 The field of lexicography is undergoing a major revolution. The rapid replacement of the traditional paper dictionary by electronic dictionaries opens up exciting possibilities but also constitutes a major challenge to the field. The eLexicography in the 21st Century: New Challenges, New Applications conference organized by the Centre for English Corpus Linguistics of the Université catholique de Louvain in October 2009 aimed to bring together the many researchers around the world who are working in the fast developing field of electronic lexicography and to act as a showcase for the latest lexicographic developments and software solutions in the field. The conference attracted both academics and industrial partners from 30 different countries who presented electronic dictionary projects dealing with no less than 22 languages. The resulting proceedings volume bears witness to the tremendous vitality and diversity of research in the field. The volume covers a wide range span of topics, including: -

the use of language resources for lexicographic purposes, in the form of lexical databases like WordNet or corpora of different types - innovative changes to the dictionary structure afforded by the electronic medium, in particular multiple access routes and efficient integration of phraseology -specialised dictionaries (e.g. SMS dictionaries, sign language dictionaries) -automated customisation of dictionaries in function of users' needs - exploitation of Natural Language Processing tools - integration of electronic dictionaries into language learning and teaching
Electronic Lexicography Routledge
 This book is the first comprehensive monograph on the Function Theory of Lexicography, which originated at the Aarhus School of Business (Aarhus University). Function Theory considers dictionaries to be tools that are constructed for assisting specific users with punctual needs in specific usage situations, e.g. communicative-oriented situations and cognitive-oriented situations. The book's main focus is on defending the independent academic status of lexicography and its corollary: The process of designing, compiling and updating (specialised) online dictionaries needs a theoretical framework that addresses general and specific aspects. The former are common to all types

of information tools, the latter are mainly dependent on the media for which the information tool is constructed and their specific target users. This book offers both aspects and moves from the highest level of abstraction to very detailed aspects of lexicographic work, e.g. how to convert an originally-conceived polyfunctional online dictionary into several monofunctional usage-based ones. The book illustrates that the theory and the methodology currently used by advocates of the Function Theory of Lexicography offers better results than other approaches and therefore makes its case for proposing the Function Theory for terminological/terminographical work.

This book describes the authors' standard or 'best' practices used in writing regulated clinical documents for the drug and biologics industry. The fundamental premise of this book is that the end (documents submitted to a health authority) is dependent on the beginning (the planning and strategy that go into organizing written documentation). Each regulatory document inherently exists within a constellation of related documents. This book attempts to show the relationships between and among these documents and suggests strategies for organizing and writing these documents to maximize efficiency while developing clear and concise text. At all times, and irrespective of applicable laws and guidelines, good communication skills and a sense of balance are essential to adequately, accurately, and clearly describe a product's characteristics. At no time should the reader perceive these suggestions to be the only viable solution to writing regulatory documents nor should the reader expect that these suggestions guarantee product success. The audience for this book is the novice medical writer, or those who would like to explore or enhance regulatory-writing skills. We assume the reader will have a basic understanding of written communication, but little experience in applying this skill to the task of regulatory writing. Extensive knowledge of science, clinical medicine, mathematics, or regulatory affairs law is not required to use the best practices described in this book.

E Lexicography in the 21st Century : New Challenges, New Applications Laurence King

Until now, there has been very little research into the use of online dictionaries. In contrast, the market for online dictionaries is increasing both for academic lexicography and for commercial lexicography, with sales figures for printed reference works in continual decline. This has led to a demand for reliable empirical information on how online dictionaries are actually being used and how they could be made more user-friendly. The volume *Using Online Dictionaries* makes a substantial contribution to closing this research gap. It is divided into four parts: The first part contains articles on fundamental issues: a research review of the empirical studies on digital dictionaries which have already been carried out, and a brief methodological guideline for lexicographical researchers who are interested in conducting their own empirical research. The second part contains the results of two studies that focus on general questions about the use of online dictionaries. It presents empirical data on contexts of dictionary use, on expectations and demands regarding online dictionaries. Furthermore, innovative features, such as the use of multimedia elements or the option of a user-adaptive interface and questions of design were assessed empirically. The third part of this volume comprises more specific studies of online dictionaries: an eye-tracking study evaluating the new web design of the dictionary portal OWID and a log file study which tries to get to the bottom of the following question: Do dictionary users look up frequent words, or put differently, is there a connection between how often a word is looked up and how often

