preoccupation with ethical questions and a certain kind of palette. It goes on to expound the duality of their art, and point out the originality of their contribution to world art. The illustrations cover all genres and styles of painting in astonishing variety. Such figures as Borovokovsky, Rokotov, Levitsky, Brullov, Fedatov, Repin, Shishkin and Levitan and many more are in these pages.

Pharmacology education in nursing has become increasingly important as nurses' roles in administering, prescribing and educating patients about their medications have grown. Nurses are the last barrier between any particular drug and patient. This is why it is so important to be knowledgeable when it comes to drug uses, doses, side effects, and contraindications. In addition to the obvious benefit of protecting our

patients and fulfilling our oath to do no harm, it benefits all nurses to know and be well versed in the drugs they are administering in order to protect themselves and their nursing licenses.
