From the best-selling author of *These Truths*, an “exhilarating” (New York Times Book Review) account of the Cold War origins of our data-mad era. The

Simulmatics Corporation, founded in 1959, mined data, targeted voters, accelerated news, manipulated consumers, destabilized politics, and disordered knowledge—decades before Facebook, Amazon, and Cambridge Analytica. Although Silicon Valley likes to imagine that it has no past, the scientists of Simulmatics are almost undoubtedly the long-dead ancestors of Mark Zuckerberg and Elon Musk—or so argues Jill Lepore, distinguished Harvard historian and New Yorker staff writer, in this “hilarious, scathing, and sobering” (David Runciman) account of the origins of predictive analytics and behavioral data science.

From the former news policy lead at Google, an “informative and often harrowing wake-up call” (Publishers Weekly) that explains the high-stakes global cyberwar brewing between Western democracies and the authoritarian regimes of China and Russia that could potentially crush democracy. From 2016 to 2020, Jacob Helberg led Google’s global internal product policy efforts to combat disinformation and foreign interference. During this time, he found himself in the midst of what can only be described as a

quickly escalating two-front technology cold war between democracy and autocracy. On the front-end, we’re fighting to control the software—applications, news information, social media platforms, and more—of what we see on the screens of our computers, tablets, and phones, a clash which started out primarily with Russia but now increasingly includes China and Iran. Even more ominously, we’re also engaged in a hidden back-end battle—largely with China—to control the internet’s hardware, which includes devices like cellular phones, satellites, fiber-optic cables, and 5G networks. This tech-fueled war will shape the world’s balance of power for the coming century as autocracies exploit 21st-century methods to redivide the world into 20th-

century-style spheres of influence. Without a firm partnership with the government, Silicon Valley is unable to protect democracy from the autocrats looking to sabotage it from Beijing to Moscow and Tehran. Helberg offers “unnervingly convincing evidence that time is running out in the ‘gray war’ with the enemies of freedom” (Kirkus Reviews) which could affect every meaningful aspect of our lives, including our economy, our infrastructure, our national security, and ultimately, our national sovereignty.

This major text by the author of Mass Communication Theory offers a comprehensive analysis of the growing field of assessment and evaluation of the

performance of mass media. Across different societies, with varying media systems, there is evidence of increasing concern with the nature and quality of media output as well as about the independence and diversity of media systems. In this broad-ranging overview, Denis McQuail outlines the varying means of media performance assessment which have been attempted. He analyzes the central questions of what the ‘public interest’ means in this context, which criteria are relevant for assessing media performance, how such values are established and how they can be reconciled with the economic, *Industrial Designer Log* World Health Organization

While the Mediterranean is often considered a distinct, unified space, recent scholarship on the early modern history of the sea has suggested that this perspective is essentially a Western one, devised from the vantage point of imperial power that historically patrolled the region's seas and controlled its ports. By contrast, for the peoples of its southern shores, the Mediterranean was polymorphous, shifting with the economic and seafaring exigencies of

the moment. Nonetheless, by the nineteenth century the idea of a monolithic Mediterranean had either been absorbed by or imposed on the populations of the region. In French Mediterraneans editors Patricia M. E. Lorcin and Todd Shepard offer a collection of scholarship that reveals the important French element in the nineteenth- and twentieth-century creation of the singular Mediterranean. These essays provide a critical study of space and movement through new approaches to think about the maps, migrations, and margins of the sea in the French imperial and transnational context. By reconceptualizing the Mediterranean, this volume illuminates the diversity of connections between places and polities that rarely fit models

of nation-state allegiances or preordained geographies.

 "The World Health Report: research for universal health coverage" focuses on the importance of research in advancing

progress towards universal health coverage. In addition, it identifies the benefits of increased investment in health research by low- and middle-income countries using case studies from around the world, and proposes ways to further strengthen this type of research.

Millions of young people-and increasingly some not-so-young people-now work as interns. They famously shuttle coffee in a thousand magazine offices, legislative backrooms, and Hollywood studios, but they also deliver aid in Afghanistan, map the human genome, and pick up garbage. Intern Nation is the first exposé of the exploitative world of internships. In this witty, astonishing, and serious investigative work, Ross Perlin profiles

fellow interns, talks to academics and professionals about what unleashed this phenomenon, and explains why the intern boom is perverting workplace practices around the world. The hardcover publication of this book precipitated a torrent of media coverage in the US and UK, and Perlin has added an entirely new afterword describing the growing focus on this woefully underreported story. Insightful and humorous, Intern Nation will transform the way we think about the culture of work.

Sustainability in Denim provides the latest information on sustainable fabrics and practices. From cotton farming, to manufacture and end of life disposal, denim has extensive effects on the environment, inclusive of water consumption and contamination, destruction of large-scale ecosystems and transportation pollution.

Additionally, recent developments in the manufacture of denim, such as the use of textiles, including elastane and

polyester, have led to limitations in the high end recycling of denim. This book includes an introduction covering the history, manufacture and lifecycle of denim. It deals with the sustainability aspects of denim by addressing three important pillars of sustainability, the environmental, social and economic aspects, that when combined, present a unique approach in comparison to other books on the topic. The book primarily uses case studies to examine sustainability challenges throughout the denim lifecycle, and to evaluate new green initiatives and recycling processes. It will be of great use to industry professionals, sustainability managers, textile industry researchers and denim manufacturers. Reviews and studies denim from a sustainability

perspective, addressing its major environmental, social and economic impacts Provides the reader with a fundamental knowledge of the history, manufacture and lifecycle of denim, thus enabling a holistic view of denim sustainability Presents new green initiatives for the processing and recycling of denim products for promotion and use amongst sustainability groups

Experiential learning is a powerful and proven approach to teaching and learning that is based on one incontrovertible reality: people learn best through experience. Now, in this

extensively updated book, David A. Kolb offers a systematic and up-to-date statement of the theory of experiential learning and its modern applications to education, work, and adult development. *Experiential Learning, Second Edition* builds on the intellectual origins of experiential learning as defined by figures such as John Dewey, Kurt Lewin, Jean Piaget, and L.S. Vygotsky, while also reflecting three full decades of research and practice since the classic first edition. Kolb models the underlying structures of the learning process based on the latest insights in psychology, philosophy, and physiology. Building on his comprehensive structural model, he offers an exceptionally useful typology of individual learning styles and corresponding structures of knowledge

in different academic disciplines and careers. Kolb also applies experiential learning to higher education and lifelong learning, especially with regard to adult education. This edition reviews recent applications and uses of experiential learning, updates Kolb's framework to address the current organizational and educational landscape, and features current examples of experiential learning both in the field and in the classroom. It will be an indispensable resource for everyone who wants to promote more effective learning: in higher education, training, organizational development, lifelong learning environments, and online.