it appears in a corpus? In the last chapter of this thematic section, the question of how users judge the combination of a written paraphrase and an additional illustration in illustrated online dictionaries is addressed. The last part focuses on the use of monolingual dictionaries, in particular the German online dictionary *lexiko*. In this context, two online questionnaire-based studies were carried out. The empirical studies were conducted in the form of online surveys combining questionnaires and experimental elements and in the form of laboratory studies using eye-tracking technology as well as using observational methods such as log file analyses. Regarding the comprehensive research framework, this volume can be relevant to lexicographers, metalexicographers and linguists who are interested in the use of (online) dictionaries and in the development and exploration of lexicographical data for the internet, as well as linguists interested in empirical methods. It addresses a broad expert audience by presenting an academic subject which is currently the focus of much discussion.

Digital Papyrology I Walter de Gruyter GmbH & Co KG

Since the very beginnings of the digital humanities, Papyrology has been in the vanguard of the application of information technologies to its own scientific purposes, for both theoretical and practical reasons (the strong awareness towards the problems of human memory and the material ways of preserving it; the need to work with a multifarious and overwhelming amount of different data). After more than thirty years of development, we have now at our disposal the most advanced tools to make papyrological studies more and more effective, and even to create a new conception of "papyrology" and a new model of "edition" of the ancient documents. At this turning point, it is important to build an epistemological framework including all the different expressions of Digital Papyrology, to trace a historical sketch setting the background of the contemporary tools, and to provide a clear overview of the current theoretical and technological trends, so that all the possibilities currently available can be exploited following uniform pathways. The volume represents an innovative attempt to deal with such topics, usually relegated into very quick and general treatments within journal articles or papyrological handbooks.

Manual of lexicography Oxford University Press

This book looks at current research and future directions in e-lexicography. Online dictionaries and reference tools are increasingly prevalent in a digitized and internet-led era in language study that has embraced computational linguistics. This book responds with theoretical and practical analysis of key topics, from a global range of contributors. Since COBUILD in the 1980s, lexicographers have found it essential to engage with and utilize electronic computational tools. Internet dictionaries, online reference tools and even search engine optimization demand a knowledge of electronic lexicography and force a reassessment of the field. This volume looks at, amongst other topics: • Polyfunctional versus monofunctional dictionary tools • Developing theories of lexicography for electronic mediums • Distinguishing between the database and the dictionary • Online dictionaries not as data repositories but as sophisticated search engines This volume will appeal to scholars in lexicography and to practicing lexicographers.

The Greek and Jewish diasporas are the most significant diasporas of Western civilisation. "Homelands and Diasporas" is the first book to explore the similarities and differences between these two experiences. In the process it sheds fascinating light on their fundamental importance for both Greek and Jewish societies. The authors examine Greek and Jewish diasporas throughout history, from classical and Biblical times to the present, and all over the world - in Greece, the Balkans, Turkey, Russia, the Near and Middle East, Spain and the US. They analyse the very nature of diaspora, examining both the Greek concept of noble expansion and the Jewish idea of enforced exile, and analyse community structures as well as social and religious networks, combining Scriptural analysis with cultural and political history. Diaspora is a difficult and emotive concept but "Homelands and Diasporas" offers a balanced and perceptive guide to the connected histories of these two peoples away from their homelands.

Theory and Practice of Specialised Online Dictionaries Routledge

This is a book about the teaching and particularly the acquisition of translation-related skills and knowledge. Well grounded in theory, the book also provides numerous examples drawn from the author's extensive classroom experience in translator education and foreign language teaching. Kiraly uses a number of classroom case studies to illustrate his method, including: introductory courses in translation studies, project-based translation practice courses, translation studies seminars, as well as naturalistic foreign language learning classes for student translators. The book is primarily geared toward translator educators and programme administrators, as well as students of translation, and will also be of interest to foreign language teachers who incorporate translation into their teaching, to translation scholars, and to others involved in the world of translation.
